Rational Consensus In Science And Society:

Rational Consensus in Science and Society Keith Lehrer, C. Wagner, 2012-12-06 This book is the joint project of a philosopher Lehrer and a mathematician Wagner. The book is therefore divided into a first part written by Lehrer which is primarily philosophical and a second part written by Wagner that is primarily formal. The authors were however influenced by each other throughout. Our book articulates a theory of rational consensus in science and society. The theory is applied to politics, ethics, science, and language. We begin our exposition with an elementary mathematical model of consensus developed by Lehrer in a series of articles (1976a, 1976b, 1977, 1978). Chapter 3 contains material from 1978. Lehrer formulated the elementary model when he was a Fellow of the Center for Advanced Study in the Behavioral Sciences, Stanford, in 1973, with the invaluable mathematical assistance of Kit Fine, Gerald Kramer, and Lionel McKenzie. In the summer of 1977, Lehrer and Wagner met at the Center in a Summer Seminar on Freedom and Causality supported by the Andrew W. Mellon Foundation. Wagner read the manuscript of Lehrer (1978) and subsequently solved some mathematical problems of the elementary model. After discussions of philosophical problems associated with that model, Wagner developed the foundations for the extended model. These results were reported in Wagner (1978, 1981a).

Expert Judgement in Risk and Decision Analysis Anca M. Hanea, Gabriela F. Nane, Tim Bedford, Simon French, 2021-02-19 This book pulls together many perspectives on the theory, methods, and practice of drawing judgments from panels of experts in assessing risks and making decisions in complex circumstances. The book is divided into four parts. Structured Expert Judgment (SEJ) current research fronts the contributions of Roger Cooke and the Classical Model he developed, process procedures, and education and applications. After an Introduction by the Editors, the first part presents chapters on expert elicitation of parameters of multinomial models, the advantages of using performance weighting by advancing the random expert hypothesis, expert elicitation for specific graphical models, modelling dependencies between experts' assessments within a Bayesian framework, preventive maintenance optimization in a Bayesian framework, eliciting life time distributions to parametrize a Dirichlet process, and on an adversarial risk analysis approach for structured expert judgment studies. The second part includes Roger Cooke's oration from 1995 on taking up his chair at Delft University of Technology, one of the editors' reflections on the early decade of the Classical Model development, and a current overview of the theory of the Classical Model, providing a deep and comprehensive perspective on its foundations and its application, and an interview with Roger Cooke. The third part starts with an interview with Professor Dame Anne Glover who served as the Chief Scientific Advisor to the President of the European Commission. It then presents chapters on the characteristics of good elicitations by reviewing those advocated and applied, the design and development of a training course for SEJ, and on specific experiences with SEJ protocols with the intention of presenting the challenges and insights collected during these journeys. Finally, the fourth and largest part begins with some reflections from Willy Aspinall on his many experiences in

applying the Classical Model in several application domains it continues with related reflections on imperfect elicitations and then it presents chapters with applications on medicines policy and management supply chain cyber risk management geo political risks terrorism and the risks facing businesses looking to internationalise

The Psychoanalytic Understanding of Consciousness, Free Will, Language, and Reason Robert Samuels,2023-05-08 The Psychoanalytic Understanding of Consciousness Free Will Language and Reason examines the ways in which we can use psychoanalysis in order to better understand humanity and explores the question of what makes us human For thousands of years thinkers have been trying to define what makes us human Some of the main questions they have asked is What is consciousness Do we have free will Do animals use language And what does reason mean Samuels argues that we need to better understand the psychoanalytic approach to human nature in order to answer these questions as well as using it to provide a new way of understanding issues such as addiction political conflict ideology and destructive personal relationship This book will be of vital interest to psychotherapists as well as students and researchers across the fields of psychoanalysis philosophy and psychology

Science Outside the Laboratory Marcel Boumans,2015-05-01 The conduct of most of social science occurs outside the laboratory Such studies in field science explore phenomena that cannot for practical technical or ethical reasons be explored under controlled conditions These phenomena cannot be fully isolated from their environment or investigated by manipulation or intervention Yet measurement including rigorous or clinical measurement does provide analysts with a sound basis for discerning what occurs under field conditions and why In *Science Outside the Laboratory* Marcel Boumans explores the state of measurement theory its reliability and the

role expert judgment plays in field investigations from the perspective of the philosophy of science Its discussion of the problems of passive observation the calculus of observation the two model problem and model based consensus uses illustrations drawn primarily from economics Rich in research and discussion the volume clarifies the extent to which measurement provides valid information about objects and events in field sciences but also has implications for measurement in the laboratory Scholars in the fields of philosophy of science social science and economics will find *Science Outside the Laboratory* a compelling and informative read

Reflective Democracy Robert E. Goodin, 2003-02-13 Democracy used to be seen as a relatively mechanical matter of merely adding up everyone's votes in free and fair elections That mechanistic model has many virtues among them allowing democracy to track the truth where purely factual issues are all that is at stake Political disputes invariably mix facts with values however and then it is essential to listen to what people are saying rather than merely note how they are voting The great challenge is how to implement that deliberative ideal among millions of people at once In this strikingly original book Goodin offers a solution democratic deliberation within Building on models of ordinary conversational dynamics he suggests that people simply imagine themselves in the position of various other people they have heard or read about and ask What would they say about this proposal Informing the democratic imaginary then becomes the key to making deliberations more reflective more empathetic more considered more expansive across time and distance Oxford Political Theory presents the best new work in contemporary political theory It is intended to be broad in scope including original contributions to political philosophy and also work in applied political theory The series contains works of outstanding quality with no restriction as to approach or subject matter

Contemporary Empirical Political Theory Kristen Renwick Monroe, 2023-11-10 How can we best understand the major debates and recent movements in contemporary empirical political theory In this volume the

contributors including four past presidents of the APSA and one past president of the IPSA present their views of the central core methodologies and development of empirical political science. Their disparate views of the unifying themes of the discipline reflect different theoretical orientations from behavioralism to rational choice, cultural theory to postmodernism and feminism to Marxism. Is there a human nature on which we can construct scientific theories of political life? What is the role of culture in shaping any such nature? How objective and value free can political theories be? These are only a few of the issues the volume addresses. By assessing where we have traveled intellectually as a discipline and asking what remains of lasting significance in the various theoretical approaches that have engulfed the profession, *Contemporary Empirical Political Theory* provides an important evaluation of the current state of empirical political theory and a valuable guide to future developments in political science.

Decision Theory with a Human Face, Richard Bradley, 2017-10-26. When making decisions, people naturally face uncertainty about the potential consequences of their actions, due in part to limits in their capacity to represent, evaluate, or deliberate. Nonetheless, they aim to make the best decisions possible. In *Decision Theory with a Human Face*, Richard Bradley develops new theories of agency and rational decision making, offering guidance on how real agents who are aware of their bounds should represent the uncertainty they face, how they should revise their opinions as a result of experience, and how they should make decisions when lacking full awareness of or precise opinions on relevant contingencies. He engages with the strengths and flaws of Bayesian reasoning and presents clear and comprehensive explorations of key issues in decision theory, from belief and desire to semantics and learning. His book draws on philosophy, economics, decision science, and psychology and will appeal to readers in all of these disciplines.

Social Epistemology, Alvin Goldman, Dennis Whitcomb, 2011-02-11. What if anything justifies us in believing the testimony of others? How should we react to disagreement between ourselves and our peers, and to disagreement among the experts when we ourselves are novices? Can beliefs be held by groups of people in addition to the people composing those groups? And if so, how should groups go about forming their beliefs? How should we design social systems, such as legal juries and scientific research sharing schemes, to promote knowledge among the people who engage in them? When different groups of people judge different beliefs to be justified, how can we tell which groups are correct? These questions are at the heart of the vital discipline of social epistemology. The classic articles in this volume address these questions in ways that are both cutting edge and easy to understand. This volume will be of great interest to scholars and
