Bayeh, 2014-10-23 The Lebanese civil war which spanned the years of 1975 to 1990 caused the migration of hundreds of thousands of Lebanese citizens many of whom are still writing of their experiences Jumana Bayeh presents an important and major study of the literature of the Lebanese diaspora Focusing on novels and writings produced in the aftermath of Lebanon's protracted civil war Bayeh explores the complex relationships between place displacement and belonging and illuminates

the ways in which these writings have shaped a global Lebanese identity Combining history with sociology Bayeh examines how the literature borne out of this expatriate community reflects a Lebanese diasporic imaginary that is sensitive to the entangled associations of place and identity Paving the way for new approaches to understanding diasporic literature and identity this book will be vital for researchers of migration studies and Middle Eastern literature as well as those interested in the cultures history and politics of the Middle East Introduction to Scientific Programming and Simulation Using R

Owen Jones,Robert Maillardet,Andrew Robinson,2009-03-11 Known for its versatility the free programming language R is widely used for statistical computing and graphics but is also a fully functional programming language well suited to scientific programming An Introduction to Scientific Programming and Simulation Using R teaches the skills needed to perform scientific programming while also introducing The Secret Guide to Computers WALTER,2013-12-11

**Computer Algebra** Keith O. Geddes,Stephen R. Czapor,George Labahn,2007-06-30 Algorithms for Computer Algebra is the first comprehensive textbook to be published on the topic of computational symbolic mathematics The book first develops the foundational material from modern algebra that is required for subsequent topics It then presents a thorough development of modern computational algorithms for such problems as multivariate polynomial arithmetic and greatest common divisor calculations factorization of multivariate polynomials symbolic solution of linear and polynomial systems of equations and analytic integration of elementary functions Numerous examples are integrated into the text as an aid to understanding the mathematical development The algorithms developed for each topic are presented in a Pascal like computer language An extensive set of exercises is presented at the end of each chapter Algorithms for Computer Algebra is suitable for use as a textbook for a course on algebraic algorithms at the third year fourth year or graduate level Although the mathematical development uses concepts from modern algebra the book is self contained in the sense that a one term undergraduate

course introducing students to rings and fields is the only prerequisite assumed The book also serves well as a supplementary textbook for a traditional modern algebra course by presenting concrete applications to motivate the understanding of the theory of rings and fields

**Second Home Tourism in Europe** Zoran Roca, 2016-04-01 Bringing together a wide range of studies from twelve European countries this book offers a state of the art overview of the driving forces behind spatial diversity and social complexity inherent in second home expansion in all parts of the continent from Scandinavia to the Mediterranean and from the British Isles to Russia in the context of contemporary mobility patterns largely induced by tourism As befits the overall conception of the book as a compendium of current second home research planning and policy issues the book endorses the following multidisciplinary approaches to the second home phenomenon as an expression of the leisure class mobility and recreation based lifestyles as well as a constitutive element of post productivist land use patterns and landscape change and socio economic and territorial development planning and policy related perspectives on social change and spatial re organization provoked by the expansion of second home tourism in times of prosperity and crisis This book shows that second home tourism has become such an important sector of the economy that it is no longer possible to let it develop freely it is the source of new forms of social deprivation it generates residential economies that are particularly sensitive to the economic cycle it often impairs beautiful landscapes and increases human pressure on natural environments As a result it is one of the major physical planning stakes of touristic areas From the concluding essay by Paul Claval Universit de Paris I Sorbonne Paris France

**An Invitation to Analytic Combinatorics** Stephen Melczer, 2020-12-22 This book uses new mathematical tools to examine broad computability and complexity questions in enumerative combinatorics with applications to other areas of mathematics theoretical computer science and physics A focus on effective algorithms leads to the development of computer algebra software of use to researchers in these domains After a survey of current results and open problems on decidability in enumerative combinatorics the text shows how the cutting edge of this research is the new domain of Analytic Combinatorics in Several Variables ACSV The remaining chapters of the text alternate between a pedagogical development of the theory applications including the resolution by this author of conjectures in lattice path enumeration which resisted several other approaches and the development of algorithms The final chapters in the text show through examples and general theory how results from stratified Morse theory can help refine some of these computability questions Complementing the written presentation are over 50 worksheets for the SageMath and Maple computer algebra systems working through examples in the text
