Science Et Religion:

Science and Religion Yves Gingras, 2017-06-16 Today we hear renewed calls for a dialogue between science and religion why has the old question of the relations between science and religion now returned to the public domain and what is at stake in this debate To answer these questions historian and sociologist of science Yves Gingras retraces the long history of the troubled relationship between science and religion from the condemnation of Galileo for heresy in 1633 until his rehabilitation by John Paul II in 1992 He reconstructs the process of the gradual separation of science from theology and religion showing how God and natural theology became marginalized in the scientific field in the eighteenth and nineteenth centuries In contrast to the dominant trend among historians of science Gingras argues that science and religion are social institutions that give rise to incompatible ways of knowing rooted in different methodologies and forms of knowledge and that there never was and cannot be a genuine dialogue between them Wide ranging and authoritative this new book on one of the fundamental questions of Western thought will be of great interest to students and scholars of the history of science and of religion as well as to general readers who are intrigued by the new and much publicized conversations about the alleged links between science and religion

The Territories of Science and Religion Peter Harrison, 2015-04-06 An extremely rewarding exploration of how these two great human endeavors can not only coexist but enrich each other Times Literary Supplement The conflict between science and religion seems indelible even eternal Surely two such divergent views of the universe have always been in fierce opposition Actually that s not the case says Peter Harrison Our very concepts of science and religion are relatively recent emerging only in the past three hundred years and it is those very categories rather than their underlying concepts that constrain our understanding of how the formal study of nature relates to the religious life In *The Territories of Science and Religion* Harrison dismantles what we think we know about the two categories then puts it all back together again in a provocative productive new way By tracing the history of these concepts for the first time in parallel he illuminates alternative boundaries and little known relations between them thereby making it possible for us to learn from their true history and see other possible ways that scientific study and the religious life might relate to influence and mutually enrich each other A tour de force by a distinguished scholar working at the height of his powers *The Territories of Science and Religion* promises to forever alter the way we think about these fundamental pillars of human life and experience An admirable contribution to the history of science and religion Publishers Weekly

The Warfare between Science &

Religion Jeff Hardin, Ronald L Numbers, Ronald A. Binzley, 2018-10-15 A very welcome volume of essays questioning the presumption of irreconcilable conflict between science and religion British Journal for the History of Science The conflict thesis the idea that an inevitable irreconcilable conflict exists between science and religion has long been part of the popular imagination The Warfare between Science and Religion assembles a group of distinguished historians who explore the origin of the thesis its reception the responses it drew from various faith traditions and its continued prominence in public discourse Several essays examine the personal circumstances and theological idiosyncrasies of important intellectuals including John William Draper and Andrew Dickson White who through their polemical writings championed the conflict thesis relentlessly Others consider what the thesis meant to different religious communities including evangelicals liberal Protestants Roman Catholics Eastern Orthodox Christians Jews and Muslims Finally essays both historical and sociological explore the place of the conflict thesis in popular culture and intellectual discourse today Based on original research and written in an accessible style the essays in The Warfare between Science and Religion take an interdisciplinary approach to question the historical relationship between science and religion and bring much needed perspective to an often bitter controversy Contributors include Thomas H Aechtner Ronald A Binzley John Hedley Brooke Elaine Howard Ecklund Noah Efron John H Evans Maurice A Finocchiaro Frederick Gregory Bradley J Gundlach Monte Harrell Hampton Jeff Hardin Peter Harrison Bernard Lightman David N Livingstone David Mislin Efthymios Nicolaidis Mark A Noll Ronald L Numbers Lawrence M Principe Jon H Roberts Christopher P Scheitle M Alper Yal inkaya Science and Religion Gary B. Ferngren, 2017-03 Weissenbacher Stephen P Weldon and Tomoko Yoshida **After Science and Religion** Peter Harrison, John Milbank, 2022-05-19 The popular field of science and religion is a lively and well established area It is however a domain which has long been characterised by certain traits In the first place it tends towards an adversarial dialectic in which the separate disciplines now conjoined are forever locked in a kind of mortal combat Secondly science and religion has a tendency towards disentanglement where science does one sort of thing and religion another And thirdly the duo are frequently pushed towards some sort of attempted synthesis wherein their aims either coincide or else are brought more closely together In attempting something fresh and different this volume tries to move beyond tried and tested tropes Bringing philosophy and theology to the fore in a way rarely attempted before the book shows how fruitful new conversations between science and religion can at last move beyond the increasingly tired options of either conflict or dialogue **Science and the World's Religions** Patrick McNamara Ph.D., Wesley J. Wildman, 2012-07-19 This trio of volumes contains essays that explore vital existential moral or metaphysical issues surrounding the relationship between the sciences and the world's religions In Science and the World's Religions experts with scientific and religious backgrounds explore vital existential or practical issues drawing on whatever sciences are relevant and engaging at least two religious traditions The multidisciplinary essays exhibit rigorous intellectual scholarly thinking but are written to clearly communicate to educated

adult lay readers The first volume addresses questions about the origins and purpose of the cosmos and the human project The second volume investigates the roles of religion and spirituality in human existence considering issues ranging from the brain and religious experience to the human life cycle The third volume tackles controversies in which both religion and science are stakeholders showing how both can deepen understanding and enrich human experience Together these three books present readers with powerful tools that enable them to think through the challenge of integrating science with their religious beliefs and spiritual practices

Between Science and Religion Phillip M. Thompson, 2009-08-15 In exploring the role of Catholic intellectuals in engaging science and technology in the twentieth century this book initially provides a background context for this evolution by examining the Modernism crisis in the first chapter In order to unpack the subsequent evolution Thompson then concentrates in separate chapters on the distinctive contributions of four specific Catholic intellectuals Jacques Maritain 1882 1973 Pierre Teilhard de Chardin 1881 1955 Bernard Lonergan 1904 1984 and Thomas Merton 1915 1968 All of these intellectuals experienced some degree of official restraint in their efforts but through their distinctive intellectual trajectories they contributed to a different engagement of the Church with science and technology In the final chapters the book first reviews the changes within the institutional Church in the twentieth century toward science and technology Finally it then applies some key ideals of the four intellectuals to anneal and extend John Paul II's approach of critical openness to suggest how the Church can now engage science and technology

Science and Religion Thomas Dixon, Geoffrey Cantor, Stephen Pumfrey, 2010-04-01 The idea of an inevitable conflict between science and religion was decisively challenged by John Hedley Brooke in his classic *Science and Religion Some Historical Perspectives* Cambridge 1991 Almost two decades on *Science and Religion New Historical Perspectives* revisits this argument and asks how historians can now impose order on the complex and contingent histories of religious engagements with science Bringing together leading scholars this volume explores the history and changing meanings of the categories science and religion the

role of publishing and education in forging and spreading ideas the connection between knowledge power and intellectual imperialism and the reasons for the confrontation between evolution and creationism among American Christians and in the Islamic world A major contribution to the historiography of science and religion this book makes the most recent scholarship on this much misunderstood debate widely accessible Heterodoxy in Early Modern Science and Religion John Brooke,Ian Maclean,2005-12-01 The separation of science and religion in modern secular culture can easily obscure the fact that in sixteenth and seventeenth century Europe ideas about nature were intimately related to ideas about God Readers of this book will find fresh and exciting accounts of a phenomenon common to both science and religion deviation from orthodox belief How is heterodoxy to be measured How might the scientific heterodoxy of particular thinkers impinge on their religious views Would heterodoxy in religion create a predisposition towards heterodoxy in science Might there be a homology between heterodox views in both domains Such major protagonists as Galileo and Newton are re examined together with less familiar figures in order to bring out the extraordinary richness of scientific and religious thought in the pre modern world **Science and Religion in India** Renny Thomas,2021-12-30 This book provides an in depth ethnographic study of science and religion in the context of South Asia giving voice to Indian scientists and shedding valuable light on their engagement with religion Drawing on biographical autobiographical historical and ethnographic material the volume focuses on scientists religious life and practices and the variety of ways in which they express them Renny Thomas challenges the idea that science and religion in India are naturally connected and argues that the discussion has to go beyond binary models of conflict and complementarity By complicating the understanding of science and religion in India the book engages with new ways of looking at these categories Science and Religion: Fifty Years After Vatican II Kenan Osborne OFM,Ki Wook Min,2014-01-31 In the past one hundred years two major realities have changed both science and religion The world of science has been enriched by quantum physics the computation of the age of the universe archaeological data in the Middle East and a scientific stress on historical writing The world of religion has been enriched by the establishment of the World Council of Churches and the Second Vatican Council In the past fifty years major scientists and major religious leaders have met together again and again In the past fifty years religious leaders from Christianity Islam and Judaism have held a number of thought provoking conferences In this volume these gatherings are reviewed and evaluated Two major religious problems have challenged the science religion discussions namely which God should the scientists agree on the Trinitarian God Allah or Yahweh Which history of the universe sponsored by these three religions should scientists be looking for This volume raises questions and suggests some preliminary forms of serious discussion

Pourquoi la Science et la Foi vont de Pair Malcolm A. Jeeves,2023-04-12 Lorsque nous essayons de nous comprendre et de comprendre le monde dans lequel nous vivons nous nous tournons souvent d'abord vers la science et ensuite s'il reste des lacunes dans notre compréhension nous essayons de les combler en nous référant à Dieu et à notre foi Cette approche

que nous appelons le dieu des lacunes a une longue histoire et malheureusement elle est encore bien vivante aujourd'hui Ce livre a été écrit pour offrir une approche alternative en posant cette question fondamentale comment les chrétiens ayant reçu une éducation formelle peuvent-ils maintenir leur honnêteté intellectuelle et en même temps être fidèles à la fois à l'Écriture et à la science Ce livre donne des exemples de quelques uns des problèmes les plus épineux qui se posent aujourd'hui dans le domaine de la science et de la foi et propose des moyens de réfléchir de manière constructive à chacun d'entre eux Malcolm A. Jeeves est professeur émérite de psychologie à l'université de St Andrews en Écosse ancien président de la Société royale d'Édimbourg et de l'Académie nationale d'Écosse et membre de l'Académie des sciences médicales et de la Société britannique de psychologie Pionnier de la psychologie cognitive de la neuropsychologie et de la psychologie évolutionniste il est l'auteur de nombreux ouvrages sur la science et la foi *Alfred Loisy and the Making of History of Religions* Annelies

Lannoy, 2020-08-10 This monograph studies the professionalization of History of religions as an academic discipline in late 19th and early 20th century France and Europe Its common thread is the work of the French Modernist priest and later Professor of History of religions at the Collège de France Alfred Loisy 1857-1940 who participated in many of the most topical debates among French and international historians of religions Unlike his well studied Modernist theology Loisy's writings on comparative religion and his rich interactions with famous scholars like F. Cumont, M. Mauss or J. G. Frazer remain largely unknown This monograph is the first to paint a comprehensive picture of his career as a historian of religions before and after his excommunication in 1908 Through a contextual analysis of publications by Loisy and contemporaries and a large corpus of private correspondence it illuminates the scientification of the discipline between 1890-1920 and its deep entanglement with religion politics and society Particular attention is also given to the role of national and transnational scholarly networks and the way they controlled the theoretical and institutional frameworks for studying the history of religions **Science and Religion, 1450-1900** Richard G. Olson, Richard Olson, 2006-03-10

Galileo Newton Darwin These giants are remembered for their great contributions to science Often forgotten however is the profound influence that Christianity had on their lives and work This study explores the many ways in which religion its ideas attitudes practices and institutions interacted with science from the beginnings of the Scientific Revolution to the end of the nineteenth century Both scientists and persons of faith sometimes characterize the relationship between science and religion as confrontational Historian Richard G. Olson finds instead that the interactions between science and religion in Western Christendom have been complex often mutually supportive even transformative This book explores those interactions by focusing on a sequence of major religious and intellectual movements from Christian Humanist efforts to turn science from a primarily contemplative exercise to an activity aimed at improving the quality of human life to the widely varied Christian responses to Darwinian ideas in both Europe and North America during the second half of the nineteenth century Religion and Academia

Reframed: Connecting Religion, Science, and Society in the Long Sixties , 2023-08-07 The Long Sixties 1955-1973 were a

period of economic prosperity political unrest sexual liberation cultural experimentation and profound religious innovation throughout the Western world This social effervescence also affected the study of religion by reshaping the relationships between academic and religious institutions and discourses While the mainstream churches sought to deploy the instruments of the social sciences to understand and manage the changing socioreligious context prominent scholars regarded the bubbly spirituality of the counterculture as the harbinger of a new era some of them actively used their academic knowledge to further this revolution This book discusses the multiple entanglements of religion and science during these turbulent decades through theoretically informed case studies from both sides of the Atlantic

The Landscapes of Science and Religion Nick Spencer, Hannah Waite, 2025-01-24

The relationship between science and religion has long been a heated debate and is becoming an ever more popular topic The scientific capacity to manipulate and change humans and their environment through genetic engineering life extension and AI is going to take a huge leap forward in the twenty first century provoking endless debates around humans playing God But what do we mean by this Asking this question is surprisingly hard work Attempts to essentialise science let alone religion quickly run into trouble Where are the boundaries Whose definition of science is definitive Which concept of religious is the authoritative one Ultimately neither science nor religion can be pinned down to one single meaning or definition Rather they encompass a family of definitions that relate to one another in a complex web of shifting ways Drawing on extensive research with over a hundred leading thinkers in the UK including Martin Rees Brian Cox Susan Greenfield A C Grayling Ray Tallis Linda Woodhead Steve Bruce Adam Rutherford Robin Dunbar Francesca Stavrakopoulou and Iain McGilchrist *The Landscapes of Science and Religion* takes the much needed step of asking what science and religion actually are before turning to the familiar question of how they relate to one another Building on this by paying particular attention to those who sense some form of conflict here Spencer and Waite explore where the perceived conflict really lies What exactly are people disagreeing about when they disagree about science and religion and what if anything can we do to improve that disagreement and bring about a fruitful dialogue between these two important human endeavours
