Byron, 1977 The families genera and species of all larval fishes are tabulated and the abundance length frequencies and

distribution of 12 species and 2 families are summarized utilizing data collected on 8 ichthyoplankton surveys of the Gulf of Maine Georges Bank area. The segregation of coastal and oceanic species north and south of the coastal slope water boundary during December is evidence in a comparison of the distribution of upper 100 m integrated temperature and Atlantic herring *Myctophidae* and *Paralepididae* larvae. All larval barracudinas and lanternfishes occurred in areas where the integrated temperature was above 11 and 13 C respectively. Ninety one percent of positive larval herring tows were in areas where the integrated temperature was below 13 C.
