The Search for a Naturalistic World View: Volume 1 Abner Shimony, 1993-02-26 This two volume 1993 collection of his essays written over a period of forty years explores the interrelations between science and philosophy Naturalistic World View: Scientific method and epistemology Abner Shimony, 1993 The Search for a Naturalistic World View: Abner Shimony, 1993-02-26 Abner Shimony is one of the most eminent of present day philosophers of science whose work has exerted a profound influence in both the philosophy and physics communities. This two volume collection of his essays written over a period of forty years explores the interrelations between science and philosophy Shimony regards the knowing subject as an entity in nature whose faculties must be studied from the points of view of evolutionary biology and empirical psychology He maintains that the twentieth century is one of the great ages of metaphysics given the deep implications of quantum mechanics relativity theory and molecular biology Nevertheless he rejects the thesis that mentality is entirely explicable in physical terms and argues that mind has a fundamental place in nature Though distinguishing between values and scientifically established facts Shimony holds that the sense of wonder cultivated by the natural sciences is one of the noblest of human values The first volume Scientific Method and Epistemology deals with the dialectic of subject and object epistemic probability induction and scientific theories perception and conception and fact and values The focus of the second volume Natural Science and Metaphysics is on quantum mechanical measurement and nonlocality parts and wholes time and mind and matter The volumes will be of great interest to a broad range of philosophers of science as well as those who teach epistemology and metaphysics The collection will also be read by philosophically minded natural scientists especially physicists The Search for a Naturalistic World View: Abner Shimony, 1993-02-26 Abner Shimony an eminent philosopher of science whose work has exerted a profound influence in both the philosophy and physics communities This two volume collection of his essays written over a period of forty years explores the interrelations between science and philosophy Shimony regards the knowing subject as an entity in nature whose faculties must be studied from the points of view of evolutionary biology and empirical psychology He maintains that the twentieth century is one of the great ages of metaphysics given the deep implications of quantum mechanics relativity theory and molecular biology. The collection will also be read by philosophically minded natural scientists especially physicists Relativity and the Dimensionality of the World Vesselin Petkov, 2007-10-08 All physicists would agree that one of the most fundamental problems of the 21st century physics is the dimensionality of the world In the four dimensional world of Minkowski or Minkowski spacetime the most challenging problem is the nature of the temporal dimension. In Minkowski spacetime it is merely one of the four dimensions which means that it is entirely given like the other three spacial dimensions If the temporal dimension were not given in its entirety and only one constantly changing moment of it existed Minkowski spacetime would be reduced to the ordinary three dimensional space But if the physical world represented by Minkowski spacetime is indeed four dimensional with time being the fourth dimension then such a world is drastically different from its image based on our perceptions Minkowski four dimensional world is a block Universe a frozen world in which nothing happens since all moments of time are given at once which means that physical bodies are four dimensional worldtubes containing the whole histories in time of the three dimensional bodies of our everyday experience The implications of a real Minkowski world for physics itself and especially for our world view are enormous The main focus of this volume is the question is spacetime nothing more than a mathematical space which describes the evolution in time of the ordinary three dimensional world or is it a mathematical model of a real four dimensional world with time entirely given as the fourth dimension It contains fourteen invited papers which either directly address the main question of the nature of spacetime or explore issues related to it Feng Shui: Teaching About Science and Pseudoscience Michael R. Matthews, 2019-07-18 This book provides a richly documented account of the historical cultural philosophical and practical dimensions of feng shui It argues that where feng shui is entrenched educational systems have a responsibility to examine its claims and that this examination provides opportunities for students to better learn about the key features of the nature of science the demarcation of science and non science the characteristics of pseudoscience and the engagement of science with culture and worldviews The arguments presented for feng shui being a pseudoscience can be marshalled when considering a whole range of comparable beliefs and the educational benefit of their

Harmon, 2023-02-28 In a Western culture of increasing skepticism towards conservative Christianity what motivates intellectually driven atheists to believe in the reality of God and become passionate followers of Christ Review of social science literature confirms a predominant functional approach to religious conversion effectively reducing a complex substantive phenomenon to a partial functional explanation In response the chief focus of this book is to take a broader look at religious conversion to determine the precursors and pathways from atheistic disbelief to belief in God and Christianity within an educated population Findings are drawn from PhD based research evaluating a broad range of functional and substantive variables influencing religious conversion Data was collected through both survey and interview of fifty educated

skeptical atheists in the contemporary West who once held belief God and Christianity as implausible unattractive and irrelevant Yet they became utterly convinced that the Christian faith was true and good worth personal life commitment. These former atheists not only experienced a change of their worldview but also a dramatic transformation of their whole world. In depth narrative analysis revealed the integrated transformative nature of religious conversion in areas of sense making identity experience meaning and purpose community language and spirituality. Overall this book advances the case for using an inclusive transformational perspective in future description conception and modeling for religious conversion of atheists to conservative forms of Christianity. The Emerging Physics of Consciousness Jack A. Tuszynski, 2006-09-05. Seeks answers to these questions using the underlying assumption that consciousness can be understood using the intellectual potential of modern physics and other sciences. There are a number of theories of consciousness some based on classical physics while others require the use of quantum concepts. The latter ones have drawn criticism from the parts of the scientific establishment while simultaneously claiming that classical approaches are doomed to failure. The contributing authors presents a spectrum of opinions from both sides of this on going scientific debate allowing readers to decide for themselves which of the approaches are most likely to succeed.
