Game Theory Joachim Rosenmüller, 2013-03-09 Game Theory Stochastics Information Strategies and Cooperation provides a discussion of some relevant topics in game theory It is composed partially from material compiled by Professor Joachim Rosenmüller when lecturing at IMW the Institute of Mathematical Economics at the University of Bielefeld On the other hand it also contains research topics that are not presented in a typical game theory textbook Thus the volume may provide the basis for an advanced course in game theory simultaneously it may be called a monograph and as a third aspect it also supplies some rather elementary versions of advanced topics of the field The volume has a non cooperative and a

cooperative part and in both of them the reader is assumed to have some basic knowledge in game theory for instance concerning the normal form bimatrix games Nash equilibria of the mixed extension backwards induction in games with perfect information on one hand and the coalitional function simple games convex games superadditive games the core the Shapley value on the other hand Some emphasis is laid on the probabilistic background however the author treats stochastic games using the language of probability in order to consider simple models in which measure theory can be omitted
