Optimal Measurement Methods For Distributed Parameter System Identification:

Optimal Measurement Methods for Distributed Parameter System Identification Dariusz Ucinski, 2004-08-27 For dynamic distributed systems modeled by partial differential equations existing methods of sensor location in parameter estimation experiments are either limited to one dimensional spatial domains or require large investments in software systems With the expense of scanning and moving sensors optimal placement presents a critical problem **Automatic Control, Robotics, and Information Processing**

Piotr Kulczycki, Józef Korbicz, Janusz Kacprzyk, 2020-09-03 This book presents a wide and comprehensive range of issues and problems in various fields of science and engineering from both theoretical and applied perspectives The desire to develop more effective and efficient tools and techniques for dealing with complex processes and systems has been a natural inspiration for the emergence of numerous fields of science and technology in particular control and automation and more recently robotics The contributions gathered here concern the development of methods and algorithms to determine best practices regarding broadly perceived decisions or controls From an engineering standpoint many of them focus on how to automate a specific process or complex system From a tools based perspective several contributions address the development of analytic and algorithmic methods and techniques devices and systems that make it possible to develop and subsequently implement the automation and robotization of crucial areas of human activity All topics discussed are illustrated with sample applications **Model Based Parameter Estimation**

Hans Georg Bock, Thomas Carraro, Willi Jäger, Stefan Körkel, Rolf Rannacher, Johannes P. Schlöder, 2013-02-26 This judicious selection of articles combines mathematical and numerical methods to apply parameter estimation and optimum experimental design in a range of contexts These include fields as diverse as biology medicine chemistry environmental physics image processing and computer vision The material chosen was presented at a multidisciplinary workshop on parameter estimation held in 2009 in Heidelberg The contributions show how indispensable efficient methods of applied mathematics and computer based modeling can be to enhancing the quality of interdisciplinary research The use of scientific computing to model simulate and optimize complex processes has become a standard methodology in many scientific fields as well as in industry Demonstrating that the use of state of the art optimization techniques in a number of research areas has much potential for improvement this book provides advanced numerical methods and the very latest results for the applications under consideration

System Modeling and Optimization Christian Pötzsche, Clemens Heuberger, Barbara Kaltenbacher, Franz Rendl, 2014-11-27 This book is a collection of thoroughly refereed papers presented at the 26th IFIP TC 7 Conference on System Modeling and Optimization held in Klagenfurt Austria in September 2013 The 34 revised papers were carefully selected from numerous submissions They cover the latest progress in a wide range of topics such as optimal control of ordinary and partial differential equations modeling and simulation inverse problems nonlinear discrete and stochastic optimization as well as industrial applications Advanced, Contemporary Control

Marek Pawelczyk, Dariusz

Bismor, Szymon Ogonowski, Janusz Kacprzyk, 2023-06-15 This book introduces the reader to the hottest topics in current control sciences and robotics as seen by scientists from Poland and other European countries Volume 1 comprises 37 chapters which specifically address topics connected to modeling identification and analysis of automation systems to design of control systems and to fault diagnosis and fault tolerant control The contributions were presented during XXI Polish Control Conference held in Gliwice Poland from June 26 to 29 2023 This book is extremely useful to all persons who want to know the latest trends in automation and robotics Modeling and Analysis of Linear Hyperbolic Systems of Balance Laws

Krzysztof Bartecki, 2015-12-21 This monograph focuses on the mathematical modeling of distributed parameter systems in which mass energy transport or wave propagation phenomena occur and which are described by partial differential equations of hyperbolic type The case of linear or linearized 2×2 hyperbolic systems of balance laws is considered i.e. systems described by two coupled linear partial differential equations with two variables representing physical quantities depending on both time and one dimensional spatial variable Based on practical examples of a double pipe heat exchanger and a transportation pipeline two typical configurations of boundary input signals are analyzed collocated wherein both signals affect the system at the same spatial point and anti collocated in which the input signals are applied to the two different end points of the system The results of this book emerge from the practical experience of the author gained during his studies conducted in the experimental installation of a heat exchange center as well as from his research experience in the field of mathematical and computer modeling of dynamic systems The book presents valuable results concerning their state space transfer function and time domain representations which can be useful both for the open loop analysis as well as for the closed loop design The book is primarily intended to help professionals as well as undergraduate and postgraduate students involved in modeling and automatic control of dynamic systems **Fault Diagnosis and Fault-Tolerant Control Strategies for Non-Linear Systems**

Marcin Witczak, 2013-12-11 This book presents selected fault diagnosis and fault tolerant control strategies for non linear systems in a unified framework In particular starting from advanced state estimation strategies up to modern soft computing the discrete time description of the system is employed Part I of the book presents original research results regarding state estimation and neural networks for robust fault diagnosis Part II is devoted to the presentation of integrated fault diagnosis and fault tolerant systems It starts with a general fault tolerant control framework which is then extended by introducing robustness with respect to various uncertainties Finally it is shown how to implement the proposed framework for fuzzy systems described by the well known Takagi Sugeno models This research monograph is intended for researchers engineers and advanced postgraduate students in control and electrical engineering computer science as well as mechanical and chemical engineering *Collecting Spatial Data* Werner G. Müller, 2007-08-17 The book is concerned with the statistical theory for locating spatial sensors It bridges the gap between spatial statistics and optimum design theory After introductions to those two fields the topics of exploratory designs and designs for spatial trend

and variogram estimation are treated Special attention is devoted to describing new methodologies to cope with the problem of correlated observations

Parallel Processing and Applied Mathematics Roman Wyrzykowski, 2008-05-26 This book constitutes the thoroughly refereed post conference proceedings of the 7th International Conference on Parallel Processing and Applied Mathematics PPAM 2007 held in Gdansk Poland in September 2007 The 63 revised full papers of the main conference presented together with 85 revised workshop papers were carefully reviewed and selected from over 250 initial submissions The papers are organized in topical sections on parallel distributed architectures and mobile computing numerical algorithms and parallel numerics parallel and distributed non numerical algorithms environments and tools for as well as applications of parallel distributed grid computing evolutionary computing meta heuristics and neural networks The volume proceeds with the outcome of 11 workshops and minisymposia dealing with novel data formats and algorithms for dense linear algebra computations combinatorial tools for parallel sparse matrix computations grid applications and middleware large scale computations on grids models algorithms and methodologies for grid enabled computing environments scheduling for parallel computing language based parallel programming models performance evaluation of parallel applications on large scale systems parallel computational biology high performance computing for engineering applications and the minisymposium on interval analysis
