Options for Strategic Military Transportation Systems , *Options for Strategic Military Transportation Systems* David Alan Arthur, 2005 This Congressional Budget Office study prepared at the request of the Readiness Subcommittee of the House Committee on Armed Services looks at the technical operational and cost issues associated with alternative transportation systems that DoD might develop and procure to reduce the time needed to deploy forces The Department of Defense DoD is pursuing a variety of initiatives designed to reduce the time necessary to deploy combat forces around the world including ongoing production of C 17 transport aircraft by the Air Force development of concepts for the sea basing of military forces by the Navy and Marine Corps and development of lighter more easily transportable combat vehicles by the Army as part of its Future Combat Systems program The study compares the advantages disadvantages and costs of six transportation alternatives four that would use existing technologies and two that would develop more advanced systems

A CBO Study. Options for Strategic Military Transportation Systems , 2005 Since the end of World War II the United States has maintained the ability to project combat power rapidly around the globe That ability has been achieved through a dual approach forward basing units overseas in regions of particular importance and fielding longrange strategic transportation systems that can move forces around the world quickly either to reinforce the forward based units or to respond to needs that arise elsewhere Following the Cold War emphasis has shifted away from forward basing and toward increasing the mobility of forces based in the United States In the past 15 years the U S military has cut the number of forward based troops by about half and has improved its strategic transportation capability by fielding such systems as C 17 airlift aircraft and large medium speed roll on roll off ships LMSRs for sealift In addition the Army is largely focusing its current transformation efforts on changing equipment and organization to create units that can be deployed more quickly and easily Nevertheless officials in the Department of Defense DoD seek to increase the speed of military deployments to an even greater degree because the ability to deliver forces to a distant theater in the first few days or weeks of a crisis is seen as critical to ensuring a favorable outcome *Options for Strategic Military Transportation Systems* David Alan Arthur, United States. Congressional Budget Office, 2005 This Congressional Budget Office study prepared at the request of the Readiness Subcommittee of the House Committee on Armed Services looks at the technical operational and cost issues associated with alternative transportation systems that DoD might develop and procure to reduce the time needed to deploy forces The Department of Defense DoD is pursuing a variety of initiatives designed to reduce the time necessary to deploy combat forces around the world including ongoing production of C 17 transport aircraft by the Air Force development of concepts for the sea basing of military forces by the Navy and Marine Corps and development of lighter more easily transportable combat vehicles by the Army as part of its Future Combat Systems program The study compares the advantages disadvantages and costs of six transportation alternatives four that would use existing technologies and two that

would develop more advanced systems *The Future of Land Warfare* Michael E. O'Hanlon, 2015-08-31 What happens if we bet too heavily on unmanned systems cyber warfare and special operations in our defense In today's U.S. defense policy debates big land wars are out Drones cyber weapons special forces and space weapons are in Accordingly Pentagon budget cuts have honed in on the army and ground forces this after the long wars in Iraq and Afghanistan seems like an appealing idea No one really wants American boots on the ground in bloody conflicts abroad But it is not so easy to simply declare an end to messy land wars A survey of the world's trouble spots suggests that land warfare has more of a future than many now seem to believe In *The Future of Land Warfare* Michael O'Hanlon offers an analysis of the future of the world's ground forces Where are large scale conflicts or other catastrophes most plausible Which of these could be important enough to require the option of a U.S. military response And which of these could in turn demand significant numbers of American ground forces in their resolution O'Hanlon is not predicting or advocating big American roles in such operations only cautioning against overconfidence that we can and will avoid them O'Hanlon considers a number of illustrative scenarios in which large conventional forces may be necessary discouraging Russia from even contemplating attacks against the Baltic states discouraging China from considering an unfriendly future role on the Korean peninsula handling an asymmetric threat in the South China Sea with the construction and protection of a number of bases in the Philippines and elsewhere managing the aftermath of a major and complex humanitarian disaster superimposed on a security crisis perhaps in South Asia coping with a severe Ebola outbreak not in the small states of West Africa but in Nigeria at the same time that country falls further into violence addressing a further meltdown in security conditions in Central America *Fly and Be Damned* Peter McManners, 2012-02-23 Peter McManners gets underneath the well known facts about the unsustainable nature of the aviation industry and argues for fundamental change to our travelling habits The first book to transcend the emotional debate between the entrenched positions of those who are either for or against flying this groundbreaking work argues that aviation is stuck in a stalemate between misguided policy and a growing imperative to deal with its environmental impact and that there is now little possibility that the transition to sustainable flying can be a smooth evolution [A Skeptic's Case for Nuclear Disarmament](#) Michael E. O'Hanlon, 2013-08-01 In 2007 two former U.S. secretaries of state a defense secretary and a former senator wrote persuasively in the Wall Street Journal that the time had come to move seriously toward a nuclear free world Almost two years later the Global Zero movement was born with its chief aim to rid the world of such weapons once and for all by 2030 But is it realistic or even wise to envision a world without nuclear weapons More and more people seem to think so Barack Obama has declared America's commitment to seek the peace and security of a world without nuclear weapons But that is easier said than done Michael O'Hanlon places his own indelible stamp on this critical issue putting forth a friendly skeptic's case for nuclear disarmament Calls to ban the bomb are as old as the bomb itself but the pace and organization of nonproliferation campaigns have picked up greatly recently The growing Global Zero movement for example

wants treaty negotiations to begin in 2019 Would this be prudent or even feasible in a world that remains dangerous divided and unpredictable After all America s nuclear arsenal has been its military trump card for much of the period since World War II Pursuing a nuclear weapons ban prematurely or carelessly could alarm allies leading them to consider building their own weapons the opposite of the intended effect O Hanlon clearly presents the dangers of nuclear weapons and the advantages of disarmament as a goal But even once an accord is in place he notes temporary suspension of restrictions may be necessary in response to urgent threats such as nuclear cheating or discovery of an advanced biological weapons program To take all nuclear options off the table forever strengthens the hand of those that either do not make that pledge or do not honor it For the near term traditional approaches to arms control including dismantling existing bomb inventories can pave the way to make a true nonproliferation regime possible in the decades ahead **Defense 101** Michael E.

O'Hanlon,2021-05-15 In Defense 101 a concise primer for understanding the United States 700 billion defense budget and rapidly changing military technologies Michael O Hanlon provides a deeply informed yet accessible analysis of American military power After an introduction in which O Hanlon surveys today s international security environment provides a brief sketch of the history of the US military its command structure the organization of its three million personnel and a review of its domestic basing and global reach Defense 101 provides in depth coverage of four critical areas in military affairs Defense Budgeting and Resource Allocation detailed budget and cost breakdowns wartime spending allocations economics of overseas basing military readiness and defense budgeting versus US grand strategy Gaming and Modeling Combat wargaming micro modeling nuclear exchange calculations China scenarios and assessments of counterinsurgency missions Technological Change and Military Innovation use of computers communications and robotics cutting edge developments in projectiles and propulsion systems The Science of War military uses of space missile defense and nuclear weapons testing and proliferation For policy makers and experts military professionals students and citizens alike Defense 101 helps make sense of the US Department of Defense the basics of war and the future of armed conflict and the most important characteristics of the American military *Legislative Branch Appropriations for 2007* United States. Science of War Michael E. O'Hanlon, 2013-04-21 An essential introduction to modern defense policy The U S military is one of the largest and most complex organizations in the world How it spends its money chooses tactics and allocates its resources have enormous implications for national defense and the economy The Science of War is the only comprehensive textbook on how to analyze and understand these and other essential problems in modern defense policy Michael O Hanlon provides undergraduate and graduate students with an accessible yet rigorous introduction to the subject Drawing on a broad range of sources and his own considerable expertise as a defense analyst and teacher he describes the analytic techniques the military uses in every crucial area of military science O Hanlon explains how the military budget works how the military assesses and deploys new technology develops strategy and fights wars handles the logistics of stationing and moving troops and equipment around the world and models and evaluates battlefield outcomes His modeling techniques have been tested in Iraq and Afghanistan including the methods he used to predict higher than anticipated troop fatalities in Iraq controversial predictions that have since been vindicated The Science of War is the definitive resource on warfare in the twenty first century Gives the best introduction to defense analysis available Covers defense budgeting Shows how to model and predict outcomes in war Explains military logistics including overseas basing Examines key issues in military technology including missile defense space warfare and nuclear weapons testing Based on the author s graduate level courses at Princeton Columbia and Georgetown universities

Sea Basing and Alternatives for Deploying and Sustaining Ground Combat Forces United States. Congressional Budget Office, 2007 A centerpiece of the Department of Defense s DoD s transformation efforts in recent years has been the move toward making ground forces less reliant on access to foreign controlled facilities such as harbors airports or logistics bases on the ground in their area of operations The United States Marine Corps and Army have long maintained expeditionary forces organized and equipped to be rapidly moved and inserted into combat with little reliance on access to local bases or infrastructure Recognizing the vulnerability of forces that are dependent on local access as U S forces have been in Afghanistan and Iraq the Department of Defense DoD is improving its expeditionary capabilities across all of the military services Prominent among those efforts is the Navy s plan to field a 14 ship squadro the Maritime Prepositioning Force Future or MPF F that would be capable of deploying employing and sustaining a Marine expeditionary brigade with little or no need for access to local bases or other infrastructure This study looks at the capabilities and costs associated with MPF F and sea basing in general as well as other approaches that DoD might take to improve its expeditionary capabilities Preface

Future NATO Enlargement Mark F. Cancian, 2022-01-15 Past NATO enlargement helped create a Europe whole free and at peace but future enlargement should it occur faces a hostile and militarily revitalized Russia This report examines the military requirements and resulting budget costs of extending NATO s Article 5 commitment to countries such as Ukraine Georgia or Bosnia Herzegovina which are actively seeking NATO membership and Sweden and Finland about which there has been analysis and speculation about membership Costs to the

United States range from 11 billion per year to defend Ukraine to half a billion dollars or less to defend Sweden The project recommends that NATO incorporate force requirements and cost considerations into its future decisionmaking **Cost Effective Airlift in the 21st Century** United States.
