Donald Tattersfield,1984      **Orbits for Amateurs with a Microcomputer** Donald Tattersfield,1984      **Compendium of Practical Astronomy** Günter D. Roth,2012-12-06 It is a pleasure to present this work which has been well received in German speaking countries through four editions to the English speaking reader We feel that this is a unique publication in that it contains valuable material that cannot easily if at all be found elsewhere We are grateful to the authors for reading through the English version of the text and for responding promptly for the most part to our queries Several authors have supplied us on their own initiative or at our suggestion with revised and updated manuscripts and with supplementary English references We have striven to achieve a translation of Handbuch for Sternfreunde which accurately presents the qualitative and quantitative scientific principles contained within each chapter while maintaining the flavor of the original German text Where appropriate we have inserted footnotes to clarify material which may have a different meaning and or application in English speaking countries from that in Germany When the first English edition of this work Astronomy A Handbook translated by the late A Beer appeared in 1975 it contained 21 chapters This new edition is over twice the length and contains 28 authored chapters in three volumes At Springer's request we have devised a new title Compendium of Practical Astronomy to more accurately reflect the broad spectrum of topics and the vast body of information contained within these pages      **An Economical Semi-analytical Orbit Theory for Micro-computer Applications** R. Boulet,1991     Calculate the Orbit of Mars! Jane Clark,2021-09-09 This book shows readers how to calculate the orbit of Mars based on their own observations and using observations made by the author The historical observational and analytical aspects of the project to measure the orbit of Mars are all combined in this one book Determining the orbit of Mars is particularly important as originally solving this problem required the founding of modern science Clark discusses how people came to believe in the Newtonian model of the Solar System works through the mathematical basis for the theory of gravity and shows how Newton ruled out the possibility of alternative theories Readers also learn how it became possible to accurately measure the positions of Mars from a moving spinning platform the Earth This mid level observational challenge is well within reach of most serious amateur astronomers For the observations only a telescope with auto guiding capability and the ability to mount a digital single lens reflex DSLR camera is required For the calculations it is assumed that the reader has a science engineering or mathematics background and is familiar with calculus vectors and trigonometry     **Archaeoastronomy** ,1985     *Predicting and Elliptical Trajetory Using Gauss's Method of*
