Order in the Amorphous "State" of Polymers Steven E. Keinath, Robert L. Miller, James K. Rieke, 2012-12-06 In 1975 a symposium was held in Midland Michigan co sponsored by the Dow Chemical Company and the then Midland Macromolecular Institute in honor of Raymond F Boyer on the occasion of his 65th birthday and retirement from Dow The topic of that first Boyer symposium dealt with an area of interest to Boyer namely polymer transitions and relaxations One decade later after ten years of additional fruitful scientific endeavor at MMI Ray Boyer was again honored with a symposium this time celebrating his 75th birthday and 10th anniversary at the Michigan Molecular Institute The topic of the second Boyer symposium in 1985 was somewhat more focused this time concentrating on the subject of order or structure in the amorphous state of polymers and the attendant polymer transitions that are observed This volume contains the full manuscripts of the contributors to the 17th MMI International Symposium held in Midland Michigan on August 18 21 1985 Eleven one hour plenary lectures and ten 20 minute contributed papers were presented during the Symposium An open forum panel discussion was also scheduled the edited transcript of that session is included at the end of this volume One of our tasks in organizing this Symposium was to attempt to gather together a number of speakers who would be able to define what if any physical structure might be present in amorphous polymers and what the nature of this order might be

Rieke, 2014-01-15 **Structure of the Polymer Amorphous State** Kozlov, Gennady Zaikov, 2004-02-01 The basic problem of polymer physics is obtaining a structure properties correlations for their future application for practical purposes However these cannot be obtained without the development of a quantitative model of the polymer structure This problem has been actively investigated during the last 45 years **Order in the amorphous "state" : [proceedings of the 17th International Symposium on Order in the Amorphous "State" of Polymers, held August 18 - 21, 1985 in Midland, Michigan]** Steven E. Polymer Fracture Hans-Henning Kausch, 2012-12-06 The first edition of this book had been written with the special aim to provide the necessary information for an understanding of the deformation and scission of chain molecules and its role in polymer fracture In this field there had been an intense activity in the sixties and early seventies The new results from spectroscopical ESR IR and fracture mechanics methods reported in the first edition had complemented in a very successful way the conventional interpretations of fracture behavior The extremely friendly reception of this book by the polymer community has shown that the subject was timely chosen and that the treatment had satisfied a need In view of the importance of a molecular interpretation of fracture phenomena and of the continued demand for this book which still is the only one of its kind a second edition has become necessary The aims of the second edition will be similar to those of the first it will be attempted to reference and evaluate completely the literature on stress induced chain scission now up to 1985 86 References on other subjects such as morphology viscoelasticity plastic deformation and fracture mechanics where the treatment was never meant to be exhaustive have remained selective but they have been updated

Plasma Polymer Films Hynek Biederman, 2004 Annotation Plasma Polymer Films examines the current status of the deposition and characterization of fluorocarbon hydrocarbon and silicon containing plasma polymer films and nanocomposites with plasma polymer matrix It introduces plasma polymerization process diagnostics such as optical emission spectroscopy OES AOES and describes special deposition techniques such as atmospheric pressure glow discharge Important issues for applications such as degradation and stability are treated in detail and structural characterization basic electrical and optical properties and biomedical applications are discussed

Polymer Physics U.W. Gedde, 2013-12-11 This book is the result of my teaching efforts during the last ten years at the Royal Institute of Technology The purpose is to present the subject of polymer physics for undergraduate and graduate students to focus the fundamental aspects of the subject and to show the link between experiments and theory The

intention is not to present a compilation of the currently available literature on the subject Very few reference citations have thus been made Each chapter has essentially the same structure starting with an introduction continuing with the actual subject summarizing the chapter in 300-500 words and finally presenting problems and a list of relevant references for the reader The solutions to the problems presented in Chapters 1-12 are given in Chapter 13 The theme of the book is essentially polymer science with the exclusion of that part dealing directly with chemical reactions The fundamentals in polymer science including some basic polymer chemistry are presented as an introduction in the first chapter The next eight chapters deal with different phenomena processes and states of polymers The last three chapters were written with the intention of making the reader think practically about polymer physics How can a certain type of problem be solved What kinds of experiment should be conducted This book would never have been written without the help of my friend and adviser Dr Anthony Bristow who has spent many hours reading through the manuscript criticizing the content

Structure and Properties of Crosslinked Polymers Gasan M Magomedov, 2011-03-23 This book gives a fresh point of view on the curing processes structure and properties of crosslinked polymers The general view is that the structure and properties of crosslinked polymers are defined by their density this book demonstrates that the parameters are defined by the supermolecular a more precisely supersegmental structure of the crosslinked polymers The quantitative relationships of the structures properties are obtained for these polymers Using an epoxy polymer as a nanofiller for a nanocomposite is discussed and a new class of polymer is proposed The introduction of the nanofiller gives variation in the mechanical properties degree of crystallinity gas permeability and so on The use of these crosslinked polymers as natural nanocomposites is proposed Practical methods of crosslinked polymer s supersegmental structure regulation are considered and all the changes that this gives their properties are detailed This book will be of significance to all material scientists and students of material science
