Rajala,2011-11-01 This book integrates class environmental and political analysis to uncover the history of clearcutting in the Douglas fir forests of B C Washington and Oregon between 1880 and 1965 Part I focuses on the mode of production analyzing the technological and managerial structures of worker and resource exploitation from the perspective of current trends in labour process research Rajala argues that operators sought to neutralize the variable forest environment by emulating the factory model of work organization The introduction of steam powered overhead logging methods provided industry with a rudimentary factory regime by 1930 accompanied by productivity gains and diminished workplace autonomy for loggers After a Depression inspired turn to selective logging with caterpillar tractors timber capital continued its refinement of clearcutting technologies in the post war period achieving complete mechanization of yarding with the automatic grapple Drivining this process of innovation was a concept of industrial efficiency that responded to changing environmental conditions product and labour markets but sought to advance operators class interests by routinizing production The managerial component of the factory regime took shape in accordance with the principles of the early 20th century scientific management movement Requiring expertise in the organization of an expanded technologically sophisticated exploitation process operators presided over the establishment of logging engineering programs in the region s universities Graduates introduced rational planning procedures to coastal logging contributing to a rate of deforestation that generated a corporate call for technical forestry expertise after 1930 Industrial foresters then emerged from the universities to provide firms with data needed for long range investment decisions in land acquisition and management Part II constitutes an environmental and political history of clearcutting This reconstructs the process of scientific research concenring the factory regime s impact on the ecology of the Douglas fir forest assessing how knowledge was utitized in the regulation of cutting practices Analysis of business government relations in British Columbia Washington and Oregon suggests that the reliance of those client states on revenues generated by timber capital enouraged a pattern of regulation that served corporate rather than social and

Stevenson,Harold M. Armleder,André Arsenault,Darwyn Coxson,S. Craig DeLong,Michael Jull,2011-07-01 The vast temperate

rainforests of coastal British Columbia are world renowned but much less is known about the other rainforest located 500 kilometres inland along the western slopes of the interior mountains The unique integration of continentality and humidity in this region favours the development of lush rainforest communities that incorporate both coastal and boreal elements This book brings together for the first time a broad spectrum of information about the ecology management and conservation of this distinctive ecosystem Accessibly written and generously illustrated the chapters examine the physical social economic and ecological dimensions of the rainforest They also look at how the delicate balance of this ecosystem has been threatened by human use and climate change In the past governments encouraged the forest industry to clearcut the decadent old stands and replace them with rapidly growing young trees of other species More recently out of concern for the ecological consequences of such practices researchers have begun to examine alternative management strategies This book offers a vision that combines various strategies in order to balance the conservation of the inland rainforest as a fully functioning ecosystem with human use of its diverse resources

**MetroGreen** Donna Erickson, 2012-09-26 In metropolitan areas across the country you can hear the laments over the loss of green space to new subdivisions and strip malls But some city residents have taken unprecedented measures to protect their open land and a growing movement seeks not only to preserve these lands but to link them in green corridors Many land use and urban planning professionals along with landscape architects and environmental advocates have joined in efforts to preserve natural areas MetroGreen answers their call for a deeper exploration of the latest thinking and newest practices in this growing conservation field In ten case studies of U S and Canadian cities paired for comparative analysis Toronto and Chicago Calgary and Denver and Vancouver and Portland among them Erickson looks closely at the motivations and objectives for connecting open spaces across metropolitan areas She documents how open space networks have been successfully created and protected while also highlighting the critical human and ecological benefits of connectivity MetroGreen's unique focus on several cities rather than a single urban area offers a perspective on the political economic cultural and environmental conditions that affect open space planning and the outcomes of its implementation
