Organic Structures from Spectra L. D. Field, S. Sternhell, J. R. Kalman, 2012-12-27 The derivation of structural information from spectroscopic data is now an integral part of organic chemistry courses at all Universities A critical part of any such course is a suitable set of problems to develop the student s understanding of how structures are determined from spectra Organic Structures from Spectra Fifth Edition is a carefully chosen set of more than 280 structural problems employing the major modern spectroscopic techniques a selection of 27 problems using 2D NMR spectroscopy more than 20 problems specifically dealing with the interpretation of spin spin coupling in proton NMR spectra and 8 problems based on the quantitative analysis of mixtures using proton and carbon NMR spectroscopy All of the problems are

graded to develop and consolidate the student's understanding of organic spectroscopy. The accompanying text is descriptive and only explains the underlying theory at a level which is sufficient to tackle the problems. The text includes condensed tables of characteristic spectral properties covering the frequently encountered functional groups. The examples themselves have been selected to include all important common structural features found in organic compounds and to emphasise connectivity arguments. Many of the compounds were synthesised specifically for this purpose. There are many more easy problems to build confidence and demonstrate basic principles than in other collections. The fifth edition of this popular textbook includes more than 250 new spectra and more than 25 completely new problems, now incorporates an expanded suite of new problems dealing with the analysis of 2D NMR spectra: COSY, C-H Correlation spectroscopy, HMBC, NOESY and TOCSY has been expanded and updated to reflect the new developments in NMR and to retire older techniques that are no longer in common use. It provides a set of problems dealing specifically with the quantitative analysis of mixtures using NMR spectroscopy: features, proton NMR spectra obtained at 200, 400 and 600 MHz and ^{13}C NMR spectra include DEPT experiments as well as proton coupled experiments. It contains 6 problems in the style of the experimental section of a research paper and two examples of fully worked solutions. *Organic Structures from Spectra*, Fifth Edition, will prove invaluable for students of Chemistry, Pharmacy and Biochemistry taking a first course in Organic Chemistry. Contents: Preface, Introduction, Ultraviolet Spectroscopy, Infrared Spectroscopy, Mass Spectrometry, Nuclear Magnetic Resonance Spectroscopy, 2D NMR, Problems, Index, Reviews from earlier editions. Your book is becoming one of the go-to books for teaching structure determination here in the States. Great work! I would definitely state that this book is the most useful aid to basic organic spectroscopy teaching in existence and I would strongly recommend every instructor in this area to use it either as a source of examples or as a class textbook. *Magnetic Resonance in Chemistry*. Over the past year I have trained many students using problems in your book; they initially find it as a task. But after doing 3-4 problems with all their brains/activities working out, the rest of the problems become a mania. They get addicted to the problem solving and every time they solve a problem by themselves, their confident level also increases. I am teaching the fundamentals of Molecular Spectroscopy and your books represent excellent sources of spectroscopic problems for students. *Organic Structures from Spectra*, L. D. Field, S.

Sternhell, John R. Kalman, 2002-03-29. This introductory textbook covers all the major spectroscopic techniques that cover the derivation of structural information from spectroscopic data. It incorporates over 200 carefully selected problems that are graded to develop and consolidate the student's understanding of organic spectroscopy and to develop an understanding of how structures are derived. This, the third edition, has been thoroughly revised and updated and reflects the many developments in this area. It includes over 50 new problems and presents challenging examples that have been carefully selected to include all important structural features and to emphasise connectivity arguments. More emphasis on techniques is included in the problems and the advanced NMR topics section is expanded in the areas of decoupling and applications of

the nuclear overhauser effect nOe Brief and easy to read text providing sufficient detail of theory to be able to solve problems without going to excessive depth Large graded selection of problems from the very easy to challenging Provides hands on training for the non expert

Advanced Organic Spectroscopy Tools for Beginning Organic Spectroscopists Phil Beauchamp, 2016-09-20

The goal of this book is to show beginning organic students how to interpret modern organic spectra to solve challenging organic structures using IR MS ^1H ^{13}C DEPT and several 2D variations of NMR COSY HSQC HETCOR and HMBC Theory and instrumentation are not emphasized but are sufficiently explained so that students have a basic idea about how each method works Simulated spectra are used to remove real life complexities that make structures too difficult for beginners to solve It is exciting for beginning students to learn how to correctly generate an organic structure from a hodgepodge of lines and numbers This book will show how to do that A very specific plan of attack is presented to approach every problem in a step by step fashion including a one page worksheet to summarize and organize the information to help focus their thinking for every What if question that might arise Many simple problems are presented to show the mechanical steps of how each method is used to help solve organic structures More complex problems are designed to be simple enough for beginning students yet complex enough to require a sustained effort to solve using advanced NMR methods Real molecules are not used thereby avoiding the difficulties of overlapping peaks and or extraneous peaks that should not be there and or missing peaks that should be there Students will find a clear path to a correct structure without encountering real life frustrations Most of the common functional group features of organic chemistry are included Oxygen alcohols ethers esters nitrogen amines amides nitriles nitro halogens and or sulfur atoms are included at key locations so that chemical shifts are different enough to distinguish each type of proton and carbon in the ^1H ^{13}C COSY HETCOR HSQC and HMBC spectra This minimizes overlap so that the spectra are easier to interpret for beginning students It is really the various types of NMR spectra that solve a structure For the more complex problems ^1H ^{13}C DEPT COSY HETCOR HSQC and HMBC are included An IR chapter is included and a simulated IR is provided in structure problems to provide helpful functional group clues and details about how alkenes and or aromatic rings are substituted In the mass spectrometry chapter examples of the most common organic monofunctional groups are presented and discussed However in complex structure problems MS is mainly used to provide a molecular weight and indicate the presence of nitrogen chlorine bromine and or sulfur when they are present These clues can be used to obtain a molecular formula and degrees of unsaturation Pi bonds can be distinguished from rings using the ^{13}C which provides a good starting point for solving a structure Problems range from shorter structure problems that show how each technique can provide clues to solve a structure to intermediate level problems that require multiple techniques to very challenging structure problems that require all of the techniques presented in this book This workbook will work best for students who are learning basic organic structure determination and want or need to build on what they are learning to take it to the next level This can be accomplished in a classroom setting or through self study by motivated students If you are an

instructor who loves spectroscopy you might consider trying this approach in one of your course settings to judge for yourself if it works for you and your students If you are an interested student who can't get enough spectroscopy just have fun working problems
