Organisms Environments:

Organism and Environment Russell Winslow, 2017-08-29 *Organism and Environment* performs an examination into the way the contemporary life sciences are heralding a revolution of the most basic philosophical concepts of the Western world. Analyzing recent research in microbiology and evolution theory, the present book argues that these discourses are adding their voices to a growing chorus which is announcing a disruption if not an end to the understanding of the order of the world articulated in humanism. What does it mean to be a living substance? Are there such things as living individuals? How are living beings free? The discourses of microbiology, the medical sciences, and evolution theory are revealing a living organism that escapes the limited frame that Enlightenment humanism has traditionally used to answer these and other ontological questions. Appealing to the theoretical lenses provided by Michel Foucault, Hans Georg Gadamer, and Gilles Deleuze, *Organism and Environment* offers an interpretation of the way the contemporary life sciences are giving articulation to a posthuman ontological order.

Environments of Intelligence Hajo Greif, 2017-09-01 What is the role of the environment and of the information it provides in cognition? More specifically, may there be a role for certain artefacts to play in this context? These are questions that motivate 4E theories of cognition as being embodied, embedded, extended, enactive. In his take on that family of views, Hajo Greif first defends and refines a concept of information as primarily natural, environmentally embedded in character, which had been eclipsed by information processing views of cognition. He continues with an inquiry into the cognitive bearing of some artefacts that are sometimes referred to as intelligent environments. Without necessarily having much to do with Artificial Intelligence, such artefacts may ultimately modify our informational environments. With respect to human cognition, the most notable effect of digital computers is not that they might be able or become able to think, but that they alter the way we perceive, think, and act. NASA Technical Translation, 1959 *Perspectives in Ethology* P.P.G. Bateson, P.H. Klopfer, N.S. Thompson, 1993-09-30 The current volume focuses on behavioral similarities and differences within individual animals, larger populations, and species as a whole. Research from ecological, social, ontogenetic, physiological, and other perspectives is presented to explicate specific behaviors as well as to provide a more profound understanding of how behavior work influences thought about evolutionary processes.

Biocivilisations Predrag Slijepcevic, 2023-05-18 *Biocivilisations* is a fascinating original and important exploration into how complex civilisations existed on Earth long before humans. What is life? This is arguably the most important question in all of science. Many scientists believe life can be reduced to mechanistic factors such as genes and information codes. Everything can be sequenced and explained. But in a world as rich and complex as this one, can such an assertion really be true? A growing army of scientists, philosophers, and artists do not share this mechanistic vision for the science of life. The gene metaphor is not only too simplistic but also misleading. If there is a way to reduce life to a single principle, how does that

principle acknowledge the creativity of life that turns both genetic and information determinism on their heads

Biocivilisations is a groundbreaking book exploring the mysteries of life and its deep uncertainty Dr Predrag Slijepcevi turns anthropocentric scientific thinking on its head showing how the humble bacteria created the equivalent of cities and connected them with information highways bringing our planet to life three thousand million years ago He explains how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but also demonstrate elements of complex civilisation communication agriculture science art medicine and more that we associate with human achievement More than 99.99 percent of life on Earth has existed without humanity and life will continue without humans long into the future *Biocivilisations* is an important rethinking of the current scientific paradigm It challenges us to reconsider the limited scope and time window of our current scientific revolution and to fundamentally reimagine what we call life on Earth

The Mermaid's Tale Kenneth M. Weiss, Anne V. Buchanan, 2009-02-15 While competitive natural selection is widely assumed to be evolution's prime mover Weiss shows how life generally works on the basis of cooperation He reveals that focus on competition and cooperation is largely an artifact of compression of time a distortion that dissolves when life is viewed from developmental and evolutionary time scales

Efficient Cognition Armin W. Schulz, 2022-11-01 An argument that representational decision making is more cognitively efficient allowing an organism to adjust more easily to changes in the environment Many organisms including humans make decisions by relying on mental representations Not simply a reaction triggered by perception representational decision making employs high level non perceptual mental states with content to manage interactions with the environment A person making a decision based on mental representations for example takes a step back from her perceptions at the time to assess the nature of the world she lives in But why would organisms rely on representational decision making and what evolutionary benefits does this reliance provide to the decision maker In *Efficient Cognition* Armin Schulz argues that representational decision making can be more cognitively efficient than non representational decision making Specifically he shows that a key driver in the evolution of representational decision making is that mental representations can enable an organism to save cognitive resources and adjust more efficiently to changed environments After laying out the foundations of his argument

clarifying the central questions the characterization of representational decision making and the relevance of an evidential form of evolutionary psychology Schulz presents his account of the evolution of representational decision making and critically considers some of the existing accounts of the subject He then applies his account to three open questions concerning the nature of representational decision making the extendedness of decision making and when we should expect cognition to extend into the environment the specialization of decision making and the use of simple heuristics and the psychological sources of altruistic behaviors

Ary A. Hoffmann, Peter A. Parsons, 1997-07-10 Most natural populations intermittently experience extremely stressful conditions This book discusses how such conditions can cause periods of intense selection increasing both phenotypic and genetic variation and allowing organisms with novel characteristics to be first generated and then established in the population The authors argue that stressful conditions can have a major impact on the environment backing up their arguments with evidence from the fossil record They suggest further that as a consequence periods of stress must be taken into consideration when long term conservation strategies are planned particularly as stressful conditions are becoming increasingly prevalent as a result of human activities This broad overview will be of great interest to students and researchers in the field of evolutionary biology genetics ecology palaeontology and conservation biology

On the Verge of a Planetary Civilization Sam Mickey,2014-09-18 On the Verge of a Planetary Civilization presents a philosophical contribution to integral ecology an emerging approach to the field that crosses disciplinary boundaries of the humanities and sciences In this original book Sam Mickey argues for the transdisciplinary significance of philosophical concepts that facilitate understandings of and responses to the boundaries involved in ecological issues Mickey demonstrates how much the provocative French philosopher Gilles Deleuze contributes to the development of such concepts situating his work in dialogue with that of his colleagues Felix Guattari and Jacques Derrida and with theorists who are adapting his

concepts in contemporary contexts such as Isabelle Stengers Catherine Keller and the speculative realist movement of object oriented ontology The book focuses on the overlapping existential social and environmental aspects of the ecological problems pervading our increasingly interconnected planet It explores the boundaries between self and other humans and nonhumans sciences and humanities monism and pluralism sacred and secular fact and fiction the beginning and end of the world and much more
