Raising The Dead Organ Transplants Ethics And Society:

Raising the Dead Ronald Munson, 2002-01-17 With over 25 000 Americans receiving transplants annually this is a timely and dramatic account of organ transplants and the ethical and social issues they force society to confront

Raising the Dead Ronald Munson, 2002-01-17 Perhaps no medical breakthrough in the twentieth century is more spectacular more hope giving or more fraught with ethical questions than organ transplantation Each year some 25 000 Americans are pulled back from the brink of death by receiving vital new organs Another 5 000 die while waiting for them And what distinguishes these two groups has become the source of one of our thorniest ethical questions In *Raising the Dead* Ronald Munson offers a vivid often wrenchingly dramatic account of how transplants are performed how we decide who receives them and how we engage the entire range of tough issues that arise because of them Each chapter begins with a detailed account of a specific case Mickey Mantle's controversial liver transplant for example followed by careful analysis of its surrounding ethical questions the charges that Mantle received special treatment because he was a celebrity the larger problems involving how organs are allocated and whether alcoholics should have an equal claim on donor livers In approaching transplant ethics through specific cases Munson reminds us of the complex personal and emotional dimension that underlies such issues The book also ranges beyond our present capabilities to explore the future possibilities in xenotransplantation transplanting animal organs into humans and stem cell technology that would allow doctors to grow new organs from the patient's own cells Based on extensive scientific research but written with a novelist's eye for the human condition *Raising the Dead* shows readers the reality of organ transplantation now the possibility of what it may become and how we might respond to the ethical challenges it forces us to confront

The Philosophy and Practice of Medicine and Bioethics Barbara Maier, Warren A. Shibles, 2010-11-03 This book challenges the unchallenged methods in medicine such as evidence based medicine which claim to be but often are not scientific It completes medical care by adding the comprehensive humanistic perspectives and philosophy of medicine No specific or absolute recommendations are given regarding medical treatment moral approaches or legal advice Given rather is discussion about each issue involved and the strongest arguments indicated Each argument is subject to further critical analysis This is the same position as with any philosophical medical or scientific view The argument that decision making in medicine is inadequate unless grounded on a philosophy of medicine is not meant to include all of philosophy and every philosopher On the contrary it includes only sound practical and humanistic philosophy and philosophers who are creative and critical thinkers and who have concerned themselves with the topics relevant to medicine These would be those philosophers who engage in practical philosophy such as the pragmatists humanists

naturalists and ordinary language philosophers A new definition of our own philosophy of life emerges and it is necessary to have one Good lifestyle no longer means just abstaining from cigarettes alcohol and getting exercise It also means living a holistic life which includes all of one s thinking personality and actions This book also includes new ways of thinking In this regard the Metaphorical Method is explained used and exemplified in depth for example in the chapters on care egoism and altruism letting die etc *Organ Transplants* Tina P. Schwartz,2005-04-20 Talks to teens and offers practical advice and suggestions for coping with and surviving the situation of when a family member has an organ transplant or when they are personally facing an organ transplant It covers how to deal with events that happen before during and after the surgery

Who Says You're Dead? Jacob M. Appel,2019-10-08 An original compelling and provocative exploration of ethical issues in our society with thoughtful and balanced commentary I have not seen anything like it Alan Lightman author of *Einstein s Dreams* Drawing upon the author s two decades teaching medical ethics as well as his work as a practicing psychiatrist this profound and addictive little book offers up challenging ethical dilemmas and asks readers What would you do A daughter gets tested to see if she s a match to donate a kidney to her father The test reveals that she is not the man s biological daughter Should the doctor tell the father Or the daughter A deaf couple prefers a deaf baby Should they be allowed to use medical technology to ensure they have a child who can t hear Who should get custody of an embryo created through IVF when a couple divorces Or when you or a loved one is on life support Who says you re dead In short engaging scenarios Dr Appel takes on hot button issues that many of us will confront genetic screening sexuality privacy doctor patient confidentiality He unpacks each hypothetical with a brief reflection drawing from science philosophy and history explaining how others have approached these controversies in real world cases *Who Says You re Dead* is designed to defy easy answers and to stimulate thought and even debate among professionals and armchair ethicists alike **Hidden Histories of the**

Dead Elizabeth T. Hurren,2021-02-25 In this discipline redefining book Elizabeth T Hurren maps the post mortem journeys of bodies body parts organs and brains inside the secretive culture of modern British medical research after WWII as the bodies of the deceased were harvested as bio commons Often the human stories behind these bodies were dissected discarded or destroyed in death *Hidden Histories of the Dead* recovers human faces and supply lines in the archives that medical science neglected to acknowledge It investigates the medical ethics of organ donation the legal ambiguities of a lack of fully informed consent and the shifting boundaries of life and re defining of medical death in a biotechnological era Hurren reveals the implicit explicit and missed body disputes that took second place to the economics of the national and international commodification of human material in global medical sciences of the Genome era This title is also available as Open Access *Current Controversies in the Biological Sciences* Karen F. Greif,Jon F. Merz,2007-02-23 In recent years advances in biological science and technology have outpaced policymakers attempts to deal with them *Current Controversies in the Biological Sciences* examines the ways in which the federal government uses scientific information in reaching policy

decisions providing case studies of the interactions between science and government on different biomedical biological and environmental issues These case studies document a broad range of complex issues in science policy from the Human Genome Project to tobacco regulation and provide an accessible overview of both the science behind the issues and the policy making process The cases illustrate the different ways in which science and politics intersect in policy decisions as well as the different forms policy itself may take including not only regulatory action but the lack of regulation Among the topics examined are public and private research funding as seen in gene patenting reluctance to regulate even when a product has been proven unhealthy as in the case of tobacco a comparison of U S and international policy responses to genetically modified organisms and the competing interests at play in air pollution policy Each chapter includes shorter side essays on related topics for example essays on issues raised by the SARS epidemic accompany the detailed case study of the public health response to the anthrax laced mail received in the weeks after 9 11 This clear and readable introduction to controversial issues in the biological sciences will be a valuable resource for students of science policy and bioethics and for professionals in industry government and nongovernmental organizations who need background on emerging issues in the biological sciences

International Legal Personality Fleur Johns, 2017-07-05 Who or what is entitled to act on the international plane Where should responsibility for violations of international law lie What sort of entities are capable of possessing international legal rights What is the status of individuals minority groups non governmental bodies international organisations and animals in the international legal order and how has their status shifted over time *International Legal Personality* contains fourteen articles that address these and related questions In historical and contemporary writings international lawyers grapple with the nature of legal identity and confront global distributions of authority and responsibility as they explore who or what is a person in the international legal order These essays document the emergence of an international legal order increasingly conceived in terms of patterns and probabilities rather than as the stagecraft of a small company of permanent players

The Global Organ Shortage T. Randolph Beard, David L. Kaserman, Rigmar Osterkamp, 2013-01-09 Although organ transplants provide the best and often the only effective therapy for many otherwise fatal conditions the great benefits of transplantation go largely unrealized because of failures in the organ acquisition process In the United States for instance more than 10 000 people die every year either awaiting transplantation or as a result of deteriorating health exacerbated by the shortage of organs Issues pertaining to organ donation and transplantation represent perhaps the most complex and morally controversial medical dilemmas aside from abortion and euthanasia However these quandaries are not unsolvable This book proposes compensating organ donors within a publicly controlled monopsony This proposal is quite similar to current practice in Spain where compensation for cadaveric donation now occurs in secret as this text reveals To build their recommendations the authors provide a medical history of transplantation a history of the development of national laws and waiting lists a careful examination of the social costs and benefits of transplantation a discussion of the causes of organ shortages an evaluation of partial reforms tried or proposed an extensive ethical evaluation of the current system and its competitors
