Exploration of Space National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Commission on Physical Sciences, Mathematics, and Applications, Committee on Human Exploration, 1998-01-30

During 1988 the National Research Council's Space Science Board reorganized itself to more effectively address NASA's advisory needs. The Board's scope was broadened; it was renamed the Space Studies Board and among other new initiatives the Committee on Human Exploration was created. The new committee was intended to focus on the scientific aspects of human exploration programs rather than engineering issues. Their research led to three reports: *Scientific Prerequisites for the Human Exploration of Space* published in 1993, *Scientific Opportunities in the Human Exploration of Space* published in 1994, and *Science Management in the Human Exploration of Space* published in 1997. These three reports are collected and reprinted in this volume in their entirety as originally published.

Exploring Space William E. Burrows, 1990. Profiles the technical and scientific accomplishments of the U.S. Space program.

Bioastronautics and the Exploration of Space Theodore C. Bedwell, Hubertus Strughold, 1965. The symposium is focused on manned space flight and is primarily concerned with the life and the performance capability of the astronauts. The program of the conference is not confined to the life sciences alone but examines the space environment, man-machine complex, and includes a discussion of technology, astrophysics, and astronomy, earth-based and space-bound.

Space Exploration: why and how Edgar M. Cortright, 1965

Space Exploration Richard Brownell, 2012-12-07. Humans have always wondered about the nature of the universe outside the tangible reaches of Earth. Not until the twentieth century could space be explored in earnest as advances in rocket, computer, and optical technologies made crewed travel outside the atmosphere possible. Yet even after humans walked on the moon, space continues to hold many secrets that can enrich our understanding of the universe we live in. Author Richard Brownell offers a compelling account of space exploration as it has evolved and sharpened its focus. Chapters discuss the evolution of astronomy, early attempts at manned flight, the race between the Soviet Union and the United States to land on the moon, the advances in science yielding from space exploration that have changed life on Earth, and the future of space exploration as space programs contract and budgets tighten.
