Embedded Software Verification and Debugging Djones Lettnin, Markus Winterholer, 2017-04-17 This book provides comprehensive coverage of verification and debugging techniques for embedded software which is frequently used in safety critical applications e.g. automotive where failures are unacceptable. Since the verification of complex systems needs to encompass the verification of both hardware and embedded software modules, this book focuses on verification and debugging approaches for embedded software with hardware dependencies. Coverage includes the entire flow of design verification and debugging of embedded software and all key approaches to debugging dynamic static and hybrid verification. This book discusses the current industrial embedded software verification flow as well as emerging trends with focus on formal and hybrid verification and debugging approaches.

Applications of Flower Pollination Algorithm and its Variants Nilanjan Dey, 2021-03-17 This book presents essential concepts of traditional Flower Pollination Algorithm (FPA) and its recent variants and also its application to find optimal solution for a variety of real world engineering and medical problems. Swarm intelligence based meta heuristic algorithms are extensively implemented to solve a variety of real world optimization problems due to its adaptability and robustness. FPA is one of the most successful swarm intelligence procedures developed in 2012 and extensively used in various optimization tasks for more than a decade. The mathematical model of FPA is quite straightforward and easy to understand and enhance compared to other swarm approaches. Hence FPA has attracted attention of researchers who are working to find the optimal solutions in variety of domains such as N dimensional numerical optimization, constrained, unconstrained optimization and linear nonlinear optimization problems. Along with the traditional bat algorithm, the enhanced versions of FPA are also considered to solve a variety of optimization problems in science, engineering and medical applications.

Family-Focused Treatment for Child and Adolescent Mental Health Paul Sunseri, 2023-12-22 This book is designed as a treatment manual for using family based treatments with children struggling with mental illness, supporting both family therapists and the families they are helping. Based on over 40 years of research, it has been shown that involving the entire family in treatment is effective. However, family therapy is still not used as a first line of treatment. Paul Sunseri explains and explores why family based approaches should be used with struggling young people and how this can be applied in practice. Chapters discuss the causes, contributors and social determinants for the rise in childhood mental illness and provide empirical evidence and treatments for working with children and adolescents suffering from self-harm, suicidal ideation, anxiety, anger and depression. Filled with case studies throughout the book, it also touches on mitigating the effects of screen time in our increasingly technological lives and interventions to help reluctant children participate in therapy. This book will be invaluable reading for graduate level students, clinicians in training and fully licensed clinicians such as psychologists, psychiatrists, marriage and family therapists and clinical social workers. The book is also a practical resource for parents and other caregivers; it pulls back the curtain on therapy and teaches parents exactly what to
