Reusable Launch Vehicle Technology Development And Test Program:

Reusable Launch Vehicle Committee on Reusable Launch Vehicle Technology and Test Program, Commission on Engineering and Technical Systems, Division on Engineering and Physical Sciences, National Research Council, 1996-01-22 The key to opening the use of space to private enterprise and to broader public uses lies in reducing the cost of the transportation to space More routine affordable access to space will entail aircraft like quick turnaround and reliable operations Currently the space Shuttle is the only reusable launch vehicle and even parts of it are expendable while other parts require frequent and extensive refurbishment NASA s highest priority new activity the Reusable Launch Vehicle program is directed toward developing technologies to enable a new generation of space launchers perhaps but not necessarily with single stage to orbit capability This book assesses whether the technology development test and analysis programs in propulsion and materials related technologies are properly constituted to provide the information required to support a December 1996 decision to build the X 33 a technology demonstrator vehicle and suggest as appropriate necessary changes in these programs to ensure that they will support vehicle feasibility goals *Future Aeronautical and Space Systems* Ahmed Khairy Noor, Samuel L. Michael A. Rampino,1997 The United States is embarked on a journey toward maturity as a spacefaring nation One key step
along the way is development of a reusable launch vehicle RLV The most recent National Space Transportation Policy August
1994 assigned improvement and evolution of current expendable launch vehicles to the Department of Defense while
National Aeronautical Space Administration NASA is responsible for working with industry on demonstrating RLV technology
The purpose of this study is to help ensure the US military especially the USAF is prepared to take advantage of RLVs should
the NASA led effort to develop an RLV demonstrator prove successful The focus of this study is an explanation of how the US
military could use RLVs by describing and analyzing two concepts of operations Four major conclusions resulted from the
analysis First RLVs have military potential They can perform a variety of missions including responsive spacelift
reconnaissance and strike However the economic feasibility of using RLVs for earth to earth transportation is questionable
Second design choices for an operational RLV will have effects on risk cost capability and operations efficiency Trade offs will
have to be made between NASA commercial and military requirements if all three parties are to use the same fleet of RLVs
Third increased investment in propulsion technology development is warranted to ensure success Fourth the top priority for
the RLV program even from the military s perspective should remain cheap and responsive access to space The research led
to three recommendations First the US military should become a more active participant in the RLV program to ensure its
requirements are defined and incorporated Second America should not pursue development of operational RLVs before the
technology is ready **Department of Defense Appropriations** United States. Congress. House. Committee on
