Software Reuse: Methods, Techniques, and Tools Cristina Gacek, 2003-08-01 As a result of the open source movement there is now a great deal of reusable software available in the public domain This offers significant functionality that commercial software vendors can use in their software projects Open source approaches to software development have illustrated that complex mission critical software can be developed by distributed teams of developers sharing a common goal Commercial software vendors have an opportunity to both learn from the op source community as well as leverage that knowledge for the benefit of its commercial clients Nonetheless the open source movement is a diverse collection of ideas knowledge techniques and solutions As a result it is far from clear how these approaches should be applied to commercial software engineering This paper has looked at many of the dimensions of the open source movement and provided an analysis of the different opportunities available to commercial software vendors

References and Notes 1 It can be argued that the open source community has produced really only two essential 9 products Apache undeniably the most popular web server and Linux although both are essentially reincarnations of prior systems Both are also somewhat products of their times Apache filled a hole in the then emerging Web at a time no platform vendor really knew how to step in and Linux filled a hole in the fragmented Unix market colored by the community s general anger against Microsoft 2 Evans Marketing Services Linux Developers Survey Volume 1 March

Scientific and Technical Aerospace Reports, 1995 **Knowledge Acquisition, Modeling and Management** Rudi Studer, 2003-06-29 Past Present and Future of Knowledge Acquisition This book contains the proceedings of the 11th

European Workshop on Knowledge Acquisition Modeling and Management EKAW 99 held at Dagstuhl Castle Germany in May of 1999 This continuity and the high number of submissions reflect the mature status of the knowledge acquisition community Knowledge Acquisition started as an attempt to solve the main bottleneck in developing expert systems now called knowledge based systems Acquiring knowledge from a human expert Various methods and tools have been developed to improve this process These approaches significantly reduced the cost of developing knowledge based systems However these systems often only partially fulfilled the task they were developed for and maintenance remained an unsolved problem This required a paradigm shift that views the development process of knowledge based systems as a modeling activity Instead of simply transferring human knowledge into machine readable code building a knowledge based system is now viewed as a modeling activity A so called knowledge model is constructed in interaction with users and experts This model need not necessarily reflect the already available human expertise Instead it should provide a knowledge level characterization of the knowledge that is required by the system to solve the application task Economy and quality in system development and maintainability are achieved by reusable problem solving methods and ontologies The former describe the reasoning process of the knowledge based system i.e. the algorithms it uses and the latter describe the knowledge structures it uses i.e. the data structures Both abstract from specific application and domain specific circumstances to enable knowledge reuse
