**Caveman Chemistry** Kevin M. Dunn, 2003 Half a million years ago our ancestors learned to make fire from scratch They crafted intricate tools from stone and brewed mind altering elixirs from honey Their descendants transformed clay into pottery wool into clothing and ashes into cleansers In ceramic crucibles they won metal from rock the metals lead to colored glazes and glass Buildings of brick and mortar enshrined books of parchment and paper Kings and queens demanded ever more colorful clothing and accessories in order to out class clod hoppers and call girls Kingdoms rose and fell by the power of saltpeter sulfur and charcoal And the demands of everyday folk for glass and paper and soap stimulated the first round of chemical industrialization From sulfuric acid to sodium carbonate From aniline dyes to analgesic drugs From blasting powder to fertilizers and plastics In a phrase From Caveman to Chemist Your guides on this journey are the four alchemical elements Fire Earth Air and Water These archetypical characters deliver first hand accounts of the births of their respective technologies The spirit of Fire for example was born in the first creature to cultivate the flame This spirit passed from one person to another from one generation to another from one millennium to another arriving at last in the pages of this book The spirit of Earth taught folks to make tools of stone the spirit of Air imparted knowledge of units and the spirit of Water began with the invention of spirits Having traveled the world from age to age who can say where they will find their next home Perhaps they will find one in you

**Mathematical Stereochemistry** Shinsaku Fujita, 2015-08-17 Mathematical Stereochemistry uses both chemistry and mathematics to present a challenge towards the current theoretical foundations of modern stereochemistry that up to now suffered from the lack of mathematical formulations and minimal compability with chemoinformatics The author develops novel interdisciplinary approaches to group theory Fujita s unit subdued cycle index USCI and his prolignand method before focussing on stereoisograms as a main theme The concept of RS stereoisomers functions as a rational theoretical foundation for remedying conceptual faults and misleading terminology caused by conventional application of the theories of van t Hoff and Le Bel This book indicates that classic descriptions on organic and stereochemistry in textbooks should be thoroughly revised in conceptionally deeper levels The proposed intermediate concept causes a paradigm shift leading to the reconstruction of modern stereochemistry on the basis of mathematical formulations Provides a new theoretical framework for the reorganization of mathematical stereochemistry Covers point groups and permutation symmetry and exemplifies the concepts using organic molecules and inorganic complexes Theoretical foundations of modern stereochemistry for chemistry students and researchers as well as mathematicians interested in chemical application of mathematics Shinsaku Fujita has been Professor of Information Chemistry and Materials Technology at the Kyoto Institute of Technology from 1997 2007 before starting the Shonan Institute of Chemoinformatics and Mathematical Chemistry as a private laboratory
