Against Prediction Bernard E. Harcourt, 2008-09-15 From random security checks at airports to the use of risk assessment in sentencing actuarial methods are being used more than ever to determine whom law enforcement officials target and punish And with the exception of racial profiling on our highways and streets most people favor these methods because they believe they re a more cost effective way to fight crime In *Against Prediction* Bernard E Harcourt challenges this growing reliance on actuarial methods These prediction tools he demonstrates may in fact increase the overall amount of crime in society depending on the relative responsiveness of the profiled populations to heightened security They may also aggravate the difficulties that minorities already have obtaining work education and a better quality of life thus perpetuating the pattern of criminal behavior Ultimately Harcourt shows how the perceived success of actuarial methods has begun to distort our very conception of just punishment and to obscure alternate visions of social order In place of the actuarial he proposes instead a turn to randomization in punishment and policing The presumption Harcourt concludes should be against prediction **All My Relations: Understanding the Experiences of Native Americans with Disabilities** Hilary

of settings from remote rural areas to reservations to college campuses the authors are attentive to the impact of specific environments on their inhabitants Taking into account both physical and social environment and recognizing the importance of cultural context this book is a good starting point for anyone interested in developing a better understanding of the experience of Native peoples living with disabilities This book was originally published as a special issue of the Journal of Social Work in Disability Rehabilitation
