Security And Persistence Workshops In Computing:

Security and Persistence John Rosenberg, J. Leslie Keedy, 2012-12-06 During a short visit to Bremen in December 1989 John Rosenberg had several discussions with me about computer architecture. Although we had previously worked together for more than a decade in Australia we had not seen each other for over a year following my move to Bremen in 1988. Meanwhile John was spending a year on study leave at the University of St Andrews in Scotland with Professor Ron Morrison and his persistent programming research group. From our conversations it was quite clear that John was having a most fruitful time in St Andrews and was gaining valuable new insights into the world of persistent programming. He was very keen to explore the significance of these insights for the MONADS Project which we had been jointly directing since the early 1980s. MONADS was not about persistent programming. In fact it had quite different origins in the areas of software engineering and information protection. In an earlier stage of the project our ideas on these themes had led us into the world of computer architecture and even hardware design in our attempts to provide an efficient base machine for our software ideas. The most important practical result of this phase of the project had been the development of the MONADS PC, a mini computer which would be better compared with say a V tv.

7th UK Computer and Telecommunications Performance Engineering Workshop Jane E. Hillston, Peter J.B. King, Robert J. Pooley, 2013-06-29 Performance engineering is a fast moving field where advances in technology mean that new issues constantly need to be addressed. In response to this the UK Computer and Telecommunications Performance Engineering workshops were set up in 1985 to provide a valuable opportunity for the discussion and exchange of ideas. They have subsequently become well established as the focus for academic and industrial practitioners from the UK and Europe with an interest in performance and modelling and analysis. This volume contains the 16 papers which were presented at the 7th annual workshop held in Edinburgh in July 1991. The workshop highlighted various aspects of parallel computing, an area which is attracting an increasing amount of interest and the work presented in these papers is of particular interest as the contributors used real analysis to evaluate their models. The papers cover an unusually wide range of topics both practical and theoretical including advances in queueing theory, common performance problems and their solutions, assessments of available tools and presentations of new theoretical results. The result is an extremely comprehensive coverage of this important and challenging field. This volume provides an up to date assessment of work being carried out by performance engineers in the UK and Europe and will be an invaluable reference book for researchers and practitioners wishing to familiarise themselves with the benefits of performance and analysis.

Fully Integrated Data Environments Malcolm P. Atkinson, Ray Welland, 2012-12-06 Research into Fully Integrated Data Environments (FIDE) has the goal of substantially improving the quality of application systems while reducing the cost of building and maintaining them. Application systems invariably involve the long term storage of data over months or years. Much unnecessary complexity obstructs the construction of these systems when conventional databases file systems

operating systems communication systems and programming languages are used This complexity limits the sophistication of the systems that can be built generates operational and usability problems and deleteriously impacts both reliability and performance This book reports on the work of researchers in the Esprit FIDE projects to design and develop a new integrated environment to support the construction and operation of such persistent application systems It reports on the principles they employed to design it the prototypes they built to test it and their experience using it **Persistent Object Systems** Antonio Albano,Ron Morrison,2012-12-06 **Cryptographic Security Architecture** Peter Gutmann,2007-05-08 A cryptographic security architecture is the collection of hardware and software that protects and controls the use of encryption keys and similar cryptovariables It is the foundation for enforcing computer security policies and controls and preempting system misuse This book provides a comprehensive design for a portable flexible high security cryptographic architecture with particular emphasis on incorporating rigorous security models and practices Cryptographic Security Architecture unveils an alternative means of building a trustworthy system based on concepts from established software engineering principles and cognitive psychology Its novel security kernel design implements a reference monitor that controls access to security relevant objects and attributes based on a configurable security policy Topics and features Builds a concise architectural design that can be easily extended in the future Develops an application specific security kernel that enforces a fully customizable rule based security policy Presents a new verification technique that allows verification from the high level specification down to the running code Describes effective security assurance in random number generation and the pitfalls associated therewith Examines the generation and protection of cryptovariables as well as application of the architectural design to cryptographic hardware The work provides an in depth presentation of a flexible platform independent cryptographic security architecture suited to software hardware and hybrid implementations Security design practitioners professionals researchers and advanced students will find the work an essential resource *Computer Security* Matthew A. Bishop,Matt Bishop,2003 The importance of computer security has increased dramatically during the past few years Bishop provides a monumental reference for the theory and practice of computer security Comprehensive in scope this book covers applied and practical elements theory and the reasons for the design of applications and security techniques **Computer Security** John S. Potts,2002 We live in a wired society with computers containing and passing around vital information on both personal and public matters Keeping this data safe is of paramount concern to all Yet not a day seems able to pass without some new threat to our computers Unfortunately the march of technology has given us the benefits of computers and electronic tools while also opening us to unforeseen dangers Identity theft electronic spying and the like are now standard worries In the effort to defend both personal privacy and crucial databases computer security has become a key industry A vast array of companies devoted to defending computers from hackers and viruses have cropped up Research and academic institutions devote a considerable amount of time and effort to the study of information systems and

computer security Anyone with access to a computer needs to be aware of the developing trends and growth of computer security To that end this book presents a comprehensive and carefully selected bibliography of the literature most relevant to understanding computer security Following the bibliography section continued access is provided via author title and subject indexes With such a format this book serves as an important guide and reference tool in the defence of our computerised culture

6th Refinement Workshop David Till, 2012-12-06 The Sixth Refinement Workshop took place at City University in London from 5th to 7th January 1994 The present volume includes all of the papers which were submitted and accepted for presentation together with two papers by invited speakers The workshops in the series have generally occurred at one year intervals but in this last case a two year period had elapsed These workshops have established themselves as an important event in the calendar for all those who are interested in progress in the underlying theory of refinement and in the take up by industry of the methods supported by that theory One of the proposed themes of the sixth workshop was the reporting of successful adoption in industry of rigorous software development methods The programme committee was perhaps slightly disappointed by the response from industry to the call in this respect However the recent period could be characterised as one of consolidation when those companies which have made the decision that formal development methods are important to their business have been adopting them where appropriate and finding them to be worthwhile On the other hand the difficult economic climate which exists in most parts of the developed world is perhaps not the context within which companies still dubious about the benefits are going to opt for making major changes in their working practices

Women into Computing

Gillian Lovegrove, Barbara Segal, 2013-06-29 This book contains the majority of the papers presented at the 1990 Women into Computing Conference together with selected papers from the 1989 and 1988 Conferences. In 1988 the main theme running through the Conference was that of dismay at the low number of women taking computing courses or following computing careers. The 1989 Conference was concerned solely with workshops for schoolgirls and the 1990 Conference concentrated on strategies rather than an assessment of the situation. As editors we set as our task to make a selection of papers presenting the overall picture in 1990. We found that many of the issues discussed in 1988 are still a cause for concern in 1990 but that strategies to improve the situation are many and varied. Section I contains speeches from the invited speakers and needs little introduction. Section II contains papers covering some attitudes and issues of concern ranging from the specific: Gill Russell on child care and Laurie Keller on hacker mentality through to broader aspects of gender inequality: the papers of Flis Henwood, Margaret Bruce and Alison Adam and Lyn Bryant. Susan Jones takes a look at the reasons why we should want to see more women in computing whilst Gillian Lovegrove and Wendy Hall present a more general paper on school and higher education.
