February 28, 2017

PORTFOLIO PERFORMANCE EVALUATION

Portfolio evaluation is the last step in the process of portfolio management. Portfolio evaluation is the stage where we examine to what extent the objective has been achieved. Through portfolio evaluation the investor tries to find out how well the portfolio has performed. The portfolio of securities held by an investor is the result of his investment decision. Portfolio evaluation is really a study of the impact of such decisions. Without portfolio evaluation portfolio management would be incomplete.

Meaning:

Portfolio evaluation refers to the evaluation of the performance of the portfolio. It is essentially the process of comparing the return earned on a portfolio with the return earned on one or more other portfolios or on a benchmark portfolio.

Portfolio evaluation comprises two functions: performance measurement and performance evaluation.

Performance measurement is an accounting function which measures the return earned on a portfolio during the holding period or investment period.

Performance evaluation addresses such issues as whether the performance was superior or inferior, whether the performance was due to skill or luck, etc.

While evaluating the performance of a portfolio the return earned on the portfolio has to be evaluated in the context of the risk associated with that portfolio. One approach would be to group portfolios into equivalent risk classes and then compare returns of portfolios within each risk category. An alternative approach would be to specifically adjust the return for the riskiness of the portfolio by developing risk adjusted return measure and use these for evaluating portfolios across differing risk levels.

Need for evaluation:

Evaluation is an appraisal of performance. Whether the investment activity is carried out by individual investors themselves or through mutual funds and investment companies, different situations arise where evaluation of performance becomes imperative. These situations are discussed below:

1. **Self evaluation:** where individual investors undertake the investment activity on their own, the investment decisions are taken by them. They construct and manage their own portfolio of securities. In such a situation, an investor would like to evaluate the performance of his portfolio in order to identify the mistakes committed by him. This self evaluation will enable him to improve his skills and achieve better performance in future.
2. **Evaluation of portfolio managers:** a mutual fund or investment company usually creates different portfolios with different objectives aimed at different sets of investors. Each such portfolio may be entrusted to different professional portfolio managers who are responsible for the investment decisions regarding the portfolio entrusted to each of them. In such a situation, the organization would like to evaluate the performance of each portfolio so as to compare the performance of different managers.
3. **Evaluation of mutual funds:** investors and organizations desirous of placing their funds with mutual funds would like to know the comparative performance of each so as to select the best mutual fund or investment company. For this, evaluation of the performance of mutual funds and their portfolios becomes necessary.

Evaluation perspective:

Evaluation may be carried from different perspective or viewpoints such as—

1. **Transaction view:** an investor may attempt to evaluate every transaction of purchase and sale of securities. Whenever, a security is bought and sold, the transaction is evaluated as regards its correctness
