Sedimentology And Ore Genesis Developments In Sedimentology Volume :

Syngeneses and Epigenesis in the Formation of Mineral Deposits A. Wauschkuhn, C. Kluth, R.A.

Zimmermann, 2012-12-06 The papers in this volume are dedicated to Professor Dr Dr h c G Christian Amstutz by his colleagues friends and students on the occasion of his 60th anniversary The authors of this book the theme was restricted to syngeneses and epigenesis in the formation of mineral deposits wish to honour with their articles a scientist who has contributed to and substantially promoted the understanding of the genesis of mineral deposits in the last decades The majority of the articles deal with strata bound deposits thus reflecting one of his main scientific interests In the tradition of his professors Paul Niggli and Paul Ramdohr G C Amstutz has maintained an open and active interest in many fields of earth science His numerous papers have triggered a remarkable number of new ideas and investigations in a variety of fields and the happy marriage of economic geology with sedimentology is certainly one of his main successes starting with the first Symposium on Sedimentology and Ore Genesis at the Sixth International Sedimentological Congress at Delft in 1963 *Ore Genesis* G.C. Amstutz, A. El Goresy, G. Frenzel, C. Kluth, G. Moh, A. Wauschkuhn, R.A. Zimmermann, 2012-12-06

Geodynamics and Ore Deposit Evolution in Europe D. Blundell, N. Arndt, P.R. Cobbold, C. Heinrich, 2006-02-07

This book presents a new synthesis of the major metallogenic provinces of Europe and the geodynamic processes involved that can lead to the formation of world class ore deposits It represents the culmination of a 5 year research programme GEODE set up by the European Science Foundation that brought together researchers across Europe from a wide range of disciplines into collaborative research projects They focused on five metallogenic provinces across Europe the Precambrian Fennoscandian Shield the Upper Palaeozoic Urals the Variscides of France and SW Iberia the Alpine Balkan Carpathian Dinaride belt and sediment hosted deposits of Europe Because of the long and well known tectonic history of Europe and the diversity of ore deposits linkages between geodynamics and ore deposit evolution have been established and new insights into mineralizing fluids and ore formation processes have been gained Presented as a set of individual review papers and a final synthesis this book offers a coherent and structured appraisal of geodynamics and metallogeny in Europe with valuable lessons for mineral exploration and research throughout the world **Sediment-Hosted Zn-Pb Ores** Lluís Fontbote, Maria Boni, 2013-03-09

Sediment hosted deposits are the main source of zinc and lead In this volume the reader will find the most recent developments in research including Fluid migration leading to formation of Zn Pb ores in sedimentary basins Relationships to orogenic events and to geothermic anomalies Transport of metals and precipitation mechanisms The role played by fluid mixing fluid rock reaction organic matter and thiosulfates Paleomagnetic dating of ore deposits The association of Mississippi Valley type ore deposits to diapiric salt structures Geochemical investigations applied to exploration for sediment hosted Zn Pb deposits Economic aspects The broad geographical coverage is an additional aspect which will interest both researchers and explorationists U.S. Geological Survey Bulletin , 1983 **Ores in Sediments**

G.C. Amstutz, A.J. Bernard, 2012-12-06 In 1963 the first Symposium on Ores in Sediments took place as part of an International Sedimentological Congress At the end of that first Symposium the group then assembled adopted a resolution printed in the book which resulted from it AM STUTZ 1964 p 7 and points 3 4 and 5 read as follows 3 The group considers the integration of sedimentology in any study of ore deposits in sediments essential to a correct interpretation A study of the role of sedimentary processes including diagenesis is an important field in pure as well as in applied research on the genesis of mineral deposits 4 In particular the group also considers the knowledge of sedimentary rocks and processes in regard to both the fabric and the geochemical detail a prerequisite for the understanding of subsequent metamorphic processes and their possible role in the deformation and reconstitution of mineral deposits and host rocks 5 The group suggests that similar symposia could with advantage be held at future Congresses of the International Association of Sedimentologists The Editors wish to thank the International Association of Sedimentology for including another Symposium on ore minerals in its Congress program Mineral Resources of the Mount Zirkel Wilderness and Northern Park Range Vicinity, Jackson and Routt Counties, Colorado Edward Joseph Young, George Leonard Snyder, Paul T. Robinson, J. H. Stewart, Lowell L. Patten, Jeffrey J. Daniels, 1984 Geological Survey Bulletin, 1987 **Diagenesis, I** G.V. Chilingarian, K.H. Wolf, 1988-07-01 Diagenesis is a highly developed interdisciplinary field of study It is reciprocal in that it borrows from numerous scientific or technological specialties and then in turn repays them with useful results Too often however the information gained and concepts developed remain unintegrated instead of being utilized quickly by several related earth science fraternities This volume the first of a multi volume work attempts to bring together such information thereby assisting the individual and the research group in keeping up with the data explosion There is no end in sight to diagenetic research because of its wide practical and intellectual appeals Consequently periodic reviews such as presented in this volume are greatly needed
