Seed Of Light:

Principles of Seed Science and Technology Lawrence O. Copeland, Miller F. McDonald, 2012-12-06 This Third Edition of Principles of Seed Science and Technology like the first two editions is written for the advanced undergraduate student or lay person who desires an introduction to the science and technology of seeds. The first eight chapters present the seed as a biological system and cover its origin, development, composition, function, and sometimes nonfunction, performance, and ultimate deterioration. The last seven chapters present the fundamentals of how seeds are produced, conditioned, evaluated, and distributed in our modern agricultural society. A new chapter on seed enhancement has been added to reflect the significant advancements made in the last 10 years on new physiological and molecular biology techniques to further enhance seed performance. Because of the fundamental importance of seeds to both agriculture and to all of society, we have taken great care to present the science and technology of seeds with the respect and feeling this study deserves. We hope that this feeling will be communicated to our readers. Furthermore, we have attempted to present information in a straight forward, easy to read manner that will be easily understood by students and lay persons alike. Special care has been taken to address both current state of the art as well as future trends in seed technology. We believe this Third Edition represents a new level in presenting information that appeals to advanced undergraduate students as well as to those desiring more fundamental information on seed form and function. At the same time, it continues to have the strengths of the first two editions: its readability as well as its comprehensive coverage of the broader area of seed science and technology.

Seed Development and Germination Jaime Kigel, 2017-11-01 This text is intended for plant physiologists, molecular biologists, biochemists, biotechnologists, geneticists, horticulturalists, agronomists, and botanists and upper level undergraduate and graduate students in these disciplines. It integrates advances in the diverse and rapidly expanding field of seed science from ecological and demographic aspects of seed production, dispersal, and germination to the molecular biology of seed development. The book offers a broad multidisciplinary approach that covers both theoretical and applied knowledge.
