practice on groundwater The book provides guidance and examples of the application of multilevel piezometers on adapted monitoring strategies and the use for interpretation purposes of microbiological parameters pharmaceutical residues and related marker species The socio economic analysis in the case study cities sometimes uncovered distinctively different problem perceptions and priorities both in the groups of experts responsible for the water management and with the remaining stakeholders The AISUWRS project has developed tools to foster these urgently required deliberation processes Methodologies for formal sustainability assessment with a triple bottom line background were also elaborated and tested during the case studies The case studies have shown that the approach is valid and constitutes an important step towards integrated urban water management
