A Monastic Landscape Dr Breda Lynch, 2010-11-05 This publication is primarily a study of the various aspects of the use and situation of the land held by the Cistercian order in medieval Leinster A number of key topics form the central elements of this study These include an examination of the physical landscape into which the Cistercian order settled and the changes that occurred within that landscape during the later medieval era The book examines whether the location of the monasteries indicated any underlying nuances or if the monks were happy to settle wherever they were given land The involvement of the Cistercian order in the agricultural and economic life of Leinster is also examined A breakdown of the acreage and land type that the monasteries possessed is presented and in the final section the state of the monasteries immediately prior to the dissolution of the religious houses in the period 1536-41 is determined With regard to this final section the areas of interest are in relation to the physical remains of the monasteries the productivity or otherwise of the associated lands the organisation and location of that land and the general attitude of the Cistercian monks at that particular time in history There are many different areas of study that were examined These include the identification of the lands the land type and trends or differences in this type when compared with other parts of the country The organisation of the land and the uses of it in relation to the monastery are an essential aspect of the work and it is possible to identify economic and social change by discussing the uses of that land The identification of granges and grange buildings was not originally intended as part of this work however research has allowed some evidence to emerge in relation to these buildings and is included In relation to the approach a short chapter outlining the origins of monasticism and the emergence of the Cistercian Order is included A brief outline of the governing rules of the Cistercians is included in chapter one as is a short discussion on the spread of the order up to its arrival in Ireland The second chapter is merely intended to give an idea of the pattern of the distribution of the Cistercian monasteries in Ireland Most of the information is in table form giving the monastery its location date of foundation and founder From this a number of observations can be made The principal area of study is Leinster therefore chapter three deals with this territory discussing its boundaries both internal and external and the kingdoms that made up medieval Leinster The fact that the monasteries of Leinster were situated in very well defined territories means that although the study is of Leinster as a whole these smaller somewhat independent units were still an important element in both the landscape and the social framework of

the period As such it was necessary to ensure that each of these units was represented in any category of study The location of the monasteries is the focus of the second portion of chapter three Both the natural and man made features of the landscape are examined here The proximity of road and route ways to the monasteries has been mapped and discussed and any trends or patterns commented upon Chapter four deals with the monastic complex and the associated features It discusses the way in which the monastery and its lands were organised and the reasons for this This chapter deals more with the day to day requirements of the monks and indicates how both the land and the buildings within the complex were equally important and key elements in the functioning of the monasteries Following from chapter four and keeping earlier comments in mind the next portion of the work deals with other land that particular monasteries may have held at any time from foundation up to the time when the extents of the monastic possessions were drawn up Instead of looking Scottish Monastic Landscapes Derek Hall,2006 The major monastic orders had a significant influence upon the landscape of Scotland Recent research shows just how entrepreneurial they were and how they were responsible for the first real revolutions in agricultural and industrial matters Derek Hall examines the effects that their intensive sheep and cattle farming lead mining salt panning and coal mining have had on the modern landscape and suggests that the eighteenth and nineteenth century industrial revolution was based on the much earlier exploitation of these resources by the Scottish monasteries He also produces new evidence of the extent to which the monasteries were involved in the care for the sick This is an important companion volume to James Bond s award winning *Monastic Landscapes* which covers England and Wales *The Monastic Landscape of Late Antique Egypt* Darlene L. Brooks Hedstrom,2017-11-23 This book traces changing perceptions of Egypt s monastic landscape through an analysis of archaeological and documentary evidence from late antiquity *Recent Research on the Late Antique Countryside* William Bowden,Luke Lavan,Carlos Machado,2004 A complex picture of differing regional trajectories emerges whilst cultural change is everywhere apparent in phenomena such as Christianisation settlement nucleation and fortification BOOK JACKET Ecclesiastical Landscapes in Medieval Europe: An Archaeological Perspective José Carlos Sánchez-Pardo,Emmet Marron,Maria Crîngaci Țiplic,2020-07-02 By presenting case studies from across Eastern and Western Medieval Europe this volume aims to open up a Europe wide debate on the variety of relations and contexts between ecclesiastical buildings and their surrounding landscapes between the 5th and 15th centuries AD

Reconstructing Past Monastic Life: Volume 2: Diet, Landscape and Monastic Space Lluís Lloveras,Carme Rissech,Jordi Nadal,Philip Banks,2025-07-31 Explores the organization of diet food practices water management and spatial use within historical monastic complexes and landscapes Monasticism is a form of religious life in which participants renounce worldly activities to dedicate themselves primarily to spiritual matters living in small communities subject to a set of rules and isolated from the secular world Christian monasticism which originated at the end of the 3rd century in Egypt and North Africa spread to different parts of Europe in the 6th century However it was not until the Middle Ages that

monastic communities became one of the most powerful institutions in Europe. Monasteries and convents played a very important role not only as centers of spirituality but also as focal points of economic, technological and cultural activity. This multiplicity of activities carried out alongside their religious, social and political roles make monasteries spaces that can be studied from very different perspectives and that unfailingly provide essential information about our history. This second of two titles originates from an international conference that took place in Barcelona in January 2024 which sought to examine different aspects related to monastic life in the past and to promote and disseminate the results obtained in the latest studies undertaken within the framework of monastic complexes and their environments. These include contributions and multidisciplinary studies from archaeological, bioanthropological and/or documentary perspectives. Specialists from different disciplines present developments on the topic of monasticism from different fields of study such as zooarchaeology, bioanthropology, palaeopathology, archaeology, history, documentary disciplines, archives, cultural heritage etc. Volume 2 focuses on diet, food practices, water management and the organization and use of space within monastic complexes and landscapes. *The Cambridge History of Medieval Monasticism in the Latin West* Alison I. Beach, Isabelle

Cochelin, 2020-01-09. Monasticism in all of its variations was a feature of almost every landscape in the medieval West. So ubiquitous were religious women and men throughout the Middle Ages that all medievalists encounter monasticism in their intellectual worlds. While there is enormous interest in medieval monasticism among Anglophone scholars, language is often a barrier to accessing some of the most important and groundbreaking research emerging from Europe. *The Cambridge History of Medieval Monasticism in the Latin West* offers a comprehensive treatment of medieval monasticism from Late Antiquity to the end of the Middle Ages. The essays specially commissioned for this volume and written by an international team of scholars with contributors from Australia, Belgium, Canada, England, France, Germany, Italy, the Netherlands, Spain, Switzerland and the United States cover a range of topics and themes and represent the most up to date discoveries on this topic.

Restoration of Multifunctional Cultural Landscapes Stefan Zerbe, 2022-06-27. This book offers perspectives on how to develop a sustainable global balance of urbanization, land use intensification, land abandonment and multifunctional cultural landscapes. The focus is on the latter by describing the large variety of traditional cultural landscapes having evolved through centuries or even millennia by the use of the natural terrestrial and aquatic resources. Those cultural landscapes encompass pasture, agroforestry, terraced irrigation, coastal monastic and sacred landscapes as well as lake, river and saltscapes. The restoration of low input land use systems which often carry a high biodiversity on the species, ecosystem and landscape level as well as agrobiodiversity and agrobiodiversity is outlined. The restoration of multifunctional and diverse landscapes however is not only an ecological issue but encompasses many socio-economic aspects such as e.g. the revitalization of villages, eco-tourism, healthy food production, infrastructure and rural-urban partnerships. Global environmental problems which are related to urbanization and the intensification of the use of land and water resources are

comprehensively outlined Land abandonment which occurs on all continents is qualitatively and quantitatively assessed and the consequences for natural and cultural heritage loss is highlighted With the presentation of current rural development and landscape conservation strategies on the national as well as international level the topic reflects the high significance of environmental policy on the global scale The global implementation of natural and cultural heritage conservation is for example given by the UNESCO World Heritage Sites National Parks Biosphere Reserves Globally Important Agricultural Heritage Sites High Nature Value Farmland and the Satoyama initiative However also the every day landscapes can contribute to biodiversity and strong sustainability This comprehensive compendium based on about 4 000 references of scientific studies literature reviews project reports and environmental policy papers is thought for all students scholars and stakeholders from multifaceted disciplines interested in multifunctional cultural landscapes and how traditions and innovation on the landscape level can be merged for a sustainable future on our planet Case studies from all over the world are presented which can be used in Higher Education or to demonstrate the numerous approaches of sustainable rural development

Monastic Iceland Steinunn Kristjánsdóttir, 2022-12-30 This book provides an overview of medieval monasticism in Iceland from its dawn to its downfall during the Reformation Blending the evidence from material remains and written documents *Monastic Iceland* highlights the realities of everyday life in the male and female monasteries operated in Iceland The book describes the incorporation of monasticism into the Icelandic society the alleged land of the Vikings and thus how the monasteries coexisted with the natural and social environments on the island while keeping their general aims and objectives The book shows that large social systems such as monasticism can cross social and natural borders without necessitating fundamental changes apart from those triggered by the constant coexistence of nature and culture inside the environment they exist within The evidence provided debunks the myth that Icelandic monasteries male or female were isolated silent places or simple cells functioning principally as retirement homes for aristocrats To be a member of an ecclesiastical institution did not mean a quiet secluded life without any outside interaction but rather active participation in the surrounding community The book is for researchers in archaeology osteology and medieval history in addition to all those interested in monasticism and the medieval history of northern Europe

Monastic Ecological Wisdom Samuel Torvend, 2023-11-15 Can early medieval monasteries serve as a model of sustainable development and environmental conservation in today's world Inspired by Pope Francis's encyclical *Laudato Si* and Benedictine communities around the world whose shared monastic values inform ecological practice *Monastic Ecological Wisdom* uncovers the hidden story of early Christian and monastic care for the earth In *Monastic Ecological Wisdom* Samuel Torvend shows how it is possible that medieval monastic values and practices could assist in the careful conservation of what we claim is God's first gift God's first gesture of grace the earth and all that dwells with it By reflecting on an ecological reading of New Testament texts the Rule of St Benedict and early monastic engagement with the natural world as seen in the life of St Benedict such practices can

serve thoughtful Christians today who care deeply about living in harmony with the earth and all who call it home
