In the first part of the book topics like the wave particle duality the probabilistic nature of the measurement the possibility of multiple universes and the nature of reality are discussed In the second part Einstein's special and general theories of relativity and their amazing and mind boggling consequences are presented The impact of the theory of relativity on cosmology is immense The big bang model of the universe black holes and the current hot topics of dark matter and dark energy are explained and

discussed These fields that may hold the key to many unanswered questions about the universe are still evolving This book is intended for readers young and old who would like to understand the incomprehensible laws that govern the universe without any prior background in physics and mathematics Spacetime Physics Edwin F.
