Radiomics and Radiogenomics Ruijiang Li, Lei Xing, Sandy Napel, Daniel L. Rubin, 2019-07-09 Radiomics and Radiogenomics Technical Basis and Clinical Applications

provides a first summary of the overlapping fields of radiomics and radiogenomics showcasing how they are being used to evaluate disease characteristics and correlate with treatment response and patient prognosis It explains the fundamental principles technical bases and clinical applications with a focus on oncology The book s expert authors present computational approaches for extracting imaging features that help to detect and characterize disease tissues for improving diagnosis prognosis and evaluation of therapy response This book is intended for audiences including imaging scientists medical physicists as well as medical professionals and specialists such as diagnostic radiologists radiation oncologists and medical oncologists Features Provides a first complete overview of the technical underpinnings and clinical applications of radiomics and radiogenomics Shows how they are improving diagnostic and prognostic decisions with greater efficacy Discusses the image informatics quantitative imaging feature extraction predictive modeling software tools and other key areas Covers applications in oncology and beyond covering all major disease sites in separate chapters Includes an introduction to basic principles and discussion of emerging research directions with a roadmap to clinical translation

Handbook of Texture Analysis Ayman El-Baz, Mohammad Ghazal, Jasjit S. Suri, 2024-06-24 The major goals of texture research in computer vision are to understand model and process texture and ultimately to simulate the human visual learning process using computer technologies In the last decade artificial intelligence has been revolutionized by machine learning and big data approaches outperforming human prediction on a wide range of problems In particular deep learning convolutional neural networks CNNs are particularly well suited to texture analysis This book examines four major application domains related to texture analysis and their relationship to AI based industrial applications texture classification texture segmentation shape from texture and texture synthesis This volume Discusses texture based segmentation for extracting image shape features modeling and segmentation of noisy and textured images spatially constrained color texture model for image segmentation and texture segmentation using Gabor filters Examines textural features for image classification a statistical approach for classification texture classification from random features and applications of texture classifications Describes shape from texture including general principles 3D shapes and equations for recovering shape from texture Surveys texture modeling including extraction based on Hough transformation and cycle detection image quilting gray level run lengths and use of Markov random fields Aimed at researchers academics and advanced students in biomedical engineering image analysis cognitive science and computer science and engineering this is an essential reference for those looking to advance their understanding in this applied and emergent field

MRI of the Body Daniel

Vanel, Michael T. McNamara, 2012-12-06 As with the introduction of x ray computed tomography much of the initial development of magnetic resonance applications tended to focus on the central nervous system The development of magnetic resonance imaging applications to other organ systems such as the chest abdomen pelvis and extremities has lagged somewhat behind awaiting technical improvements and a broader user base The past two years have seen a marked increase in imaging applications throughout the body most notably the musculoskeletal system It is in this regard that MRI of the Body is a welcome arrival as a text which describes both basic principles of magnetic resonance imaging and surveys the current status of magnetic resonance imaging applications throughout the body The volume is concise focused clinically oriented and abundantly illustrated In each organ system the appropriate technical approach is discussed the normal anatomic features are reviewed and the range of pathologic appearances which may be encountered are described The authors of the chapters provide a balanced overview of MR applications and describe both present limitations and future potential of magnetic resonance imaging applications in the organ system described *Medical Image Computing and Computer-Assisted Intervention - MICCAI 2015* Nassir Navab, Joachim Hornegger, William M. Wells, Alejandro Frangi, 2015-09-28 The three volume set LNCS 9349 9350 and 9351 constitutes the refereed proceedings of the 18th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2015 held in Munich Germany in October 2015 Based on rigorous peer reviews the program committee carefully selected 263 revised papers from 810 submissions for presentation in three volumes The papers have been organized in the following topical sections quantitative image analysis I segmentation and measurement computer aided diagnosis machine learning computer aided diagnosis automation quantitative image analysis II classification detection features and morphology advanced MRI diffusion fMRI DCE quantitative image analysis III motion deformation development and degeneration quantitative image analysis IV microscopy fluorescence and histological imagery registration method and advanced applications reconstruction image formation advanced acquisition computational imaging modelling and simulation for diagnosis and interventional planning computer assisted and image guided interventions *Spectral Imaging* Hatem Alkadhi, André Euler, David Maintz, Dushyant Sahani, 2022-05-02 This book edited by leading experts in radiology offers a state of the art overview of the specifics and the added value of dual energy multi energy and spectral computed tomography CT Latest advances and upcoming innovations such as photon counting detector CT are covered by renowned experts in the field The entire spectrum of clinical applications of dual energy and spectral CT throughout the body is covered Book chapters are written by expert authors with a background in physics and radiology and are richly illustrated with high quality figures graphical illustrations and tables The first section covers background issues and the most relevant technical aspects of the technique including a detailed description of the approaches to dual energy spectral and photon counting CT by different vendors of CT scanners The second part focusses on the use of dual energy spectral and photon counting CT in daily clinical practice and individual

chapters are devoted to imaging of the brain cardiovascular system gastrointestinal tract abdominal organs skeletal system and the chest The focus of the book ensures that it will be of interest for a multidisciplinary forum of readers comprising radiologists medical physicists and other medical professionals and scientists being interested in cutting edge CT imaging

Liver Diseases Florentina Radu-Ionita,Nikolaos T. Pyrsopoulos,Mariana Jinga,Ion C. Tintoiu,Zhonghua Sun,Ecaterina Bontas,2020-01-10 This book provides an in depth coverage not only of liver pathology but also of diagnosis of the numerous types of liver disease placing specific emphasis on current treatments of liver pathology including the most up to date information on liver transplantation The first part of provides an in depth account of the liver pathology in different conditions such as Hepatitis liver ischaemia reperfusion injury Lyme disease cirrhotic cardiomyopathy and hepatocellular carcinoma The second part provides a comprehensive overview of diagnostic methods Of particular interest are chapters on the latest techniques in Patient specific 3D printing and transient elastography FibroScan The final part focuses on treatment and provides a step by step guide to the therapeutic management of liver diseases starting with pharmacological treatment and techniques including surgery and liver transplantation This is an invaluable book for clinicians practitioners including academics scientists researchers and postgraduates to provide the newest knowledge in the field of liver pathogenesis It is written by a multidisciplinary team of experts in hepatology gastroenterology and surgery especially from liver transplantation
