Changing Assessment Conrad Hughes, 2025-03-24 Since the Delors report education reformers have been working to create curricula that allow human beings to flourish Schools should not only be places where we learn to be and learn to live together but also places where the way we assess students valorises the diverse range of human gifts within them Yet most schools remain locked in a 19th century assessment structure that prevents young people from exploring the full variety and extent of their talents forcing them to perform on a narrow high stakes track When will this change In this remarkable book Conrad Hughes gives an overview of the assessment problem affecting schools and creates a path to take to broaden assessment and potentially reposition the whole purpose of schooling It is a brave beautifully written treatise that anyone interested in education and assessment should read Georges Haddad Honorary President of Panth on Sorbonne University Former Director at UNESCO Education Sector

Environmental Policy Science's Exploration for Innovative Data Nicholas Guehlstorf, 2025-08-04 This edited volume

discusses the use of nontraditional data sources in environmental political research and its implications for policymaking. Researchers involved in natural resource investigations and pollution control analysis must be entrepreneurial in finding and utilizing data sets to answer pressing policy questions. To remain relevant, successful researchers must increasingly seek data beyond routine federal program assessments, fragmented local surveys, and limited stakeholder interactions. This volume surveys current environmental research that draws on emerging data sources such as social media and political discourse. It poses critical questions about the potential of creative and innovative analytical approaches, particularly in contexts where policymakers have disregarded objective evidence-based social science on environmental challenges. By encouraging scholars to adopt new methods, research designs, and data sources, this book offers valuable insights for researchers across the social and environmental sciences.

Leadership and Supervision Ami Rokach, 2021-12-26 This volume is dedicated to examining various points of view of what leadership is and how the leader supervises those whom he trains. It is divided into three conceptual sections: *The Leader*, which examines various dimensions of leadership and what it means to lead; *The Leader's Effect on Others*, which, as the title indicates, looks at the effect and influence that a leader may have on others; and *Organizational Culture*, the effect of the leader on the culture of the organization or institution. The chapters in this book were originally published in *The Journal of Psychology*.

Distributional Choices in EU Climate Change Law and Policy Javier De Cendra de Larragán, 2011-01-01 Climate change policy inevitably has two core components: the goals and the means chosen to pursue those goals. Decisions on goals and means necessarily have distributional consequences. Any policy choice generates winners and losers. While this outcome cannot be avoided, even doing nothing leads to distributional consequences. Policymakers can, through the choice, design, and implementation of policies, shape to some extent the distribution of the burdens of mitigation and adaptation to climate change. In greater depth than any previous legal study in the field, this book deals with the way in which the European Union (EU) has dealt with climate change and with the distribution of the benefits and costs of climate change mitigation policies among affected parties. With extraordinary thoroughness, the author assesses the legality of choices made, particularly concerning mitigation targets and timelines, and examines the role that legal principles can play in the adoption, interpretation, and judicial testing of distributional choices. His analysis of the tension between such choices and EU law is bolstered by an exploration of emerging legal principles which could provide additional guidance in this challenging and controversial area. Among the core issues dealt with are the following: relationship among mitigation, adaptation, and sustainable development regulations as means to make distributional choices; distributional choices between generations and the principle of intergenerational justice; distributional choices concerning firms and individuals; the participation of affected parties in distributional choices; access to justice in EU courts to challenge violations of procedural environmental rights; the role of legal principles in making, evaluating, and testing distributional choices; the principle of proportionality with its tests of

appropriateness and necessity the principle of equality the precautionary principle the principle of prevention the polluter pays principle A concluding chapter offers deeply informed recommendations regarding the design of EU climate change law including a preliminary assessment of EU wide personal carbon trading In its insightful illumination of how the inevitable trade offs weaknesses inconsistencies and ambiguities in the way law deals with distributional choices renders them vulnerable to external pressures this book will be of enormous value to regulators and policymakers concerned with effective efficient and fair climate change measures As a critical assessment of existing EU climate change laws and policies and as a systematic analysis of the problem of burden sharing this book will also prove highly valuable to academics in environmental fields of study
