Notes from the Metalevel Heinrich Taube, 2013-10-23 First Published in 2005 Routledge is an imprint of Taylor Francis an informa company

Introduction to Computer Music Nick Collins, 2010-02-01 An up to date core undergraduate text Introduction to Computer Music deals with both the practical use of technology in music and the key principles underpinning the discipline It targets both musicians exploring computers and technologists engaging with music and does so in the confidence that both groups can learn tremendously from the cross disciplinary encounter It is designed to approach computer music as its own subject and strongly bridge the arts to computing divide benefiting and reconciling both musicians and computer scientists You will need little or no prior experience of computer programming itself and may not have an extensive background in mathematics or music but this highly engaging textbook will help you master many disciplines at once with a focus on both fascinating theories and exciting practical applications

An Open Design for Computer-Aided Algorithmic Music Composition Christopher Ariza, 2005 This dissertation introduces a new design for a computer aided algorithmic music composition system Rather than exploring specific algorithms this study focuses on system and component design The design introduced here is demonstrated through its implementation in athenaCL a modular polyphonic poly paradigm algorithmic music composition system in a cross platform interactive command line environment The athenaCL system offers an open source object oriented composition tool written in Python The system can be scripted and embedded and includes integrated instrument libraries post tonal and microtonal pitch modeling tools multiple format graphical outputs and musical output in Csound MIDI audio file XML and text formats Software design analysis is framed within a broad historical and intertextual study of the themes approaches and systems of computer aided algorithmic composition CAAC A detailed history of the earliest experiments as well as analysis of the foundational CAAC systems is provided Common problems and interpretations of CAAC are then presented in a historical and intertextual context drawn from the writings and systems of numerous composers and developers Toward the goal of developing techniques of comparative software analysis a survey of system design archetypes based on seven descriptors of CAAC systems is presented With this foundation athenaCL system components are analyzed in detail System components are divided into abstractions of musical materials abstractions of musical procedures and system architecture For each component object models Python examples and diagrams are provided Further each component is given context in terms of its compositional implications and relation to alternative and related models from the history of CAAC

Algorithmic Composition Gerhard Nierhaus, 2009-08-28 Algorithmic composition composing by means of formalizable methods has a century old tradition not only in occidental music history This is the first book to provide a detailed overview of prominent procedures of algorithmic composition in a pragmatic way rather than by treating formalizable aspects in single works In addition to an historic overview each chapter presents a specific class of algorithm in a compositional context by providing a general introduction to

its development and theoretical basis and describes different musical applications Each chapter outlines the strengths weaknesses and possible aesthetical implications resulting from the application of the treated approaches Topics covered are markov models generative grammars transition networks chaos and self similarity genetic algorithms cellular automata neural networks and artificial intelligence are covered The comprehensive bibliography makes this work ideal for the musician and the researcher alike

Playful Disruption of Digital Media Daniel Cermak-Sassenrath, 2018-04-07 This book starts with the proposition that digital media invite play and indeed need to be played by their everyday users Play is probably one of the most visible and powerful ways to appropriate the digital world The diverse emerging practices of digital media appear to be essentially playful Users are involved and active produce form and content spread exchange and consume it take risks are conscious of their own goals and the possibilities of achieving them are skilled and know how to acquire more skills They share a perspective of can do a curiosity of what happens next Play can be observed in social economic political artistic educational and criminal contexts and endeavours It is employed as a counter strategy for tacit or open resistance as a method and productive practice and something people do for fun The book aims to define a particular contemporary attitude a playful approach to media It identifies some common ground and key

principles in this novel terrain Instead of looking at play and how it branches into different disciplines like business and education the phenomenon of play in digital media is approached unconstrained by disciplinary boundaries The contributions in this book provide a glimpse of a playful technological revolution that is a joyful celebration of possibilities that new media afford This book is not a practical guide on how to hack a system or to pirate music but provides critical insights into the unintended artistic fun subversive and sometimes dodgy applications of digital media Contributions from Chris Crawford Mathias Fuchs Rilla Khaled Sybille Lammes Eva and Franco Mattes Florian Floyd Mueller Michael Nitsche Julian Oliver and others cover and address topics such as reflective game design identity and people s engagement in online media conflicts and challenging opportunities for play playing with cartographical interfaces player emergent production practices the re purposing of data game creation as an educational approach the ludification of society the creation of meaning within and without play the internalisation and subversion of roles through play and the boundaries of play
