Ivory, Melody Y., Rashmi R. Sinha, and Marti A. Hearst. "Empirically Validated Web Page Design Metrics." Proceedings of the Sigchi Conference on Human Factors in Computing Systems. New York: ACM Press, 2001. 53-60.

"A quantitative analysis of a large collection of expert-rated web sites reveals that page-level metrics can accurately predict if a site will be highly rated. The analysis also provides empirical evidence that important metrics, including page composition, page formatting, and overall page characteristics, differ among web site categories such as education, community, living, and finance. These results provide an empirical foundation for web site design guidelines and also suggest which metrics can be most important for evaluation via user studies."

"The use of server-side includes (SSI) simplifies Web site maintenance by generating Web pages on-the-fly, rather than creating static HTML pages. This article provides examples and instructions for common uses of SSIs, including displaying environmental variables, inserting file information, and using the advanced capabilities of extended SSI (XSSI). Potential concerns including security, WYSIWYG (what-you-see-is-what-you-get) editors, filename extensions, and server load are discussed, as are the advantages and disadvantages of SSI over more well-known tools like CGL JavaScript, or Active Server Pages (ASP)."

"Through a study of web site design practice, we observed that designers employ multiple representations of web sites as they progress through the design process, and that these representations allow them to focus on different aspects of the design. Designers also employ multiple tools during the course of a project, including graphic design, web development, presentation, and word processing software, as well as pen and paper. Sketching on paper is especially important during the design exploration phase of a project, when designers wish to explore many design possibilities quickly without focusing on low-level details. Web site design tools intended to support the early phases of the design process should employ informal interaction techniques, should support multiple site representations, and should integrate well with other applications that designers use regularly."
