Nuclear Engineering Education National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Nuclear Engineering Education, 1990-02-01 Given current downward trends in graduate and undergraduate enrollment in the nuclear engineering curriculum there is a fundamental concern that there will not be enough nuclear engineering graduates available to meet future needs This book characterizes the status of nuclear engineering education in the United States estimates the supply and demand for nuclear engineers both graduate and undergraduate over the next 5 to 20 years addresses the range of material that the nuclear engineering curriculum should cover and how it should relate to allied disciplines and recommends actions to help ensure that the nation's needs for competent graduate and undergraduate nuclear engineers can be met **Nuclear Power Engineering Education**

Program, University of Illinois, 1993 The DOE CECo Nuclear Power Engineering Education Program at the University of Illinois in its first year has significantly impacted the quality of the power education which our students receive It has contributed to the recently completed upgrade of the console of our Advanced TRIGA reactor which increases the reactor's utility for training the procurement of new equipment to upgrade and refurbish several of the undergraduate laboratory set ups and the procurement of computational workstations in support of the instructional computing laboratory In addition smaller amounts of funds were used for the recruitment and retention of top quality graduate students the support of faculty to visit other institutions to attract top students into the discipline and to provide funds for faculty to participate in short courses to improve their skills and background in the power area These items and activities have helped elevate in the student's perspective the role of nuclear power in the discipline We feel this is having a favorable impact on student career
