**Intermediate-Energy Nuclear Physics** A.S. Iljinov, 2018-01-18 Intermediate Energy Nuclear Physics is devoted to discussing the interaction between hadrons with nuclei which leads to the emission of particles during an intranuclear cascade and subsequent decay of a highly excited residual nucleus Experimental data and the methods and results of the calculation of probabilities of various processes initiated by intermediate energy hadrons in nuclei are set forth and discussed The potential for obtaining information on the structure and properties of nuclei by comparing experimental data with theoretical results is analyzed New issues such as analytic

methods for the solution of kinetic equations describing the cascade nuclear absorption of hadrons from bound states of hadronic atoms interaction of antinucleons with nuclei multifragmentation of highly excited residual nuclei and polarization phenomena are discussed in detail The book also demonstrates hadron nucleus interactions that bridge the gap between low energy and heavy ions physics It is an interesting reference for nuclear physicists and other researchers interested in the analysis of problems associated with the evolution of the early hot universe neutron stars and supernovas after burning of radioactive waste in nuclear energy installations and electronuclear energy breeding

One of the main goals of intermediate energy nuclear physics which serves an important role as a bridge between nuclear and particle physics is to construct the theory of strong interaction phenomena in terms of conventional degrees of freedom nucleons deltas and mesons as well as of quark degrees of freedom The main topics to be discussed at this conference are the interaction of pions and other mesons with nuclei at intermediate energies and the role of mesonic degrees of freedom in nuclear reactions including photon hadron and heavy ion induced reactions Both theoretical and experimental results will be included Over the past two decades the Meson Factories including LAMPF TRIUMF and PSI have provided us with systematic experimental information on hadron hadron and hadron nucleus dynamics Major accelerators of JINR are also suitable for studying problems in Intermediate Energy Nuclear Physics At the present time first experiments have been performed with the proton beams at the Moscow Meson Factory of INR One of the purposes of this conference is to introduce the intermediate energy physics

community to the possibility of utilizing the facilities of JINR and INR during the next decade
