**The Evolution of Technology** George Basalla, 1989-02-24 This book presents an evolutionary theory of technological change based upon recent scholarship in the history of technology and upon relevant material drawn from economic history and anthropology. It challenges the popular notion that technology advances by the efforts of a few heroic individuals who produce a series of revolutionary inventions owing little or nothing to the technological past. Therefore the book's argument is shaped by analogies taken selectively from the theory of organic evolution and not from the theory and practice of political revolution. Three themes appear and reappear with variations throughout the study. The first is diversity, an acknowledgment of the vast numbers of different kinds of made things, artifacts that have long been available to humanity. The second is necessity, the belief that humans are driven to invent new artifacts in order to meet basic biological requirements such as food, shelter, and defense, and the third is technological evolution, an organic analogy that explains both the emergence of novel artifacts and their subsequent selection by society for incorporation into its material life without invoking either biological necessity or technological progress. Although the book is not intended to provide a strict chronological account of the development of technology, historical examples including many of the major achievements of Western technology—the waterwheel, the printing press, the steam engine, automobiles, and trucks, and the transistor—are used extensively to support its theoretical framework. *The Evolution of Technology* will be of interest to all readers seeking to learn how and why technology changes, including both students and specialists in the history of technology and science.

Part 2 covers diplomatic, political aspects of the war against Japan. Part 3 contains sources on the economic and legal aspects of the war against Japan. Part 4 presents sources on the military aspects of the war embracing land, air, and sea forces. **Fortress California, 1910-1961** Roger W. Lotchin, 2002 *Fortress California* now in paperback for the first time links the growth of the U.S. military industrial complex to civic leaders who competed for military bases and military contracts to ensure economic growth. Analyzing the growth of Los Angeles, San Diego, and San Francisco from 1910 to 1961, Roger W. Lotchin discredits the assumption that the industrialization of the Sunbelt was a result of a partnership between industry and the military. He provides instead a detailed and forceful argument that municipalities used federal resources to build urban empires and metropolitan military complexes. These have increased the flow of federal dollars into the state, thereby shifting the focus of the military industrial complex from warfare to welfare.

**Eldorado** Robert Bothwell, 2011-11-01 Robert Bothwell, one of Canada's foremost historians, has

told the Eldorado story with colour and drama He has captured the excitement of frontier resource development in the 1930s and the intrigue of international politics in the 1940s and 1950s      *Film and the Nuclear Age* Toni A. Perrine,2019-01-22

Just as we generally pay scant attention to the potential dangers of nuclear power and nuclear war until quite recently scholars have made limited critical attempts to understand the cultural manifestations of the nuclear status quo Films that feature nuclear issues most often simplify and trivialize the subject They also convey a sense of the ambivalence and anxiety that pervades cultural responses to our nuclear capability The production of popular narrative films with nuclear topics largely conforms to periods of heightened nuclear awareness or fear such as the fear of fallout from nuclear testing manifested in the atomic creatures in science fiction movies of the late 1950s By their very numbers and through a set of recurring stylistic and narrative conventions nuclear films reflect a deep seated cultural anxiety This study includes detailed textual analysis of films that depict nuclear issues including the development and use of the first atomic bombs nuclear testing and the fear of fallout nuclear power the Cold War arms race loose nukes and future nuclear war and its aftermath Includes bibliographic references index filmography choronology Illustrated      **Nuclear Non-proliferation** Robert L. Beckman,2019-03-08 This book examines the Nuclear Non Proliferation Act of 1978 and other stringent non proliferation laws that seek to tighten U S nuclear export criteria and strengthen the international non proliferation regime It juxtaposes efforts of nuclear managers with those of reformers who remain intent on strengthening safeguards to prevent horizontal proliferation Dr Beckman looks at the development of the Atoms for Peace program the mindset that grew up along with it and the shifts in congressional thought about the promise and problems of the peaceful nuclear fuel cycle      **Secret Agents** Marjorie Garber,Rebecca Walkowitz,2013-10-18 When the American Bar Association recreated the trial of Ethel and Julius Rosenberg on the fortieth anniversary of their execution the jury acquitted the mock Rosenbergs finding that in today s courts they would not have been convicted of espionage The 1950s trial of the Rosenbergs on charges of Atomic Spying and stealing the secrets of the Atomic bomb was a major event of Cold War America galvanizing public opinion on all sides of the question Secret Agents presents essays by lawyers cultural critics social historians and historians of science as well as a reconsideration of the Rosenbergs by their younger son Robert Meeropol Secret Agents gives new resonance to a history we have for too long been willing to forget      [It's All for Sale](#) James Ridgeway,2004 An analysis of who owns and controls the world s natural resources geared for the general reader but useful for scholars of development international relations and the environment      **Researching Food Habits** Helen M.
