Electronics in Experimental Physics D. V. Skobel'tsyn, 2013-11-09 [Nuclear Electronics](#) Emil Kowalski, 2013-03-08
Electronics is the most important tool in nuclear radiation metrology Without electronic instruments most of the problems concerned with measurement in pure or applied nuclear research radiation protection or the use of radioactive isotopes in industrial process control would remain unsolved Conversely the radiation metrology was one of the first areas if not the first outside communications in which electronic devices were successfully employed The quantum nature of nuclear radiations determined the need to work with pulse type signals and thus contributed substantially to the establishment of nuclear electronics [AKASHVANI](#) All India Radio (AIR), New Delhi, 1966-05-08 Akashvani English is a programme journal of ALL INDIA RADIO it was formerly known as The Indian Listener It used to serve the listener as a Bradshaw of broadcasting and give listener the useful information in an interesting manner about programmes who writes them take part in them and produce them along with photographs of performing artists It also contains the information of major changes in the policy and service of the organisation The Indian Listener fortnightly programme journal of AIR in English published by The Indian State Broadcasting Service Bombay started on 22 December 1935 and was the successor to the Indian Radio Times in English which was published beginning in July 16 of 1927 From 22 August 1937 onwards it used to be published by All India Radio New Delhi From 1950 it was turned into a weekly journal Later The Indian listener became Akashvani English on 5 January 1958 It was

Energy Research Abstracts, 1987 **Index to Conferences Relating to Nuclear Science** Willie E. Clark, Carol B. Patterson, Margaret L. Pflueger, 1966 **Radiation Detection** Douglas McGregor, J. Kenneth Shultis, 2020-08-19 Radiation Detection Concepts Methods and Devices provides a modern overview of radiation detection devices and radiation measurement methods The book topics have been selected on the basis of the authors many years of experience designing radiation detectors and teaching radiation detection and measurement in a classroom environment This book is designed to give the reader more than a glimpse at radiation detection devices and a few packaged equations Rather it seeks to provide an understanding that allows the reader to choose the appropriate detection technology for a particular application to design detectors and to

competently perform radiation measurements The authors describe assumptions used to derive frequently encountered equations used in radiation detection and measurement thereby providing insight when and when not to apply the many approaches used in different aspects of radiation detection Detailed in many of the chapters are specific aspects of radiation detectors including comprehensive reviews of the historical development and current state of each topic Such a review necessarily entails citations to many of the important discoveries providing a resource to find quickly additional and more detailed information This book generally has five main themes Physics and Electrostatics needed to Design Radiation Detectors Properties and Design of Common Radiation Detectors Description and Modeling of the Different Types of Radiation Detectors Radiation Measurements and Subsequent Analysis Introductory Electronics Used for Radiation Detectors Topics covered include atomic and nuclear physics radiation interactions sources of radiation and background radiation Detector operation is addressed with chapters on radiation counting statistics radiation source and detector effects electrostatics for signal generation solid state and semiconductor physics background radiations and radiation counting and spectroscopy Detectors for gamma rays charged particles and neutrons are detailed in chapters on gas filled scintillator semiconductor thermoluminescence and optically stimulated luminescence photographic film and a variety of other detection devices
