Nuclear Models And The Search For Unity In Nuclear Physics:

Nuclear Models and the Search for Unity in Nuclear Physics Krishna Kumar, 1984 Based on a popular series of lectures given by the author at the University of Bergen Norway in 1979 80 this book provides a concise survey of the historical background to the search for unity in nuclear physics and describes in some depth the relevant concepts and mathematical techniques Technical details are kept to a minimum making this volume accessible to nonspecialists as well as to students and researchers in mathematics and physics

High Spin Physics And Gamma-soft Nuclei - Proceedings Of The International Conference Juerg X Saladin, Raymond A Sorensen, C Martin Vincent, 1991-03-06 The proceedings present the most recent results of experimental and theoretical nuclear spectroscopy revealing the effects of rapid rotation and thermal fluctuations on the shapes and superfluid properties of a wide range of atomic nuclei Unstable and novel shapes are emphasized e g super and hyper deformed shapes and triaxial quadrupole and octupole shapes both static and vibrational Theoretical treatments are given in terms of a variety of mean field models as well as the Fermion Dynamical Symmetry Model and the Interacting Boson Model New experimental methods of gamma ray spectroscopy are discussed including fluctuation analysis and energy ordered gamma ray spectroscopy

String Theory Research Progress Ferenc N. Balogh, 2008 String theory is a model of fundamental physics whose building blocks are one dimensional extended objects called strings rather than the zero dimensional point particles that form the basis for the standard model of particle physics The phrase is often used as shorthand for Superstring theory as well as related theories such as M theory By replacing the point like particles with strings an apparently consistent quantum theory of gravity emerges Moreover it may be possible to unify the known natural forces gravitational electromagnetic weak nuclear and strong nuclear by describing them with the same set of equations Studies of string theory have revealed that it

predicts higher dimensional objects called branes String theory strongly suggests the existence of ten or eleven in M theory space time dimensions as opposed to the usual four three spatial and one temporal used in relativity theory TID. ,19??
