Objections to Nuclear Defence Nigel Blake, Kay Pole, 2020-11-19 Moral and political questions are vitally relevant to the issue of survival in the nuclear age Ethics has much to teach us about the meaning of national defence and civic responsibility in the nuclear state For instance those in NATO who argue for increased spending on such weapons do so with the intention of defending the values of the West They must therefore be absolutely sure that they are not as the contributors to this volume originally published in 1984 powerfully suggest undermining or destroying those values by the very means they adopt to preserve them With the continued success of nuclear deterrence itself in question responsible citizens feel an urgent need to assess the clash between personal doubts cherished principles and their governments loudly voiced moral certainties In *Objections to Nuclear Defence* professional philosophers of widely varying persuasions provide new analyses of these problems They spell out clearly and vividly the moral and political objections objections to the concrete nuclear policies of the Western governments today Often impassioned but always rational the book will be of special interest to students of international affairs peace studies and applied philosophy as well as to the general reader who is trying to choose between political parties in Europe or North America

The Case for U.S. Nuclear Weapons in the 21st Century Brad Roberts, 2023-05-25 An excellent contribution to the debate on the future role of nuclear weapons and nuclear deterrence in American foreign policy Contemporary Security Policy This book is a counter to the conventional wisdom that the United States can and should do more to reduce both the role of nuclear weapons in its security strategies and the number of weapons in its arsenal The case against nuclear weapons has been made on many grounds including historical political and moral But Brad Roberts argues it has not so far been informed by the experience of the United States since the Cold War in trying to adapt deterrence to a changed world and to create the conditions that would allow further significant changes to U S nuclear policy and posture Drawing on the author s experience in the making and implementation of U S policy in the Obama administration this book examines that real world experience and finds important lessons for the disarmament enterprise Central conclusions of the work are that other nuclear armed states are not prepared to join the United States in making reductions and that unilateral

steps by the United States to disarm further would be harmful to its interests and those of its allies. The book ultimately argues in favor of patience and persistence in the implementation of a balanced approach to nuclear strategy that encompasses political efforts to reduce nuclear dangers along with military efforts to deter them. Well researched and carefully argued. *Foreign Affairs* *British Nuclear Mobilisation Since 1945* Jonathan Hogg, Kate Brown, 2021-05-18. This book explores aspects of the social and cultural history of nuclear Britain in the Cold War era 1945-1991 and contributes to a more multivalent exploration of the consequences of nuclear choices which are too often left unacknowledged by historians of post-war Britain. In the years after 1945 the British government mobilised money, scientific knowledge, people and military industrial capacity to create both an independent nuclear deterrent and the generation of electricity through nuclear reactors. This expensive and vast technopolitical project, mostly top secret and run by small sub-committees within government, was central to broader Cold War strategy and policy. Recent attempts to map the resulting social and cultural history of these military industrial policy decisions suggest that nuclear mobilisation had far-reaching consequences for British life. The chapters in this book were originally published as a special issue of *Contemporary British History*.

Australia and Nuclear War Michael Denborough, 2020-11-19. I pray that words spoken at this conference may carry beyond walls and reach thousands of ears hitherto deaf to warnings of the final catastrophe. So said Patrick White in June 1983 at an important symposium organised by the Australian National University to examine the whole issue of nuclear war and its implications for Australia. Many prominent Australians including H. C. Coombs, Senator Susan Ryan, leading academics and medics attended the conference along with distinguished experts from overseas and mingled and talked with many representatives of Australian peace movements. In two intense and emotional days they discussed many different aspects of the crisis that threatens the world from the latest scientific thinking on possible effects on the atmosphere to the increasingly important role of the women's peace movement and the efforts of ordinary people around the world to stop the nuclear arms race. Originally published in 1983, this book presents the upshot of these deliberations including unforgettable illustrations of some of the consequences of nuclear war. The book does not pretend to provide the answers nor does it take any political viewpoint. It does present the authoritative opinions of some of the world's leading minds on the extent of the threat that faces Australia alongside powerful statements from committed men and women from around the world, opinions that will inform and disturb all thinking Australians. *Pakistan's Nuclear Policy* Zafar Khan, 2014-07-17. In May 1998, in reaction to India's nuclear weapons tests, Pakistan tested six nuclear weapons. Following this, the country opted for a policy of minimum deterrence and within a year Pakistan had altered its policy stance by adding the modifier of minimum credible deterrence. This book looks at how this seemingly innocuous shift seriously impacted on Pakistan's nuclear policy direction and whether the concept of minimum has lost its significance in the South Asian region's changed strategic environment. After providing a brief historical background exploring why and how Pakistan carried out the nuclear development program, the

book questions why Pakistan could not sustain the minimum deterrence that it had conceptualized in the immediate aftermath of the 1998 test It examines the conceptual theoretical framework of the essentials of minimum deterrence in order to question whether Pakistan s nuclear policy remained consistent with this as well as to discover the rudimentary factors that are responsible for the inconsistencies with regard to minimum deterrence conceived in this study The book goes on to look at the policy options that Pakistan had after acquiring the nuclear capability and what the rationale was for selecting minimum deterrence The book not only highlights Pakistan deterrent force building but also analyzes closely Pakistan s doctrinal posture of first use option Furthermore it examines the policy towards arms control and disarmament and discusses whether these individual policy orientations are consistent with the minimum deterrence Conceptually providing a deeper understanding of Pakistan s post 1998 nuclear policy this book critically examines whether the minimum deterrence conceived could be sustained both at the theoretical and operational levels It will be a useful contribution in the field of Nuclear Policy Security Studies Asian Politics Proliferation Non Proliferation Studies and Peace Studies This book will be of interest to policy makers scholars and students of nuclear policy nuclear proliferation and arms control related research

weapons radar and radar sites involved Included are two personal accounts of the first interception of a Soviet Bear bomber off the coast of Canada and the first Canadian fighter interceptor pilot to win the coveted United States Air Force Top Gun award

Global Nuclear Disarmament V R Raghavan,2012-08-01 The DPG was chosen as a research institution to assist in the deliberations of the International Commission on Nuclear Non Proliferation and Disarmament constituted by the Australian and Japanese governments The support of the NTI to DPG s efforts has been immense and definitive The first decade of 21st century has seen a resurgence of support for global nuclear disarmament A cascade of nuclear disarmament proposal has emerged from different sources India has consistently favored complete global nuclear disarmament even as it laid the foundations of a nuclear energy programme Notwithstanding the nuclear tests Indian policy on global nuclear disarmament has not been disavowed Global nuclear disarmament is closely linked to geo political conditions Unless such conditions are favourable states are unlikely to take initiatives to either reduce or eliminate their nuclear weapons stockpiles This book examines the geopolitical necessities which will encourage nuclear disarmament globally It also contrasts them with the geopolitical realities currently prevailing which impact on nuclear disarmament The papers in the book bring forth both the challenges and opportunities that lie ahead

Curbing the Spread of Nuclear Weapons Ian Bellany,2013-07-19 Provides a fully detailed but accessible and accurate introduction to the technical aspects of nuclear energy and nuclear weapons Demonstrates that international security is unlikely to benefit from encouraging the spread of nuclear weapons Includes a full discussion of the phenomenon of nuclear free zones with particular emphasis on the zone covering Latin America Frankly appraises the International Atomic Energy Agency s safeguards system

Stable Nuclear Zero Sverre Lodgaard,2016-08-12 This volume examines the conditions necessary for a stable nuclear weapons free world and the implications for nuclear disarmament policy The Nuclear Non Proliferation Treaty NPT is a road map to nuclear zero but it is a rudimentary one and it says nothing about the kind of zero to aim for Preferably this would be a world where the inhibitions against reversal are strong enough to make it stably non nuclear What then are the requirements of stable zero The literature on nuclear disarmament has paid little attention to this question By and large the focus has been on the next steps and discussions tend to stop where the NPT stops with the elimination of the weapons This book seeks to fill a lacuna by examining the requirements of stable zero and their implications for the road map to that goal starting from the vision to the present day The volume highlights that a clear conception of the goal not only is important in itself but can shed light on what kind of disarmament process to promote This book will be of much interest to students of nuclear proliferation global governance security studies and IR
