## Nuclei far from stability in nucleon-removal/fragmentation reactions

Fragmentation is an optimum reaction mechanism for exploring the nuclide chart:

- neutron-deficient nuclei are highly populated up to the drip-line
- the in-flight fragmentation of heavy nuclei leading to fission produces medium-mass neutron-rich nuclei
- the large fluctuation in isospin (abrasion) and excitation energy (ablation) give access to **cold fragmentation** processes where neutron-rich nuclei are produced.

**The Hispalensis Lectures on Nuclear Physics** Jose Miguel Arias, Manuel Lozano, 2004-11-23 Powerful new techniques including heavy ion and exotic beams are pushing the frontiers of nuclear physics and opening up a wealth of new fields of research After introductory chapters on theoretical and experimental aspects of nuclear collisions and beams Exotic Nuclear Physics offers articles by experienced lecturers on forefront topics in nuclear physics such as the conquest of the neutron and the proton drip lines nuclear astrophysics the equation of state of hypernuclear matter nuclear supersymmetry and chaotic motion in nuclei This volume continues the successful tradition of published lecture notes from the Hispalensis International Summer School It will benefit graduate students and lecturers in search of advanced material for self study and courses as well as researchers in search of a modern and comprehensive source of reference *Subatomic Physics (3rd Edition)*

**Handbook of Nuclear Physics** Isao Tanihata, Hiroshi Toki, Toshitaka Kajino, 2023-09-04 This handbook is a comprehensive systematic source of modern nuclear physics It aims to summarize experimental and theoretical discoveries and an understanding of unstable nuclei and their exotic structures which were opened up by the development of radioactive ion RI beam in the late 1980s The handbook comprises three major parts In the first part the experiments and measured facts are well organized and reviewed The second part summarizes recognized theories to explain the experimental facts introduced in the first part Reflecting recent synergistic progress involving both experiment and theory the chapters both parts are mutually related The last part focuses on cosmo nuclear physics one of the mainstream subjects in modern nuclear physics Those comprehensive topics are presented concisely Supported by introductory reviews all chapters are designed to present their topics in a manner accessible to readers at the graduate level The book therefore serves as a valuable source for beginners as well helping them to learn modern nuclear physics

**An Advanced Course in Modern Nuclear Physics** J.M. Arias, M. Lozano, 2008-01-11 The field of nuclear physics is entering the 21st century in an interesting and exciting way On the one hand it is changing qualitatively since new experimental developments allow us to direct radioactive and other exotic probes to target nuclei as well as to spark extremely energetic nuclear collisions In parallel detector systems are of an impressive sophistication It is difficult to envisage all the discoveries that will be made in the near future On the other hand the applications of nuclear science and technology are broadening the limits in medicine industry art archaeology and the environmental sciences etc This implies that the public perception of our field is changing smoothly but drastically in contrast to former times where nuclear weapons and nuclear power plants were the dominant applications perceived by citizens Both aspects scientific dynamism and popular recognition should lead the field to an unexpected revival One of the consequences of the former could be that many brilliant students consider nuclear physics as an excellent field in which to acquire professional expertise

Therefore one of the challenges of the international nuclear physics community is to try to make the field attractive. That means simply being pedagogic and enthusiastic. Thus as organisers of an already established summer school our contribution was to put an emphasis in this session on pedagogy and enthusiasm.

**NASA Technical Translation**, 1971 **Atomic Masses and Fundamental Constants 4** J. Sanders, 2012-12-06

The Conference on Nuclear Masses and their Determination which was held at the Max Planck Institute in Mainz from 10 to 12 July 1956 resulted in the formation by the International Union of Pure and Applied Physics of a Commission on Atomic Masses and Related Constants. Under the auspices of this Commission conferences covering these subjects were held in Hamilton Ontario 12-16 September 1960, in Vienna 15-19 July 1963 and in Winnipeg 28 August-1 September 1967. After the last of these conferences the Commission felt that the position regarding nuclear masses was reasonably good and that as a consequence the fundamental constants should get more emphasis in future conferences. For this reason they were very pleased to accept an offer from the National Physical Laboratory to accept the main burden of organizing the Fourth International Conference on Atomic Masses and Fundamental Constants. An Organizing Committee was appointed with the members J. H. Sanders Chairman, B. W. Petley Secretary, A. Horsfield Treasurer, P. Dean, A. H. Wapstra. They were assisted by a Program Committee consisting of A. H. Wapstra Chairman, E. R. Cohen, A. Horsfield, W. H. Johnson Jr, J. H. Sanders, J. Terrien.
