Nucleic Acids and Related Compounds Ante M. Krstulović, Gunter Zweig, Joseph Sherma, 1987 *Nucleic Acids and Protein Synthesis, Part G* Kivie Moldave, Lawrence Grossman, 1979-04-28 The critically acclaimed laboratory standard *Methods in Enzymology* is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike The series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences *Biochemistry* David E. Metzler, 2001-04-25 The most comprehensive textbook reference ever to cover the chemical basis of life the Green Bible of Biochemistry has been a well respected contribution to the field for more than twenty years The complex structures that make up cells are described in detail along with the forces that hold them together and the chemical reactions that allow for recognition signaling and movement There is ample information on the human body its genome and the action of muscles eyes and the brain The complete set deals with the natural world treating the metabolism of bacteria toxins antibiotics specialized compounds made by plants photosynthesis luminescence of fireflies among many other topics The most comprehensive biochemistry text reference available on the market Organized into two volumes comprising 32 chapters and containing the latest research in the field Biological content is emphasized for example macromolecular structures and enzyme action are discussed *Biochemistry* David Metzler, 2012-12-02 Biochemistry The Chemical Reactions of Living Cells is a 16 chapter reference source on chemical structures and reactions of living cells The first three chapters of this book contain introductory material on cell structure molecular architecture and energetic The subsequent chapters examine the allosteric effect of the binding structures of oligomeric enzymes microtubules viruses and muscle These chapters also describe the structures and chemical properties of membranes and of the surrounding cell coats The discussions then shift to the general properties of enzymes the kinetics of chemical reactions and the various mechanisms employed in enzymatic catalysis Considerable chapters are devoted to the reaction sequences found in metabolism These chapters particularly examine the carbohydrate and lipid metabolism photosynthesis and biosynthesis and catabolism of an enormous number of nitrogenous compounds The final chapters highlight the genetic and hormonal control of metabolism development and brain function Biochemistry teachers and students will find this book of great value **Chemical Mutagens** Alexander Hollaender, 2012-12-06 As editor I want especially to thank Dr Ernst Freese for helpful co operation in preparing these volumes and to express my appreciatlOn to Drs Kurt Hirschhorn and Marvin Legator the other members of the editorial board Alexander Hollaender January 1971 Preface The purpose of these volumes is to encourage the development and application of testing and monitoring procedures to avert significant human exposure to mutagenic agents The need for protection against exposure to possibly mutagenic chemicals is only now coming to be generally realized The recently issued Report of the Secretary s Commission on Pesticides and Their Possible Effects on Health the Mrak Report U S Department of

Health Education and Welfare December 1969 has made an important start Its Panel on Mutagenicity recommends that all currently used pesticides be tested for mutagenicity in several recently developed and relatively simple systems Whether recommendations such as these are actually put into effect will depend on convincing government industry and the public that the problem is important that the proposed tests would be effective and that they can be conducted at a cost that is not prohibitive Why is it important to screen environmental agents for mutagenic activity To those who will read this book the answer is self evident The sine qua non of all that we value and all that we are is our genetic heritage

CRC Handbook of Chromatography ,1984 **Handbook of Biochemistry** Gerald D Fasman,2019-08-08 This volume contains information on the nucleotide composition of bacterial DNA Eukaryotic protists etc Nearest neighbour frequencies in DNA repeated and unique sequences in eukaryotes nucleic acid sequences in bacteriophage chloroplasts mitochondria kinetoplasts satellites and TRNA Information on the physical properties of RNA atomic coordinates of DNA DNA Also included in this volume is information on enzymes involved in nucleic acid function

Environmental Health Perspectives ,1993 **Methods of Enzymatic analysis V4** Hans-Ulrich Bergmeyer,2012-12-02 Methods of Enzymatic Analysis Volume 4 reviews developments in the use of enzymes as tools in analytical biochemistry including advances in assay techniques It discusses the principles and methods for the elucidation of structures of enzymes such as peptides proteins amino acids fatty acid metabolites lipids steroids nucleic acids purines pyrimidines nucleosides and coenzymes It also considers the isolation and characterization of active centers in enzymes This volume is divided into four parts each discussing a group of enzymes and their determination Part I focuses on proteins peptides and amino acids including amines and amides Part II is concerned with fatty acid metabolites lipids and steroids ranging from polyunsaturated fatty acids and lecithin to choline acetylcholine triglycerides glycerol acetoacetate triacetate fumarylacetoacetate 20 ketosteroids prostaglandins bile acids and cholesterol Part III discusses nucleic acids purines pyrimidines nucleosides coenzymes and related compounds whereas Part IV looks at other substrates and effectors such as inorganic phosphate The book concludes with a chapter on metabolites and their concentrations in animal tissues Biochemists as well as students and researchers working in the field of analytical biochemistry will find this book highly informative

Enzymes of Nucleic Acid Synthesis and Modification Samson T. Jacob,2018-01-18 The First volume gives an overview of the enzymes involved in DNA synthesis and modification the second volume deals with the RNA enzymes Although the major emphasis of the book is on eukaryotic enzymes a separate chapter dealing with prokaryotic DNA repair enzymes has been included to discuss the major advances in this field in recent years There are two separate chapters on RNA polymerases to provide a comprehensive coverage of the enzymes from lower eukaryotes plants and higher eukaryotes

The Enzyme Reference Daniel L. Purich,R. Donald Allison,2003-01-04 The aim of this work is to provide a fuller spectrum of information in a single source on enzyme catalyzed reactions than is currently available in any published reference work or as part of any Internet database The Enzyme Reference A Comprehensive

Guidebook to Enzyme Nomenclature Reactions and Methods includes 20 000 review articles and seminal research papers Additionally it provides a novel treatment of so called ATPase and GTPase reactions to account for the noncovalent substratelike and productlike states of molecular motors elongation factors transporters DNA helicases G regulatory proteins and other energases Includes a compendium of over 6 000 enzyme reactions including enzyme commission numbers alternative names substrates products alternative substrates and properties Covers over 900 chemical structures of key metabolites and cofactors Index directs readers to the exact pages for over 9 500 enzyme names Methods in Cell Biology,1974-03-11 Methods in Cell Biology Partitioning In Aqueous Two - Phase System Harry Walter,2012-12-02 Partitioning in Aqueous Two Phase Systems Theory Methods Uses and Applications to Biotechnology is a collection of papers that discusses the applications of aqueous two phase systems to problems of separation and extraction of macromolecules organelles and cells Papers focus on the theoretical basis and the practical details of the procedures used Some of the papers describe in one or a few steps how two components can be separated by the investigator manipulating their partitions so that one component is in one phase and the other component is in the other phase or at the interface Investigators can also avail of developed batch extractions for plant organelles cell membranes nucleic acids and proteins The book cites as an example the partitioning of right side out and inside out vesicles obtained from fragments of thylakoid membranes to the top and bottom phases respectively of a Dx PEG system Other papers describe the use of the countercurrent distribution when single extraction steps are not sufficient to produce a separation in materials that do not differ greatly in their partitioning behavior The collection can prove valuable for bio chemists cellular biologists micro biologists and developmental biologists

Protein Biosynthesis in Bacterial Systems Allen I. Laskin,1971 *The biochemistry of the Nucleic Acids* J.N. Davidson,2012-12-02 The Biochemistry of the Nucleic Acids provides an elementary outline of the main biochemical features of nucleic acids and nucleoproteins The book describes the occurrence and biological functions of nucleic acids their chemical constituents and catabolism This text is organized into 14 chapters and begins with a historical overview from the discovery of the nucleic acids to their isolation and characterization The discussion then shifts to bacterial transforming factors and transduction phenomena along with the genetic function and metabolic stability of DNA the chemical composition of the cell nucleus and the Feulgen nucleal reaction The reader is methodically introduced to the structure and biosynthesis of RNA and DNA nucleic acids found in viruses and biosynthesis of mononucleotides An account of nucleases and related enzymes is also given A chapter on the precise mechanism by which nucleic acids are broken down in the cell concludes the book This book is intended for students of biochemistry chemists and biologists **Canadian Journal of Biochemistry**,1979 **Marihuana Biological Effects** Gabriel G.
