Nucleosides And Nucleotides As Antitumor And Antiviral Agents:

Nucleosides and Nucleotides as Antitumor and Antiviral Agents D.C. Baker, C.K. Chu, 2013-11-11 Due to the worldwide epidemic of acquired immunodeficiency syndrome AIDS the past ten years have witnessed a flurry of activity in the chemotherapy of viral diseases Unprecedented scientific efforts have been made by scientists and clinicians to combat infections of human immunodeficiency virus HIY the causative agent Looking back over the past ten years we have made remarkable progress toward the treatment of the viral disease isolation of HIV only two years after the identification of the disease plus major strides in the areas of the molecular biology and virology of the retrovirus etc More remarkably the discovery of the chemotherapeutic agent AZT Retrovir was made within two years after the isolation and identification of the virus followed by unprecedented drug development efforts to culminate in the FDA approval of AZT in twenty three months which was a record breaking time for approval of any drug for a major disease The last six to seven years have particularly been an exciting and productive period for nucleoside chemists Since the activity of AZI was established in 1985 nucleoside chemists have had golden opportunities to discover additional anti HIV nucleosides which are hoped to be less toxic and more effective than AZT and the opportunity continues As we all are aware AZT possesses extremely potent anti HIY activity and no other nucleoside or non nucleoside has surpassed the potency of AZT in vitro **Recent Advances in Nucleosides:**

Chemistry and Chemotherapy C.K. Chu, 2002-09-11 The book covers up to date information on nucleosides and antiviral chemotherapy contributed by the world experts in the field of nucleoside This book is the result of a meeting honoring Dr Jack J Fox who was one of the pioneers in nucleoside chemistry and chemotherapy This book consists of 15 excellent chapters in the area which include topics from recent synthetic methodologies nucleoside kinase implicated in chemotherapy and drug design excellent reviews on antiviral agents nucleoside metabolism mode of action in parasites new compounds under clinical and pre clinical trials IMPDH inhibitors to review on nucleoside prodrugs **Biomedical Index to PHS-supported**

Research ,1991 **Playback and Studies of Animal Communication** Peter K. McGregor, 1992-04-30 Playback is the technique of rebroadcasting natural or synthetic signals to animals and observing their response The ability to present a putative signal in isolation without the potential confounding effects of other activities of the signaller is the main reason for the depth and range of our knowledge of communication systems To date playback of sound signals has predominated but playback of electric signals and even video playback of visual signals suggests that playback will become just as prevalent in studies of communication in other sensory modalities This book is one of the outcomes of a workshop on playback held at Thombridge Hall in the Peak District National Park England during August 1991 There were two reasons for organising the workshop First the considerable and lively debate in the literature about the design and analysis of playback experiments the pseudoreplication debate was in danger of generating more heat than light A workshop forum seemed the obvious place to clarify and if possible resolve the debate Second with the number of new playback and analysis techniques increasing rapidly

it seemed an opportune moment to discuss these techniques and to review some rapidly developing areas of interest in sound communication **Biomedical Index to PHS-supported Research: pt. A. Subject access A-H**, 1992 *Biocatalysis in*

people living in Africa Compiled by leading African and international experts this book presents the science and strategies of modern drug discovery It explores how the use of natural products and traditional medicines can benefit from conventional drug discovery approaches and proposes solutions to current technological infrastructural human resources and economic challenges which are presented when attempting to engage in full scale drug discovery Topics addressed are varied from African medicinal plants to marine bioprospecting pharmacogenetics and the use of nanotechnology This book brings together for the first time a collection of strategies and techniques that need to be considered when developing drugs in an African setting It is an unprecedented and truly international effort highlighting the remarkable effort made so far in the area of drug discovery research by African scientists and scientists from other parts of the world working on African health problems

Anticancer Drug Discovery and Development: Natural Products and New Molecular Models Frederick A. Valeriote, Thomas H. Corbett, Laurence H. Baker, 2012-12-06 With the publication of these proceedings from the Second Drug Discovery and Development Symposium this forum has become the main mechanism for bringing together the principal groups involved in both discovering and developing new approaches to the treatment of cancer This Second Symposium emphasized the types of materials being discovered and their therapeutic activity This is especially evident in the natural product discovery programs where unique and active structures are being identified The major contributors to the meeting were the investigators participating in the National Cooperative Natural Products Drug Discovery Groups NC NP DDG These groups reflect an association among researchers at universities or cancer centers pharmaceutical companies and the National Cancer Institute Their sources of materials are varied reflecting chemical inventories of pharmaceutical companies organic synthetic compounds from the laboratory cytotoxics as well as biologics and their hybrids and natural products obtained from plants marine organisms and microorganisms The models employed in the discovery systems vary from broadly cellular based to specific enzymes to defined cellular functions Each of them is believed important to the malignant state and will allow for the discovery of compounds which will have efficacy in cancer therapy The goal of the participants is both to discover new anticancer agents and to develop them as efficiently as possible into clinically useful additions to treatment Of importance is the fact that there are a number of promising leads which will soon be moving into the clinic thereby testing the effectiveness of this NC NP DDG approach
