Planning Latin America's Capital Cities, 1850-1950 Arturo Almundoz Marte, 2002 In this first comprehensive work in English to describe the building of Latin America's capital cities in the postcolonial period Arturo Almundoz and his contributors demonstrate how Europe and France in particular shaped their culture architecture and planning until the United States began to play a part in the 1930s The book provides a new perspective on international planning **The Metropolis in Latin America, 1830-1930** Idurre Alonso, Maristella Casciato, 2021-08-17 This volume

examines the unprecedented growth of several cities in Latin America from 1830 to 1930 observing how sociopolitical changes and upheavals created the conditions for the birth of the metropolis In the century between 1830 and 1930 following independence from Spain and Portugal major cities in Latin America experienced large scale growth with the development of a new urban bourgeois elite interested in projects of modernization and rapid industrialization At the same time the lower classes were eradicated from old city districts and deported to the outskirts The Metropolis in Latin America 1830-1930 surveys this expansion focusing on six capital cities Havana Mexico City Rio de Janeiro Buenos Aires Santiago de Chile and Lima as it examines sociopolitical histories town planning art and architecture photography and film in relation to the metropolis Drawing from the Getty Research Institute's vast collection of books prints and photographs from this period largely unpublished until now this volume reveals the cities changes through urban panoramas plans depicting new neighborhoods and photographs of novel transportation systems public amenities civic spaces and more It illustrates the transformation of colonial cities into the monumental modern metropolises that by the end of the 1920s provided fertile ground for the emergence of today's Latin American megalopolis *Anuario estadístico de la ciudad de Buenos Aires* Buenos Aires (Argentina). Dirección General de Estadística Municipal, 1915 *Censo general de población, edificación, comercio e industrias de la ciudad de Buenos Aires ...* Buenos Aires (Argentina). century modernization and development are closely related to nineteenth century ideals of progress and civilization and for this reason Almundoz opens with a brief review of that legacy for the different countries that are the focus of his book Mexico Chile Brazil Argentina and Venezuela but with references to others He then explores the regional distortions which resulted from the interaction between industrialization and urbanization and how the imbalance between urbanization and the productive system helps to explain why take off was not followed by the drive to maturity in Latin American countries He suggests that the close yet troublesome relationship with the United States the recurrence of dictatorships and autocratic regimes and Marxist influences in many domains are all factors that explain Latin America s stagnation and underdevelopment up to the so called lost decade of 1980s He shows how Latin America s fate changed in the late twentieth and early twenty first century when neoliberal programmes political compromise and constitutional reform dismantled the traditional model of the corporate state and centralized planning He reveals how economic growth and social improvements have been attained by politically left wing yet economically open market countries while others have resumed populism and state intervention All these trends make up the complex scenario for the new century especially when considered against the background of vibrant metropolises that are the main actors in the book

Eugenics in the Garden

Fabiola López-Durán, 2018-03-01 Winner Robert Motherwell Book Award Outstanding Book on Modernism in the Arts The Dedalus Foundation 2019 As Latin American elites strove to modernize their cities at the turn of the twentieth century they eagerly adopted the eugenic theory that improvements to the physical environment would lead to improvements in the human race Based on Jean Baptiste Lamarck s theory of the inheritance of acquired characteristics this strain of eugenics empowered a utopian project that made race gender class and the built environment the critical instruments of modernity and progress Through a transnational and interdisciplinary lens Eugenics in the Garden reveals how eugenics fueled by a fear of social degeneration in France spread from the realms of medical science to architecture and urban planning becoming a critical instrument in the crafting of modernity in the new Latin world Journeying back and forth between France Brazil and Argentina Fabiola López Durán uncovers the complicity of physicians and architects on both sides of the Atlantic who participated in a global strategy of social engineering legitimized by the authority of science In doing so she reveals the ideological trajectory of one of the most celebrated architects of the twentieth century Le Corbusier who deployed architecture in what he saw as the perfecting and whitening of man The first in depth interrogation of eugenics influence on the construction of the modern built environment Eugenics in the Garden convincingly demonstrates that race was the main tool in the geopolitics of space and that racism was and remains an ideology of progress

Gustavo Arteaga Botero, 2021-08-12 Pensar la ciudad es un acto que contiene numerosas dimensiones dimensiones t cnicas culturales sociales y de todo tipo Tal vez podr amos decir con ms precis n que pensar la ciudad es pensar un rgimen de sentido rgimen que es a su vez su propia materialidad visto as no ser a la ciudad el escenario de la vida sino que al mismo tiempo ser a la vida la que hace ciudad Por eso pensar la ciudad no es el mero acto

anal tico de causa y efecto sino que consiste en meterse en el indeterminado espacio donde la vida misma va construyendo mundo material Es un pensamiento que excede al pensamiento t cnico y aunque no lo reemplaza es condici n indispensable para ser pensamiento proyectual El Trabajo de Gustavo Arteaga Botero incursiona en esas dimensiones anal ticas t cnicas econ micas culturales con suma rigurosidad pero especialmente aborda un campo de indeterminaci n a partir de someter el proyecto y el pensamiento a conceptos imprecisos que requieren ser trabajados como el de espacios h bridos territorios vagos espacios con posibilidad de ser aprovechados capturados por y para la vida urbana Pero no se trata de meras abstracciones sino de incursionar desde el proyecto en un mundo de posibilidades de entender que el proyecto no es una mera respuesta a un problema sino que adem s es un acto de apertura a nuevos possibles a nuevos modos de apropiaci n humana del espacio para hacerlo habitable El texto que tiene la forma de tesis esa es su g nesis pero a su vez abre y aporta al campo del proyecto y al pensamiento urbano es desde este punto de vista una intervenci n muy valiosa para nuestro campo
