dimensional data and numerical methods this is an ideal publication for programmers researchers students and practitioners  
interested in emerging methods in object modeling and contour reconstruction     **Visualization and Verbalization of**  
**Data** Jorg Blasius, Michael Greenacre, 2014-04-10 Visualization and Verbalization of Data shows how correspondence analysis  
and related techniques enable the display of data in graphical form which results in the verbalization of the structures in data  
Renowned researchers in the field trace the history of these techniques and cover their current applications The first part of  
the book explains the historical origins of correspondence analysis and associated methods The second part concentrates on  
the contributions made by the school of Jean Paul Benz cri and related movements such as social space and geometric data  
analysis Although these topics are viewed from a French perspective the book makes them understandable to an  
international audience Throughout the text well known experts illustrate the use of the methods in practice Examples include  
the spatial visualization of multivariate data cluster analysis in computer science the transformation of a textual data set into  
numerical data the use of quantitative and qualitative variables in multiple factor analysis different possibilities of recoding  
data prior to visualization and the application of duality diagram theory to the analysis of a contingency table     **Selected**
