Fishwick, 2007-06-01 The topic of dynamic models tends to be splintered across various disciplines making it difficult to uniformly study the subject Moreover the models have a variety of representations from traditional mathematical notations to diagrammatic and immersive depictions Collecting all of these expressions of dynamic models the Handbook of Dynamic Sy Quarterly Bibliography of Computers and Data Processing , 1976 The Cable and Telecommunications Professionals' Reference Goff Hill, 2012-07-26 This book is for any telecommunications convergence professional who needs to understand the structure of the industry the structure of telephony networks and services and the equipment involved With the growing variety of networks and technologies now on offer it is inevitable that some convergence will take place between different networks services and products New VOIP voice over internet protocol networks must interwork with traditional networks For instance mobile phones can offer data services wireless broadband connections to laptops will allow VOIP phone calls away from base users could have the option of convergent phones that can be used on a landline when at home or business but which can be used as a mobile when on the move and so on **Decision Making in Service Industries** Javier Faulin, Angel A. Juan, Scott E. Grasman, Michael J. Fry, 2012-08-08 In real life scenarios service management involves complex decision making processes usually affected by random or stochastic variables Under such uncertain conditions the development and use of robust and flexible strategies algorithms and methods can provide the quantitative information necessary to make better business decisions Decision Making in Service Industries A Practical Approach explores the challenges that must be faced to provide intelligent strategies for efficient management and decision

making that will increase your organization's competitiveness and profitability. The book provides insight and understanding into practical and methodological issues related to decision making processes under uncertainty in service industries. It examines current and future trends regarding how these decision making processes can be efficiently performed for better design of service systems by using probabilistic algorithms as well as hybrid and simulation based approaches. Traditionally many quantitative tools have been developed to make decisions in production companies. This book explores how to use these tools for making decisions inside service industries. Thus the authors tackle strategic, tactical and operational problems in service companies with the help of suitable quantitative models such as heuristic and metaheuristic algorithms, simulation or queuing theory. Generally speaking, decision making is a hard task in business fields. Making the issue more complex, most service companies' problems are related to the uncertainty of the service demand. This book sheds light on these types of decision problems. It provides studies that demonstrate the suitability of quantitative methods to make the right decisions. Consequently, this book presents the business analytics needed to make strategic decisions in service industries.

Machine Learning for Adaptive Many-Core Machines - A Practical Approach Noel Lopes, Bernardete Ribeiro, 2014-06-28. The overwhelming data produced everyday and the increasing performance and cost requirements of applications are transversal to a wide range of activities in society from science to industry. In particular, the magnitude and complexity of the tasks that Machine Learning (ML) algorithms have to solve are driving the need to devise adaptive many core machines that scale well with the volume of data or in other words can handle Big Data. This book gives a concise view on how to extend the applicability of well known ML algorithms in Graphics Processing Unit (GPU) with data scalability in mind. It presents a series of new techniques to enhance scale and distribute data in a Big Learning framework. It is not intended to be a comprehensive survey of the state of the art of the whole field of machine learning for Big Data. Its purpose is less ambitious and more practical to explain and illustrate existing and novel GPU based ML algorithms not viewed as a universal solution for the Big Data challenges but rather as part of the answer which may require the use of different strategies coupled together.
