Proceedings of the London Mathematical Society London Mathematical Society, 1926 Papers presented to J E Littlewood on his 80th birthday issued as 3d ser v 14 A 1965 **AN ESSAY ON THE MATHEMATICAL METHODS OF THEORY OF GENERAL RELATIVITY** Edoardo Confalonieri, 2019-01-21 The basic concepts of a method for a general integral of the Field Equations of the Theory of General Relativity are outlined An extended and revised version is currently in preparation and it will be uploaded as soon as ready for publication **Markov's Theorem and 100 Years of the Uniqueness Conjecture** Martin Aigner, 2013-07-18 This book takes the reader on a mathematical journey from a number theoretic point of view to the realm of Markov's theorem and the uniqueness conjecture gradually unfolding many beautiful connections until everything falls into place in the proof of Markov's theorem What makes the Markov theme so attractive is that it appears in an astounding variety of different fields from number theory to combinatorics from classical groups and geometry to the world of graphs and words On the way there are also introductory forays into some fascinating topics that do not belong to the standard curriculum such as Farey fractions modular and free groups hyperbolic planes and algebraic words The book closes with a discussion of the current state of knowledge about the uniqueness conjecture which remains an open challenge to this day All the material should be accessible to upper level undergraduates with some background in number theory and anything beyond this level is fully explained in the text This is not a monograph in the usual sense concentrating on a specific topic Instead it narrates in five parts Numbers Trees Groups Words Finale the story of a discovery in one field and its many manifestations in others as a tribute to a great mathematical achievement and as an intellectual pleasure contemplating the marvellous unity of all mathematics **Mathematische Annalen** Alfred Clebsch, Carl Neumann, Felix Klein, Adolph Mayer, David Hilbert, Otto Blumenthal, Albert Einstein, Constantin Carathéodory, Erich Hecke, Bartel Leendert Waerden, Heinrich Behnke, 1921 Publishes original contributions from the entire field of mathematics **Mathematische Annalen**, 1898 *Ernst Zermelo - Collected Works/Gesammelte Werke* Ernst Zermelo, 2010-01-20 Ernst Zermelo 1871 1953 is regarded as the founder of axiomatic set theory and best known for the first formulation of the axiom of choice However his papers include also pioneering work in applied mathematics and mathematical physics This edition of his collected papers will consist of two volumes Besides providing a biography the present Volume I covers set theory the foundations of mathematics and pure mathematics and is supplemented by selected items from his Nachlass and part of his translations of Homer's Odyssey Volume II will contain his work in the calculus of variations applied mathematics and physics The papers are each presented in their original language together with an English translation the versions facing each other on opposite pages Each paper or coherent group of papers is preceded by an introductory note provided by an acknowledged expert in the field which comments on the historical background motivations accomplishments and influence **The Emergence of the American Mathematical Research Community, 1876-1900** Karen Hunger Parshall, David E. Rowe, 1994 This volume traces the

transformation of the United States from a mathematical backwater to a major presence during the quarter century from 1876 to 1900 Presenting a detailed study of the major figures involved in this transformation it focuses on the three most influential individuals the British algebraist James Joseph Sylvester the German standard bearer Felix Klein and the American mathematician Eliakim Hastings Moore and on the principal institutions with which they were associated the Johns Hopkins University Gottingen University and the University of Chicago This book further analyzes the research traditions these men and their institutions represented the impact they had on the second generation of American mathematical researchers and the role of the American Mathematical Society in these developments This is the first work ever written on the history of American mathematics during this period and one of the few books that examines the historical development of American mathematics from a wide perspective By placing the development of American mathematics within the context of broader external factors affecting historical events the authors show how the character of American research was decisively affected by the surrounding scientific educational and social contexts of the period Aimed at a general mathematical audience and at historians of science this book contains an abundance of unpublished archival material numerous rare photographs and an extensive bibliography

Topics in Differential Geometry Peter W. Michor,2008 This book treats the fundamentals of differential geometry manifolds flows Lie groups and their actions invariant theory differential forms and de Rham cohomology bundles and connections Riemann manifolds isometric actions and symplectic and Poisson geometry It gives the careful reader working knowledge in a wide range of topics of modern coordinate free differential geometry in not too many pages A prerequisite for using this book is a good knowledge of undergraduate analysis and linear algebra

Boolean Functions and Computation Models Peter Clote,Evangelos Kranakis,2013-03-09 The foundations of computational complexity theory go back to Alan Thring in the 1930s who was concerned with the existence of automatic procedures deciding the validity of mathematical statements The first example of such a problem was the undecidability of the Halting Problem which is essentially the question of debugging a computer program Will a given program eventu ally halt Computational complexity today addresses the quantitative aspects of the solutions obtained Is the problem to be solved tractable But how does one measure the intractability of computation Several ideas were proposed A Cobham Cob65 raised the question of what is the right model in order to measure a computation step M Rabin Rab60 proposed the introduction of axioms that a complexity measure should satisfy and C Shannon Sha49 suggested the boolean circuit that computes a boolean function However an important question remains What is the nature of computa tion In 1957 John von Neumann vN58 wrote in his notes for the Silliman Lectures concerning the nature of computation and the human brain that logics and statistics should be primarily although not exclusively viewed as the basic tools of information theory Also that body of experience which has grown up around the planning evaluating and coding of complicated logical and mathematical automata will be the focus of much of

this information theory The most typical but not the only such automata are of course the large electronic computing machines American Journal of Mathematics ,1919 The American Journal of Mathematics publishes research papers and articles of broad appeal covering the major areas of contemporary mathematics **Variational Principles of Continuum Mechanics** Victor Berdichevsky,2009-09-18 The book reviews the two features of the variational approach its use as a universal tool to describe physical phenomena and as a source for qualitative and quantitative methods of studying particular problems Berdichevsky s work differs from other books on the subject in focusing mostly on the physical origin of variational principles as well as establishing their interrelations For example the Gibbs principles appear as a consequence of the Einstein formula for thermodynamic fluctuations rather than as the first principles of the theory of thermodynamic equilibrium Mathematical issues are considered as long as they shed light on the physical outcomes and or provide a useful technique for the direct study of variational problems In addition a thorough account of variational principles discovered in various branches of continuum mechanics is given This book the second volume describes how the variational approach can be applied to constructing models of continuum media such as the theory of elastic plates shells and beams shallow water theory heterogeneous mixtures granular materials and turbulence It goes on to apply the variational approach to asymptotical analysis of problems with small parameters such as the derivation of the theory of elastic plates shells and beams from three dimensional elasticity theory and the basics of homogenization theory A theory of stochastic variational problems is considered in detail too along with applications to the homogenization of continua with random microstructures

The Eightfold Way Silvio Levy,2001-05-28 Expository and research articles by renowned mathematicians on the myriad properties of the Klein quartic *Annales scientifiques de l'Ecole Normale Supérieure* ,1891 *Annales Scientifiques de L'École Normale Supérieure* ,1891 **Annales Scientifiques de L'École Normale Supérieure** École normale supérieure (France),1891 *From Groups to Categorical Algebra* Dominique Bourn,2017-06-13 This book gives a thorough and entirely self contained in depth introduction to a specific approach to group theory in a large sense of that word The focus lie on the relationships which a group may have with other groups via universal properties a view on that group from the outside This method of categorical algebra is actually not limited to the study of groups alone but applies equally well to other similar categories of algebraic objects By introducing protomodular categories and Mal tsev categories which form a larger class the structural properties of the category $\mathbf{Grp}$ of groups show how they emerge from four very basic observations about the algebraic litteral calculus and how studied for themselves at the conceptual categorical level they lead to the main striking features of the category $\mathbf{Grp}$ of groups Hardly any previous knowledge of category theory is assumed and just a little experience with standard algebraic structures such as groups and monoids Examples and exercises help understanding the basic definitions and results throughout the text **Springer-Verlag: History of a Scientific Publishing House** Heinz Sarkowski,Heinz Götze,1996-10-07 A chronicle written only by someone for whom the present important Goethe Maximen

und Reflexionen The second volume of our company's history differs from the first in several ways With a great appreciation of history Heinz Sarkowski has impressively reconstructed the company correspondence which is fortunately almost completely preserved and made it speak There is an inexhaustible amount of correspondence pertaining to the period I have taken it upon myself to cover and working through it properly not only would have required many years but also would have detracted from the immediacy of the account Thus I decided to proceed from personal experience to describe what has happened and to provide details gleaned from the correspondence I have counted here by no means only my own but rather the personal experiences of the many company members and employees who are mentioned below With the founding of the New York firm developments branch out becoming parallel but separate and the change from one scene to another repeatedly interrupts the continuing course of events and the chronological flow of the report In this connection the occasional repetition of certain facts was avoidable In some places however it seemed more appropriate not to interrupt particular lines of development but to describe them in continuity without regard to specific periods of time

Hopf Algebras and Tensor Categories Nicolás Andruskiewitsch, Juan Cuadra, Blas Torrecillas, 2013-02-21 This volume contains the proceedings of the Conference on Hopf Algebras and Tensor Categories held July 4-8 2011 at the University of Almería Almería Spain The articles in this volume cover a wide variety of topics related to the theory of Hopf algebras and its connections to other areas of mathematics In particular this volume contains a survey covering aspects of the classification of fusion categories using Morita equivalence methods a long comprehensive introduction to Hopf algebras in the category of species and a summary of the status to date of the classification of Hopf algebras of dimensions up to 100 Among other topics discussed in this volume are a study of normalized class sum and generalized character table for semisimple Hopf algebras a contribution to the classification program of finite dimensional pointed Hopf algebras relations to the conjecture of De Concini Kac and Procesi on representations of quantum groups at roots of unity a categorical approach to the Drinfeld double of a braided Hopf algebra via Hopf monads an overview of Hom Hopf algebras and several discussions on the crossed product construction in different settings

The Selected Correspondence of L.E.J. Brouwer Dirk von Dalen, 2011-07-25 L E J Brouwer 1881-1966 is best known for his revolutionary ideas on topology and foundations of mathematics intuitionism The present collection contains a mixture of letters university and faculty correspondence has been included some of which shed light on the student years and in particular on the exchange of letters with his PhD adviser Korteweg Acting as the natural sequel to the publication of Brouwer's biography this book provides instrumental reading for those wishing to gain a deeper understanding of Brouwer and his role in the twentieth century Striking a good balance of biographical and scientific information the latter deals with innovations in topology Cantor-Schoenflies style and the new topology and foundations The topological period in his research is well represented in correspondence with Hilbert Schoenflies Poincaré Blumenthal Lebesgue Baire Koebe and foundational topics are discussed in letters exchanged with Weyl Fraenkel Heyting van Dantzig

and others There is also a large part of correspondence on matters related to the interbellum scientific politics This book will appeal to both graduate students and researchers with an interest in topology the history of mathematics the foundations of mathematics philosophy and general science
