A Methodology for Developing Multimodal User Interfaces of Information Systems Adrian Stanciulescu,2008 The Graphical User Interface GUI as the most prevailing type of User Interface UI in today s interactive applications restricts the interaction with a computer to the visual modality and is therefore not suited for some users e g with limited literacy or typing skills in some circumstances e g while moving around with their hands or eyes busy or when the environment is constrained e g the keyboard and the mouse are not available In order to go beyond the GUI constraints the Multimodal MM UIs appear as paradigm that provide users with great expressive power naturalness and flexibility In this thesis we argue that developing MM UIs combining graphical and vocal modalities is an activity that could benefit from the application of a methodology which is composed of a set of models a method manipulating these models and the tools implementing the method Therefore we define a design space based method that is supported by model to model colored transformations in order to obtain MM UIs of information systems The design space is composed of explicitly defined design options that clarify the development process in a structured way in order to require less design effort The feasibility of the methodology is demonstrated through three case studies with different levels of complexity and coverage In addition an empirical study is conducted with end users in order to measure the relative usability level provided by different design decisions

The Projection Model with Unknown Weight Information under Interval Neutrosophic Environment and Its Application to Software Quality-in-Use Evaluation

Tongjuan Wang, Interval neutrosophic sets INs provide us with a more flexible and effective way to express incomplete indeterminate and inconsistent information epurpose of this paper is to introduce the new multicriteria decision making MCDM method based on the improved projection model under the interval neutrosophic environment In this paper we investigated the basic concepts and operational rules of interval neutrosophic numbers INNs then proposed the projection of two INNs and improved the entropy formula of the INNs Furthermore this paper took account into the decision maker s attitude towards the indeterminacy and risk and proposed two different methods to determine the ideal solutions Based on

this we presented an improved MCDM method based on the projection model under the interval neutrosophic environment. Finally the practicability and reliability of the proposed method were explained by the example of software quality in use evaluation.
