advanced modalities currently used to visualize the human brain and adjacent structures including MRI CT diffusion tensor imaging DTI with tractography functional MRI CTA CTV MRA MRV conventional 2 D catheter angiography 3 D rotational catheter angiography MR spectroscopy and ultrasound of the neonatal brain The vast array of data that these modes of imaging provide offers a wider window into the brain and allows the reader a unique way to integrate the complex anatomy presented Ultimately the improved understanding you can acquire using this atlas can enhance clinical understanding and have a positive impact on patient care Additionally various anatomic structures can be viewed from modality to modality and from multiple planes This state of the art atlas provides a single source reference which allows the interested reader ease of use cross referencing and the ability to visualize high resolution images with detailed labeling It will serve as an authoritative learning tool in the classroom and as an invaluable practical resource at the workstation or in the office or clinic

MRI of the Brain, Head, Neck and Spine Jaap Valk, 2012-12-06 With the growing number of MR installations clinicians and radiologist are being confronted more and more with visual information they do not feel as confident with as with the more mono form information of conventional radiographs CT and US The freedom of parameter choice of the MR operator allows the same object to be depicted in various ways and the contrast in the images to be changed and inverted at will For those not experienced in interpreting MR images this may cause confusion and uncertainty about their diagnostic content This will sometimes lead to an unnecessary retreat to other diagnostic modalities The purpose of this book is to help close the gap between MR operators and readers and clinicians A variety of cases is presented together with the MRI considerations In nearly all these cases confirmation of diagnosis was obtained by histological examination Quite deliberately this book only includes the occasional CT scan or angiography for comparison to avoid the temptation of falling back on other modalities and of escaping from the often more difficult to interpret but in the end more rewarding MR images All the MR images in this book were made with a first generation unsophisticated Teslacon 1 0 6 T superconducting magnet system Hopefully they will reflect the quality of the machine Some people will agree with me that it is sad that investments in expensive health care systems are subject to the whims of those who are mainly interested in satisfying their stockholders
