Molecular Structure by Diffraction Methods G. A. Sim, 1973 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume *A Theoretical Approach to Inorganic Chemistry* A.F. Williams, 2013-11-11 Dr Alan Williams has acquired a considerable experience in work with transition metal complexes at the Universities of Cambridge and Geneva In this book he has tried to avoid the variety of ephemeral and often contradictory rationalisations encountered in this field and has made a careful comparison of modern opinions about chemical bonding In my opinion this effort is fruitful for all students and active scientists in the field of inorganic chemistry The distant relations to group theory atomic spectroscopy and epistemology are brought into daylight when Dr Williams critically and pedagogically compares quantum chemical models such as molecular orbital theory the more specific LCAO description and related ligand field theory the valence bond treatment which has conserved great utility in antiferromagnetic systems with long inter nuclear distances and discusses interesting but not too well defined concepts such as electronegativity also derived from electron transfer spectra hybridisation and oxidation numbers The interdisciplinary approach of the book shows up in the careful consideration given to many experimental techniques such as vibrational infra red and Raman electronic visible and ultraviolet Mossbauer magnetic resonance and photoelectron spectra with data for gaseous and solid samples as well as selected facts about solution chemistry The book could not have been written a few years ago and is likely to remain a highly informative survey
