Fuzzy Quantifiers Ingo Glöckner,2008-08-11 From a linguistic perspective it is quantification which makes all the difference between having no dollars and having a lot of dollars And it is the meaning of the quantifier most which eventually decides if Most Americans voted Kerry or Most Americans voted Bush as it stands Natural language NL quantifiers like all almost all many etc serve an important purpose because they permit us to speak about properties of collections as opposed to describing specific individuals only in technical terms quantifiers are a second order construct Thus the quantifying statement Most Americans voted Bush asserts that the set of voters of George W Bush comprises the majority of Americans while Bush s sneeze only tells us something about a specific individual By describing collections rather than individuals quantifiers extend the expressive power of natural languages far beyond that of propositional logic and make them a universal communication medium Hence language heavily depends on quantifying constructions These often involve fuzzy concepts like tall and they frequently refer to fuzzy quantities in agreement like about ten almost all many etc In order to exploit this expressive power and make fuzzy quantification available to technical applications a number of proposals have been made how to model fuzzy quantifiers in the framework of fuzzy set theory These approaches usually reduce fuzzy quantification to a comparison of scalar or fuzzy cardinalities 197-132
