The Scientific Papers of John Couch Adams John Couch Adams, 1896 *Francotheque: A resource for French studies* Gareth Thomas, 2014-02-25 Francotheque seeks to provide a French language resource for undergraduate students of French. Direct access to contemporary French culture and society is offered through carefully selected authentic texts and a comprehensive overview of France and the French is provided under six broad headings: history, multicultural society, media, the arts, science and technology, the Francophone world. Through press articles, historical documents, photographs, posters, advertisements, statistics, poems and songs, each section starts with an introduction. The authentic texts are accompanied by vocabulary notes and where appropriate explanations filling in cultural background. One of the features of the book is the *sujets de reflexion* which provide pre-reading stimulus, thus suggesting a particular context of focus from which to approach many of the contexts.

Origin and Evolution of the Universe Royal Society of Canada, Canadian Institute for Advanced Research, 1987. Does the universe have the character it has because of design? In this collection of essays first presented at a symposium sponsored by the Canadian Institute for Advanced Research and the Royal Society of Canada, seventeen scientists and philosophers re-examine the Argument by Design in light of current scientific theories. Scientists in such diverse fields as cosmology, physics, geology, biology, and psychology provide syntheses of the state of their respective disciplines with regard to questions such as the origin or evolution of the universe and of life, the interaction of life and terrestrial environment, and verbal communication in prehumans. Contributions by philosophers cover such areas as arguments for a designer and the question of whether nature's laws and initial conditions could be viewed as fine-tuned for the production of life. Many of the chapters demonstrate the awe-inspiring success of modern science in explaining the universe in terms of fairly straightforward natural laws, countering those versions of the design argument which try to find evidence of God's activities in the supposed failures of scientific laws to cover various phenomena.

The influence of diet on endurance and general efficiency Collection,2023-10-23 Experimental study of the physiological needs of the body for food has indicated that the real requirements of the system especially for proteid foods are far below the amounts called for by existing dietary standards and still farther below the customary habits of the majority of mankind The ability of the body to maintain a condition of physiological equilibrium with a true nitrogen balance etc on a relatively small amount of nitrogenous food would seemingly imply that the large surplus so generally consumed constitutes an entirely uncalled for drain upon the system as well as upon the pocket of the individual and without any compensatory gain In our experimental study of this question observations on many individuals have extended over such long periods of time that there is apparently perfect safety in the conclusion that the new dietary standards which aim to conform to the true needs of the body are perfectly adapted to maintain health strength and vigor indefinitely
