B. economics and more With a unique approach Introduction to Combinatorics builds a foundation for problem solving in any of these fields Although combinatorics deals with finite collections of discrete objects and as such differs from continuous mathematics the two areas do interact The author therefore does not hesitate to use methods drawn from continuous mathematics and in fact shows readers the relevance of abstract pure mathematics to real world problems The author has structured his chapters around concrete problems and as he illustrates the solutions the underlying theory emerges His focus is on counting problems beginning with the very straightforward and ending with the complicated problem of counting the number of different graphs with a given number of vertices Its clear accessible style and detailed solutions to many of the exercises from routine to challenging provided at the end of the book make Introduction to Combinatorics ideal for self study as well as for structured coursework

Arms and Artificial Intelligence Stockholm International Peace Research Institute,1987 The impact of information technology in the field of military decision making is superficially less visible than that of a number of other weapon developments though its importance has grown steadily since the beginning of the 1980s Owing to its potential role in modern weapon systems and the prospect of its inclusion as an essential ingredient in many military projects such as the Strategic Defence Initiative it has become the focus of special interest and efforts This book is the first attempt to present a broad overview of the prospects for information technology in general and machine intelligence in particular in the context of international security The dangers and promises of weapon and arms control applications of computers and artificial intelligence to decision making processes are analysed in a technical strategic and political perspective by experts from six different countries In an introductory chapter Allan Din presents a generic overview of artificial intelligence and its prospects Thirteen contributors then discuss the conceptual and technical framework of artificial intelligence analyse implications for weapon systems and strategy and discuss possible applications to arms control verification and modelling

a key role in its representations of race identity and history The insistent inclusion of questions relating to colonialism and power structures in recent children s novels exposes the complexities and contradictions surrounding the fictional treatment of race relations and ethnicity Postcolonial children s literature in Britain has been inherently ambivalent since its cautious beginnings it is both transgressive and authorizing both undercutting and excluding Grzegorzczuk considers the ways in which children s fictions have worked with and against particular ideologies of race The texts analyzed in this collection portray ethnic minorities as complex hybrid products of colonialism global migrations and the ideology of multiculturalism By examining the ideological content of these novels Grzegorzczuk demonstrates the centrality of the colonial past to

Perceptions and Representations Keith

Oatley,2017-03-16 Originally published in 1978 this study examines the shortcomings of some theoretical approaches to psychological and neurophysiological mechanisms at the time Keith Oatley illustrates the extent of these shortcomings by showing how inefficient brain researchers using their present approaches would be in trying to understand a computer which is considerably simpler than the human brain He concludes that we need better theories than those usually espoused in psychology and goes on to expound a theory of cognitive representation and inference in perception which began with Helmholtz more than a hundred years ago but which can now be given substance and formal structure in artificial intelligence programs The author deploys this theory to give an account of some fundamental problems such as how we see a three dimensional world and how the brain copes so well with incomplete sensory data and with damage to its own components
